

After consultation with various biologists, it appears without question that a properly conducted survey of Panama would yield important scientific results, both as regards additions to knowledge and to the collections of the National Museum. While the Isthmus is not so well endowed with large forms of life as the great continental areas, such as Africa, southern Asia, etc., its fauna and flora are rich and diversified. The collecting which has been carried on there has been on a rather limited scale, and an extensive and thorough survey would surely produce new scientific information of great value.

A part of the fresh-water streams of the Isthmus of Panama empty into the Atlantic Ocean and others into the Pacific Ocean. It is known that a certain number of animals and plants in the streams on the Atlantic side are different from those of the Pacific side, but as no exact biological survey has ever been undertaken, the extent and magnitude of these differences have yet to be learned. It is also of the utmost importance to determine exactly the geographical distribution of the various organisms inhabiting those waters, as the Isthmus is one of the routes by which animals and plants of South America have entered North America and *vice versa*. When the canal is completed, the organisms of the various watersheds will be offered a ready means of mingling together, the natural distinctions now existing will be obliterated, and the data for a true understanding of the fauna and flora placed forever out of reach.

By the construction of the Gatun Dam, a vast freshwater lake will be created, which will drive away or drown the majority of the animals and plants now inhabiting the locality, and quite possibly exterminate some species before they become known to science.

President Taft fully approved the plan for a biological survey and suggested that such arrangements be made with the secretary of war, the secretary of agriculture, and the secretary of commerce and labor as would enable him to have their active cooperation in this important work. The arrangements are now in an advanced state, and field parties will be sent to the isthmus at an early date.

The expenses of these parties will be borne from a fund contributed by a number of public spirited friends of the institution.

THE POPULATION OF THE UNITED STATES

THE Census Bureau has issued a statement giving the results of the thirteenth census for the separate states. The figures and a comparison with the population of 1900 are as follows:
