

stick, forming loops less than an inch in diameter by bringing the projecting ends of the rawhide and seizing it fast to the shaft. Just below these finger loops or stirrups were a long chalcedony knife or arrow blade, the tooth of a lion and a concretion of hematite seized by a plentiful wrapping of yucca cord. If the readers of *Science* will recall the Bourke example from Lake Patzcuaro, with its long, barbed spear with shaft of cane, he may follow me further and believe that a bit of cane and a spear head of chalcedony attached to a tang or foreshaft of wood lying in the same case, and pointed out to me by Mr. C. C. Willoughby, belonged to the same outfit. This is the first instance of finding the ancient atlatl, figured in the codices and described by Mrs Nuttall. It also connects the Cliff dwellers with the Mexican peoples.

Sept. 3, 1893.

WATER ANALYSES.

FEAR of cholera has caused waters to pour in floods into some of the analytical laboratories of Europe, and it is more interesting than reassuring to observe the methods followed in dealing with this accumulated work.

In the laboratory of one public analyst, the writer saw a large collection of water samples, as yet unopened, from various localities.

These samples, some of which were weeks old, had been collected in a variety of vessels, principally claret and whiskey bottles, and the corks employed were often old ones.

When one considers the excessive care required for

water sampling, the thought that the above lot were doubtless taken by inexperienced hands, with the aid of vessels certainly old and probably unclean, does not increase one's faith in the value of the analytical results.

Much to my surprise, I also saw in one laboratory the old writing-paper packing for connecting the retort with the condenser, a method of union long since discarded for something more reliable. It is so easy a matter to ruin a water analysis by indifferent attention to the proper setting up of the apparatus for the "albuminoid ammonia" process that modern practice discards, as inefficient, several recommendations made by Wanklyn, the originator of the method, and among them the paper packing mentioned.

In short, without wishing to be over-patriotic, my observations here lead me to the belief that Americans do not have to go abroad in order to gather information as to the most suitable methods for making an examination of potable water.

WILLIAM P. MASON.

Stuttgart, Germany, Aug. 9.

THE New York Shakespeare Society has begun to reprint, in its Bankside edition, the archaic texts of the seventeen plays first printed in the Heminges and Condell Folio of 1623. The first of these plays, *The Tempest*, will leave the press in a few days. Of these new volumes but 500 copies are printed, as before, hand numbered to correspond with the 500 sets of the prior twenty volumes, with which they are of course uniform in style, size, price, etc.

Indigestion

Horsford's Acid Phosphate

Is the most effective and agreeable remedy in existence for preventing indigestion, and relieving those diseases arising from a disordered stomach.

Dr. W. W. Gardner, Springfield, Mass., says, "I value it as an excellent preventative of indigestion, and a pleasant acidulated drink when properly diluted with water, and sweetened."

HENRY HOLT & CO., N.Y.

THE MODERN MALADY; or, Sufferers from 'Nerves.'

An introduction to public consideration, from a non-medical point of view, of a condition of ill-health which is increasingly prevalent in all ranks of society. In the first part of this work the author dwells on the errors in our mode of treating Neurasthenia, consequent on the wide ignorance of the subject which still prevails; in the second part, attention is drawn to the principal causes of the malady. The allegory forming the Introduction to Part I. gives a brief history of nervous exhaustion and the modes of treatment which have at various times been thought suitable to this most painful and trying disease.
