HIGH VOLTAGE HIGH VACUUM DIODE

DESCRIPTION

The Central 7132/XD-2 is a water cooled hard tube diode specifically designed for rectifier, charging and shunt diode service up to 40Kv peak inverse voltage. The tube design features a special thoria-tungsten filament capable of high peak currents and long life. The external anode allows for high anode dissipation ratings and efficient water cooling through its specially designed integral jacket. The 7132/XD-2 can dissipate 5Kw continuously at a water flow of 3 gpm.
