

Primer of Philosophy. By DR. PAUL CARUS. Chicago, Open Court Pub. Co., 12mo., \$1.

THIS book, notwithstanding its title, is the most elaborate work on general philosophy that Dr. Carus has yet published. The philosophical system that he advocates is in the intellectual sphere what he calls positivistic monism, and in the moral sphere meliorism. By monism he means that "soul and body, * * * are the too inseparable sides of our existence; they are two abstracts from one and the same reality" (p. 23). His monism evidently is the kind that is known as materialistic monism; for he does not believe in the soul as a distinct entity, but says that "a human personality is merely a society of ideas." The main object of this book, however, is to set forth the author's views on the subject of what Kant called *a priori* truths, and to reconcile, if possible, the views of Kant with those of Mill. Dr. Carus holds with Kant that "logical, mathematical principles are universal and necessary;" but on the other hand, he maintains with Mill that all our knowledge comes from experience. The question he has to answer, then, is how universal and necessary truths can be derived from experience, which consists entirely of particular perceptions; and we cannot think that Dr. Carus is any more successful in answering this question than others have been before him. He sees that universal truths cannot be got out of sensuous experience, yet he cannot accept Kant's view that they are known before experience; and he advances the opinion that such truths, or axioms, are "products of rigidly formal reasoning." To this the obvious reply is that there can be no formal reasoning without premises, and that, if the conclusion is to be valid, one of the premises must be universal; and furthermore, the principle of reasoning itself must be universal if the conclusion is to be sound. But while we cannot think that Dr. Carus has solved the problem he has taken in hand, we have been interested in reading his book and have found much in it that is suggestive. It shows throughout the moral earnestness and the desire to be useful that mark all its author's works, and will well repay perusal.

Essays on Rural Hygiene. By GEORGE VIVIAN POORE, M. D., F. R. C. P. London and New York, Longmans, Green, & Co. 321p, 8 vo.

FOR thirteen years honorary secretary and subsequently vice-chairman of the Parkes Museum of Hygiene, Dr. Poore is well qualified as an experienced sanitarian and his word in hygienic matters carries the weight of practical experience. Many of the chapters of the above-named work has been previously published, while others have been delivered as addresses before the University College, London, and before various scientific societies. The book has, however, a perfectly preserved plan and is in no sense a disjointed collection, nor does the former publication deduct from the interest, as unfortunately Dr. Poore's ideas of sanitation are totally at variance with the popular acceptance of that term and are not such as would be given wide publicity. The world has accepted very quickly the call for improved sanitary methods finding the subject, considered as a principle, one readily grasped by minds little trained in the sciences, and at the same time one which appeals very closely indeed to the comfort and health of the home. Unfortunately, however, this fervor of sanitation has opened the path for hundreds of banditti patentees and political highwaymen who have quickly seen and appreciated their opportunity, and who, from the ambush of "science" have rushed out and seized upon the public pocket-book. That the public has made so little resistance and has always so smilingly "held up its hands" is perhaps to its credit in a way, for it thereby exhibits a readiness to co-operate with science and it can not be expected to distinguish between the true and the false. But people like to pay well for public improvements and very probably if offered their choice between the modest and economical means proposed by Dr. Poore, and the criminally expensive processes urged by city boards, would unhesitatingly prefer the latter. We rather like being robbed by gallant knight of the mountains with bright colored scarfs and ornamental trappings. We can talk about it afterwards, boast of it in fact, and the more we have lost the prouder we are.

FOSSIL RESINS.

This book is the result of an attempt to collect the scattered notices of fossil resins, exclusive of those on amber. The work is of interest also on account of descriptions given of the insects found embedded in these long-preserved exudations from early vegetation.

By CLARENCE LOWN and HENRY BOOTH.

N. D. C. HODGES,

874 BROADWAY, NEW YORK.

A point well developed in these essays is the evil of concentration of population, and, together with this, the ever-growing problem of proper water supply and of sewage disposal. The question of pure air is discussed, and also the purifying power of "the living earth." Cities now committed to the evils of expensive and wasteful water supply, with all the accompanying difficulties and snares of sewage and sewage disposal, Dr. Poore very properly leaves without his discussion; they have gone so far as to make a turning back well nigh impossible. Where the end will be he does not even conjecture. It is to the rural and suburban population that he appeals, and most ably, for a consideration of certain means by which, upon a thorough scientific basis, they can secure an efficient sanitation for their homes, a pure water supply and an increased land value, all at a minimum of cost. Nor is this rested upon theory alone; the practical working in all details has been developed in the author's suburban home, and the same means there used by him are open to all of us who have that blessing of a small piece of ground, and who are not condemned to live in a "flat." C. P.

A Laboratory Manual, Containing Directions for a Course of Experiments in Organic Chemistry. By W. R. ORNDORFF, A. B., Ph.D., Assistant Professor of Chemistry in Cornell University. Boston, D. C. Heath & Co. 1893. Interleaved.

THE above manual is designed to accompany Remsen's "Organic Chemistry," and is systematically arranged as a laboratory companion to that book. It contains a course of experiments, eighty-two in all, graded in careful manner, leading on from the elementary principles of organic analysis, fractional distillation, the determination of melting points, etc., to the more advanced synthetical preparations. The procedure of the various operations is admirably given in few but comprehensive directions, and the experiments as described would present no difficulties to a beginner in the study. While parallel to Remsen's

book, it is more explicit, and gives greater detail of manipulation. The author's experience as a teacher has enabled him to select carefully the best conditions of experiment and to present them clearly to the student.

C. P.

—D. Appleton and Company have published a large octavo volume containing "Speeches and Addresses of William McKinley." They are mostly of a political character, and, as will be surmised, a large number of them are in advocacy of the protective tariff. Mr. McKinley is well known, not only as one of the leading advocates of the protective system, but also as the author of the existing tariff, and his prominence in the matter will make this book useful even to his political opponents. His views are so generally known, however, that we need not expound them here, and any discussion of them or of the protective system in these columns would be out of place. He expresses himself clearly and forcibly, and whoever wishes to become familiar with the protectionist theory in its extreme form will find it set forth in these pages. Many of the speeches in this volume, however, are on subjects of an unpartisan character, such as those commemorating the life and work of Grant, Garfield and other prominent men, together with several delivered on anniversary occasions. The author's enthusiastic patriotism—sometimes too enthusiastic, as it seems to us—appears in almost all of them, as well as his straightforwardness and earnestness. The general reader will be particularly pleased with his remarks on the public school system and his eulogy of the early New Englanders, and with his hearty appreciation of the eminent men whom he has known in public life. His strong partisanship, which shows itself so often, is not always pleasing to men of more moderate views; but in a country that is governed by parties it is necessary to know what the party leaders are thinking, and in this respect this volume will be useful to all students of American politics.

Indigestion

Horsford's Acid Phosphate

Is the most effective and agreeable remedy in existence for preventing indigestion, and relieving those diseases arising from a disordered stomach.

Dr. W. W. Gardner, Springfield, Mass., says, "I value it as an excellent preventative of indigestion, and a pleasant acidulated drink when properly diluted with water, and sweetened."

EXCHANGES.

[Free of charge to all, if of satisfactory character. Address N. D. C. Hodges, 874 Broadway, New York.]

For exchange.—Skins of *Aegialites nivosus*, *Ereuneter occidentalis*, *Aunnodramus Ardingi*, *A. rostratus*, *Chamara fasciata henshawii*, etc., for native or foreign skins with full data. Send lists. A. W. Anthony, 2042 Albatross st., San Diego, California.

I have a Beck New National monocular microscope, accessories, microtome, mounting material and a large number of fine slides. Will exchange the whole or in part for a first class type-writer or photograph outfit. A. C. Gruhlke, Waterloo, Ind.

Offered sidebloom eggs of *Bulimus oblongus* and exotic land and freshwater shells in exchange for Helices not in collection. Send lists to G. K. Gude, 5 Gresbach Road, upper Holloway, London, England.

Would like to exchange 100 specimens of Canadian Indian Relics for a photo outfit. E. J. Waters, 33 Hoffman St., Auburn, N. Y.

For Sale.—A collection of fossil *Rhinoceros* bones (*Aphelops fossiger* Cope.) from the Loup Fork Tertiary, including all the bones of one fore and one hind leg, the pelvis, representative vertebrae and ribs, and a nearly complete skull, with complete lower jaws. All the bones of the limbs are perfect. Price \$250. Address Dept. of Paleontology, University of Kansas, Lawrence.

Wants.

WANTED.—Tuckerman's Geneva Lichenum and Carpenter on the Microscope. State price and other particulars. Richard Lees, Brampton, Ont.

WANTED.—Icones Muscorum by W. D. Sullivan, with or without Supplement, but both preferred. Address, stating price and condition of books, Dr. G. N. Best, Rosemont, N. J.

WANTED.—A copy of Mascart & Joubert's Lessons in Electricity and Magnetism, Vol. I. Address R. W. Clawson, Vanderbilt University, Nashville, Tennessee.

CHEMIST.—Graduate of a polytechnical school, and studied photographic chemistry in Germany and Austria. Situation teaching or in analytical or experimental laboratory. M. B. Punnett, Rochester, N. Y.

WANTED.—A recent college graduate to assist in editorial work on Science. Those seeking large emoluments need not apply. N. D. C. Hodges, 874 Broadway, New York.

A GRADUATE in medicine, experienced, will prepare or revise scientific and medical manuscript for publication, read proof, compile bibliographies, &c. Will also consult New York libraries for persons out of town wishing references to rare works. Address M. D., 104 Cambridge Place, Brooklyn, N. Y.
