SCIENCE is the official organ of the American Association for the Advancement of Science. Information regarding membership in the association may be secured from the office of the permanent secretary, in the Smithsonian Institution Building, Washington, D. C.

Entered as second-class matter July 18, 1923, at the Post Office at Lancaster, Pa., under the Act of March 3, 1879.

Addresses given on the occasion of the dedication of the building for the National Academy of Sciences and the National Research Council, Washington, April 28, 1924

THE PRESIDENT OF THE UNITED STATES:

If there be one thing in which America is pre-eminent, it is a disposition to follow the truth. It is this sentiment which characterized the voyage of Columbus. It was the moving impulse of those who were the leaders in the early settlement of our country, and has been followed in the great decisions of the nation through all its history. Sometimes this has been represented by political action, sometimes by scientific achievements. On this occasion, the emphasis is on the side of science.

By science I mean the careful assembling of facts, their comparison and interpretation. Of those who are entitled to high rank in both our political and scientific life, perhaps Benjamin Franklin was the earliest and one of the most conspicuous examples. But it is the same spirit that has moved through all our life, which makes it particularly appropriate that our national government should be active in its encouragement of the searching out of the truth in the physical world, and applying it to the wellbeing of the people, as it is interested in the searching out of the truth in the political world with the same object in view.

President Washington, in his farewell address to the American people said: "Promote, then, as an object of primary importance, institutions for the general diffusion of knowledge. In proportion as the structure of a government gives force to public opinions it should be enlightened." It was the first President of the United States who saw the necessity of research in this country. Jefferson, our third President, was himself a research worker by natural gift, and loved the problems which gave him a broader knowledge of our natural surroundings. The beginning of our government, therefore, had to do with the inception of scientific research in the United States.

American science may be divided into five periods—the Jefferson period, that of Silliman, the Agassiz period, the present period of cooperative research when no one dominates, and the future for which definite foundations are being laid.

Johns Hopkins University Medical School

The Medical School is an Integral Part of the University and is in the Closest Affiliation with the Johns Hopkins Hospital.

ADMISSION

Candidates for admission must be graduates of approved colleges or scientific schools with at least two years' instruction, including laboratory work in chemistry, and one year each in physics and biology, together with evidence of a reading knowledge of French and German.

Each class is limited to 75 students, men and women being admitted on the same terms. Except in unusual circumstances, applications for admission will not be considered after July 1st.

If vacancies occur, students from other institutions desiring advanced standing may be admitted to the second or third year provided they fulfill our requirements and present exceptional qualifications.

INSTRUCTION

The academic year begins the Tuesday nearest October 1, and closes the second Tuesday in June. The course of instruction occupies four years and especial emphasis is laid upon practical work in the laboratories, in the wards of the Hospital and in the dispensary.

TUITION

The charge for tuition is \$300 per annum, payable in three installments. There are no extra fees except for rental of microscope, certain expensive supplies, and laboratory breakage.

The annual announcement and application blanks may be obtained by addressing the

Dean of the Johns Hopkins Medical School,
Washington and Monument Sts., Baltimore, Md.

Summer Work for Graduates in Medicine

Beginning Monday, June 2d, and ending Saturday, July 12th, a course in medical diagnosis, including laboratory exercises in clinical pathology and demonstrations in pathological anatomy, will be offered. The course will be limited to thirty students, fee \$100. Applications should be made to the Dean's Office.

ANNOUNCEMENT

may be obtained by application to

WESLEY T. LEE, M.D., Registrar

80 East Concord Street,

Boston,

Massachusetts.

Stanford University California

Summer Quarter, 1924

Tuesday, 24 June, to Saturday, 30 August
Second half begins 28 July

Opportunities to work for the A. B. and for higher degrees, or to do special work, in the oceanic climate of the San Francisco peninsula.

Courses in the regular academic and scientific branches, and in law.

Information from Office 53,

STANFORD UNIVERSITY
CALIFORNIA

Marine Biological Laboratory

Woods Hole, Mass.

INVESTIGATION

Entire Year

Facilities for research in Zoology, Embryology, Physiology, and Botany. Eighty-four private laboratories \$100 each for not over three months. Thirty tables are available for beginners in research who desire to work under the direction of members of the staff. The fee for such a table is \$50.00.

INSTRUCTION

July 2 to August
12, 1924

Courses of laboratory instruction with lectures are offered in Invertebrate Zoology, Protozoology, Embryology, Physiology and Morphology and Taxonomy of the Algae. Each course requires the full time of the student. Fee, \$75.00.

SUPPLY DEPARTMENT

Open the Entire
Year

Animals and plants, preserved, living, and in embryonic stages. Preserved material of all types of animals and of Algae, Fungi, Liverworts and Mosses furnished for classwork, or for the museum. Living material furnished in season as ordered. Microscopic slides in Zoology, Botany, Histology, Bacteriology. Catalogues of Zoological and Botanical material and Microscopic Slides sent on application. State which is desired. For catalogues and all information regarding material, address:

GEO. M. GRAY,

Curator, Woods Hole, Mass.

The annual announcement will be sent on application to The Director, Marine Biological Laboratory, Woods Hole, Mass.

SMITHSONIAN INSTITUTION

THE WALTER RATHBONE BACON SCHOLARSHIP

The Secretary of the Smithsonian Institution has approved the rules which are to regulate the award of the Walter Rathbone Bacon Scholarship for the study of the fauna of countries other than the United States of America. The amount available is the interest on the capital invested (about \$2,400 a year) the incumbent to hold the scholarship not less than two years.

Applications for this scholarship, addressed to the Secretary of the Smithsonian Institution, should be submitted not later than June 1, 1924. The application should contain a detailed plan for the proposed study including a statement as to the faunal problems involved; the reasons why it should be undertaken; the benefits that are expected to accrue; the length of time necessary for the carrying out of the project; the estimated cost; and the scientific and physical qualifications of the applicant to undertake the project.

The scholarship will be awarded for a term of two years. If at the expiration of the term it is desired to extend the time, the incumbent shall make application a sufficient time in advance, accompanied by a statement as to the necessity for such extension.

All collections, photographs, records and equipment become the property of the Institution.

The incumbent shall not engage in work for remuneration or receive salary from other sources than the Institution or its branches during the period of this occupancy of the scholarship.

For any further information, address the Secretary, Smithsonian Institution, Washington, D. C.

LEITZ
Ore-Dressing Microscope

After Prof. H. Schniederhoehn

This microscope is most useful inasmuch as it is constructed to serve in an ideal manner for the determination and calculation of ore-dressing products. Being a microscope for binocular vision it renders a stereoscopic effect combined with an extremely large field and long working distance between specimen and objectives.

The equipment includes three pairs of oculars through which the microscope is available for magnifications of 10, 15 and 20x. The oculars are mounted to a rotating disc and afford an immediate interchange from one magnification to another. For measuring and counting of grains six grid-micrometers, ruled in squares of 1.0, 0.60, 0.50, 0.25, 0.10 and 0.075 mm., corresponding to the sieves used in sifting the material, are furnished with the instrument. These micrometers are inserted into the oculars.

A dish-shaped stage permits the fragments to be examined immersed in water; the bottom of the dish has a ruled square of 5 cm. x 5 cm., this being subdivided into 25 smaller squares of 1 x 1 cm., thereby facilitating the counting of grains.

The microscope is equipped with three rack- and pinion-movements; one controls the forward and backward motion of the microscope tubes, another the sideward motion of the stand to the microscope stage and the third controls the focus to the specimen.

Aside from counting and controlling ore-dressing products, the microscope is available for the stereoscopic examination of coarse specimens of crude material by removing the microscope stage and placing the specimen directly upon the microscope base.

Microscope, complete, as described, in wooden cabinet with lock and key \$185.00
