

HI-FI AMP

Marantz

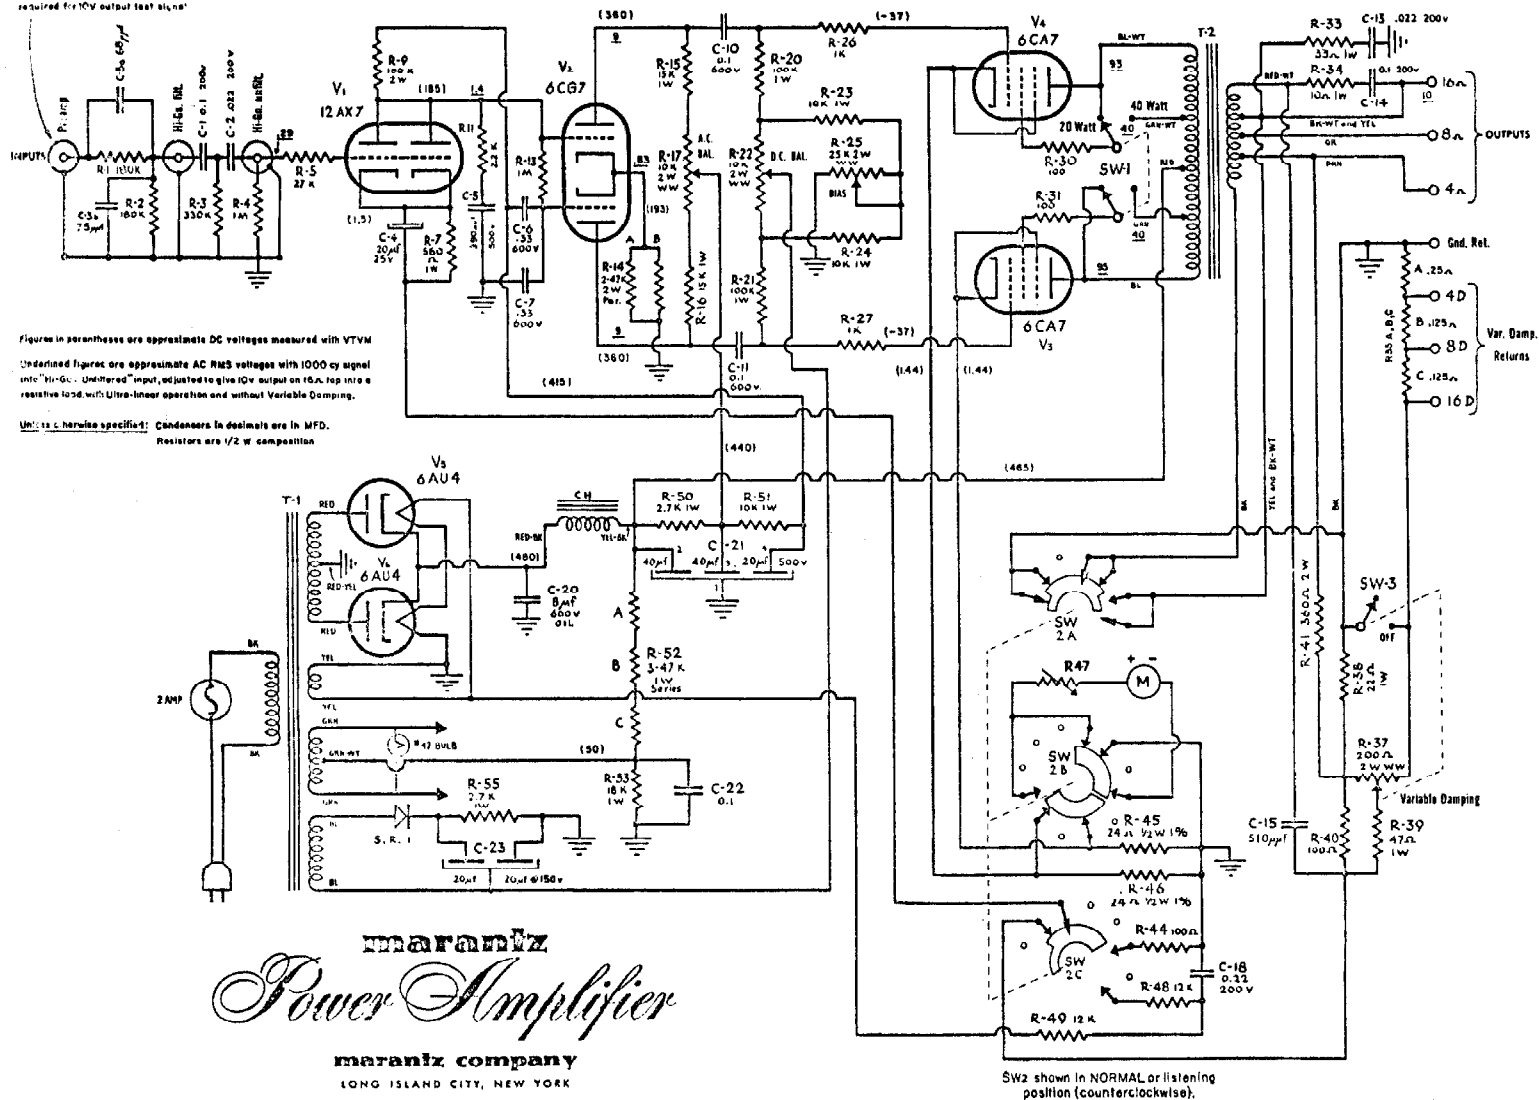

Approx. 0.8 V RMS into "Preamp" input
required for 10V output test alone*

Figures in parentheses are approximate DC voltages measured with VTVM

Underlined figures are approximate AC RMS voltages with 1000 cy signal
into "Hi-Fi". Unfiltered input, adjusted to give 10V output on 16 Ω tap, in a
relative load with Ultra-linear operation and without Variable Damping.

Units: unless specified: Condensers in decimals are in MFD.
Resistors are 1/2 W composition
