## THE AMERICAN ASSOCIATION FOR THE ADVANCEMENT OF SCIENCE.

THE Denver meeting was notable in several particulars. It was feared that a meeting so far west would be poorly attended, but the registration reached 311, being larger than that of the second Detroit and Madison meetings, and nearly as large as that of the Columbus and fourth Buffalo meetings. The number of representative men of science was proportionally very large, so that the sectional meetings were well attended and were as full of interest as at larger meetings of the Association, more than 200 papers having been presented. In the registration Colorado led with 79 members, while the number of members residing west of the Mississippi reached 162.

The attitude of the citizens of Denver and of Colorado, as indicated by the press and by arrangements for the convenience and entertainment of members, was most happy. This is well indicated by the following extract from an editorial which appeared in the *Denver Post* of August 30 :
