## POWER TRIODE

### DESCRIPTION

The Nucor tube type 7C25 is a forced-air-cooled general purpose, three electrode tube, specifically designed for industrial and communication applications. The anode is capable of dissipating 2.5 kilowatts. It features a sturdily-supported, double-spiral thoriated tungsten filament. Rugged kovar grid and filament seals insure greater protection against mechanical stress and shock. The wide spacing between elements is an additional feature of this tube. Flexible leads constructed of O.F.H.C. copper can be modified to individual customer requirements.

Full input ratings apply to 30 mc. Reduced ratings, as indicated, are applicable for useful power outputs extending to 50 mc.
