

# Mullard

## OUTPUT PENTODE

# Pen26

The Pen26 is an indirectly heated output pentode for series heater connection in D.C./A.C. receivers.

### HEATER CHARACTERISTICS

|                         |     |     |                    |
|-------------------------|-----|-----|--------------------|
| Heater Volts            | ... | ... | $V_f = 24.0$ volts |
| Heater Current          | ... | ... | $I_f = 0.2$ amp    |
| Heating Time—60 seconds |     |     |                    |

### DIMENSIONS

|                   |     |           |
|-------------------|-----|-----------|
| Overall Length    | ... | = 123 mm. |
| Overall Diameter  |     | = 46 mm.  |
| Bulb Finish—Clear |     |           |

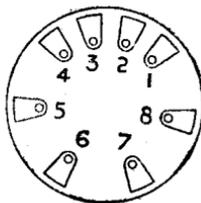

### OPERATING DATA

|   |     |     |             |              |
|---|-----|-----|-------------|--------------|
| Normal Anode Voltage                      | ... | ... | $V_{aw}$    | = 200 volts  |
| Normal Auxiliary Grid Voltage             | ... | ... | $V_{g2w}$   | = 100 volts  |
| Normal Anode Current ( $-V_{g1w} = 19$ V) | ... | ... | $I_{aw}$    | = 40 mA      |
| Auxiliary Grid Current                    | ... | ... | $I_{g2}$    | = 5.0 mA     |
| Normal Control Grid Voltage               | ... | ... | $-V_{g1}$   | = 19 volts   |
| Mutual Conductance                        | ... | ... | $S_w$       | = 3.1 mA/V   |
| Optimum Load ( $V_a = V_{g2} = 250$ V)    | ... | ... | $R_a$       | = 5,000 ohms |
| Audio Output ( $D = 10\%$ Total)          | ... | ... | $W_o$       | = 3.0 watts  |
| Input Signal Volts (R.M.S.)               | ... | ... | $V_{g1eff}$ | = 8.8 volts  |
| Cathode Bias Resistance                   | ... | ... | $R_k$       | = 420 ohms   |

### LIMITS

|   |     |     |             |                      |
|---|-----|-----|-------------|----------------------|
| Maximum Anode Voltage                               | ... | ... | $V_{amax}$  | = 200 volts          |
| Maximum Anode Dissipation                           | ... | ... | $W_{amax}$  | = 8 watts            |
| Maximum Cathode Current                             | ... | ... | $I_{kmax}$  | = 70 mA              |
| Maximum Auxiliary Grid Voltage                      | ... | ... | $V_{g2max}$ | = 100 volts          |
| Maximum Auxiliary Grid Dissipation                  | ... | ... | $W_{g2max}$ | = 1.0 watt           |
| Maximum Resistance in Grid Circuit (with Auto Bias) | ... | ... | $R_{g1max}$ | = 1.0 megohm         |
| Maximum Resistance Heater to Cathode                | ... | ... | $R_{fkmax}$ | = 5,000 ohms         |
| Maximum Voltage Heater to Cathode                   | ... | ... | $V_{fkmax}$ | = 175 volts          |
| Range of Grid Voltage for 1 $\mu$ A Grid Current    | ... | ... | $V_{g1}$    | = -0.4 to -1.1 volts |

### CONNECTIONS

|                                |                          |
|--------------------------------|--------------------------|
| Contact No. 1                  | —                        |
| ” 2                            | Heater                   |
| ” 3                            | Heater                   |
| ” 4                            | Cathode                  |
| ” 5                            | —                        |
| ” 6                            | —                        |
| ” 7                            | Auxiliary Grid ( $G_2$ ) |
| ” 8                            | Anode                    |
| Top Cap—Control Grid ( $G_1$ ) |                          |

Viewed from underside of valve base.
