JUST READY

Stokes' Clinical Syphilology

This new work had its inception in the reception accorded a novel teaching method presented at the National Conference on Venereal Disease Control in 1920. It is planned not alone for the syphilologist but particularly for the general clinician and student. In every instance it is explicit, not only telling *what* to do but also *how* to do it. While it is not a laboratory manual it does deal fully with the *application* of laboratory methods.

The basis of the work is observations made over a period of ten years as teacher and practitioner. Practically every known aspect of syphilis is treated, with unusual emphasis on *neurosyphilis*. It is a monographic presentation of a massive co-operative effort, and makes available for the first time in English in reasonably complete form a huge accumulation of knowledge on the pathologic physiology and immunology of syphilis.

The illustrations have been taken especially to illustrate problems in the clinical behavior of syphilis. The procedures are illustrated step by step, down to the very point of the needle under magnification. The Herxheimer reaction, for example, the cause of so many therapeutic difficulties, is made visible by serial photographs of various types of lesions at stated times before and after the onset of therapeutic shock.

Tabular summaries, resumes, aphoristic thumbnail sketches, and case discussions provide a specially accessible presentation of the fundamentals of each type.

Octavo volume of 1144 pages, with 865 illustrations. By **John H. Stokes, M.D.**, Professor of Dermatology and Syphilology, University of Pennsylvania. Cloth, \$12.00 net.

The Fundamental Bacteriology, Pathology, and Immunology.
The Clinical Approach to Syphilis
The Physical Examination for Syphilis
The Fundamental Diagnostic Tests
Some Fundamental Principles of Treatment
Mercury, Bismuth, and the Iodids
The Arsphenamins — Theoretical and Practical Considerations
Technical Detail of Arsphenamin Administration
Technical Methods in Diagnosis and Treatment
The Clinical Reactions, Complications, and Contraindications of Treatment for Syphilis
Collateral Factors in Treatment
The Diagnosis of Early Syphilis—The Chancre
The Diagnosis of Early Syphilis—The Secondary Stage
The Treatment of Early Syphilis
Landmarks of Late Syphilis on Skin and Mucous Membranes
Late Syphilis of the Skeletal System
The Gastro-intestinal Tract
Syphilis of the Liver and Spleen
Syphilis of the Cardiovascular System
Late Syphilis of the Central Nervous System
Familial and Prenatal Syphilis (Heredosyphilis)
Miscellaneous Aspects and Case Memoranda
Public Health Aspects, Clinical Organization, Social Service, Prophylaxis and Follow-up

NAME ADDRESS

Important VAN NOSTRAND Books On PHYSICS

Contemporary Physics

By KARL K. DARROW, *Member of the Technical Staff, Bell Telephone Laboratories.*

This book has been developed out of the series of articles by Dr. Darrow which have been appearing in the Bell System Technical Journal under the title "Contemporary Advances in Physics." The substance of the articles has been recast to a considerable extent and greatly amplified, and a number of subjects not treated in the Journal have been introduced, so that the book presents a connected account of the chief phenomena upon which contemporary atomic theories are based, and an introduction to the theories themselves. Price \$6.00

X-Rays and Electrons

By ARTHUR COMPTON, *Professor of Physics at the University of Chicago.*

A detailed treatment of the phenomena of X-Rays and Electrons, covering the author's important original investigations on the subject, as well as the valuable contributions of other scientists. Publication Date, October, 1926. Price \$6.00

Theory of Vibrating Systems and Sound

By IRVING B. CRANDALL, *Member of the Technical Staff, Bell Telephone Laboratories.*

The purpose of this book is to give, in modern terms, a treatment of the basic theory of vibrating systems and sound, and show how it has been applied to current problems. It is based upon courses recently given by Dr. Crandall at Bell Telephone Laboratories and the Massachusetts Institute of Technology.

The problems chosen for discussion include a number to which the author and others in the Bell Telephone Laboratories have made contributions in recent years as well as other representative modern work. Price \$5.00

Physics for Colleges

By H. HORTON SHELDON, Ph.D., *Assoc. Professor of Physics, New York University*; C. V. KENT, Ph.D., *Assoc. Professor of Physics, University of Kansas*; CARL W. MILLER, Ph.D., *Assistant Professor of Physics, Brown University*, and ROBT. F. PATON, Ph.D., *Assoc. Professor of Physics, University of Illinois.*

A new textbook for beginning classes covering Mechanics; Heat and Molecular Physics; Electricity and Magnetism, and Sound and Light. Continuity of thought and the introduction of the modern viewpoint recommend it to progressive teachers. Price \$3.75

D. VAN NOSTRAND COMPANY

8 Warren Street

New York, N. Y.

An efficient apparatus for the study of ULTRAVIOLET

IN an unusually interesting article, Dr. W. T. Bovie, of Harvard University, recounts his laboratory experience with light in connection with the growth of plants. In the same account, he describes the tests conducted at the University of Maine to determine the effect of sunlight upon the growth of chicks.

Ultraviolet energy figured prominently in the conduct of the experiments discussed. The interesting discoveries of scientists who have been working with ultraviolet are not limited to biology, but include important findings in other scientific branches and in many industrial processes.

The HANOVIA quartz mercury arc lamp for scientific purposes, a potent source of ultraviolet rays, is a very dependable laboratory apparatus. Those considering the study of ultraviolet should send for our descriptive pamphlet.

Reference: Scientific Monthly
July, 1925

Hanovia Quartz Mercury Arc Lamp, complete on stand with Sliding Contact Rheostat

Laboratory Quartz Ware

With the employment of ultraviolet, the necessity for perfect quartz ware becomes immediate. Quartz ware of unique transparency and in shapes difficult to obtain elsewhere, is regularly carried in stock. Special order work is handled with noteworthy dispatch. Besides its use in connection with ultraviolet light, many laboratory workers have shown a decided preference for quartz over ordinary glassware on account of its extreme fusing point (1750°C.), its insolubility, its transparency and low coefficient of expansion (0° to 1000°C. , .00000054).

HANOVIA CHEMICAL & MFG. CO.

Chestnut St. and New Jersey R. R. Ave., Newark, N. J.

- ☐ Please send me your pamphlet describing the Quartz Mercury Arc Lamp.
- ☐ Please send me your pamphlet describing your Quartz Laboratory Ware.

NEW ENCYCLOPAEDIA

**It's All Here—the Complete
Record of World Progress!**

**[THIRTEENTH
EDITION
All-inclusive]**

GIANT presses speed forth the final pages. Fresh from the pens of the foremost living authorities, the new Britannica is here. This, the Thirteenth Edition, is as vast an achievement as any of the age's advancements which it records so brilliantly.

Sparkling, clear-cut reflection of all happenings of the breathless years just past is in these pages, and also the events about to be, those pending in laboratory and council chamber. Tomorrow's news is in the new Britannica.

World-Changing Progress

Inventors and business executives, scientists and leaders in today's advance, are eagerly awaiting this new Encyclopaedia Britannica. It affords the one up-to-date survey of all the stupendous world-changing progress of recent years. Here is news of telegraphic freshness from every frontier of civilization.

The Threshold of Tomorrow

The new Britannica is your 2,500 brain-power ally. Here are 45,000 separate articles from more than 2,500 authorities in every civilized country of the world. It is a wealth of facts, information, ideas, suggestions—all so accurately observed, so expertly written as to make the most secure foundation for any activity, of the present and immediate future.

To the Student and Scientist the new Britannica is a great international laboratory and lecture hall combined. To the manufacturer it is an up-to-date industrial plant which he may visit at will. To the Merchant it is a busy mart, a source of never-failing profit. To the Wage Earner it is the key to success, power and affluence. To the lover of the Great Outdoors it is the broad highway that leads to all the wonders of the world.

Discoveries are here that may

further any man's present endeavors. Be among the first to know, and apply, this timely information.

Great Vital Value

In extent of information alone, the 33,000 pages of the Thirteenth Edition with 55,000,000 words equal more than 500 ordinary text books costing at least \$1,200. Yet you can have all this at a fraction of that cost. Here are the 28 volumes of the latest standard Encyclopaedia Britannica to which are added the three new volumes and an enlarged Index Volume comprising the new Thirteenth Edition of 32 volumes occupying less than 36 inches of shelf space. And easy terms of payment to meet any budgeting system are offered.

Prove It to Yourself

Human knowledge has opened out into new channels. For every ten opportunities of our fathers

we have a hundred. By weighing present developments you assure yourself a full share of new opportunities.

To examine the possibilities costs you nothing.

The thrill of a most practical discovery is yours.

Through the medium of a most handsome and complete descriptive book of 80 pages you can examine the practical value of this new Thirteenth Edition of the world famed Encyclopaedia Britannica. This is sent you FREE. Here are reproduced specimen pages, many in color surpassing all similar work. In itself this is a treasure of information, a vast survey of progress in sciences and arts.

This 80-Page Booklet FREE

is here awaiting your name and address. Write for it now. Fill in the coupon below and drop it in the mail before the last collection tonight.

Binocular Microscope, with Bakelite Molded parts, made by Spencer Lens Co., Buffalo, N. Y.

Precise dimensions pre-determined through Bakelite Molded

Probably no form of instrument requires a higher degree of precision in its dimensions than the binocular microscopes used for scientific work.

In the tubes of the oculars of the Spencer Binocular Microscope, the extreme accuracy and certain interchangeability required is secured through molding these parts of Bakelite. Threads are formed, the metal inserts required for holding the

prisms are embedded and a lustrous finish acquired in a single molding operation.

The use of Bakelite Molded has effected production economies and also improved quality for many manufacturers. Our engineers and research laboratories would be glad to cooperate with you in discovering the possibilities of Bakelite for your own product. Write for Booklet 11, "Bakelite Molded."

NEW MODEL

PROJECTION APPARATUS for the PROJECTION OF OPAQUE OBJECTS AND LANTERN SLIDES with SUPERIOR OPTICAL EQUIPMENT

MODEL Vc.

for screen distances of 10 to 30 feet,

consisting of housing, a two-lens condenser, lantern slide changer, mirror 190 x 120 mm for opaque projection, parabolic mirror for lamp, foldable mirror to change from lantern slide to opaque projection, metal support with springs to hold opaque specimens, postcard changer, two each frames for lantern slides $3\frac{1}{4} \times 3\frac{1}{4}$ ", $4\frac{1}{4} \times 3\frac{1}{4}$ ", and $4\frac{3}{4} \times 3\frac{1}{4}$ " special filament lamp, 11½ ft. cord and plug, two highly corrected objectives, one of 250 mm (10") focal length for lantern slide—the other 400 mm (16") focal length for opaque projection.

complete \$200.00
Same, without lantern slide projection arrangement \$155.00

MODEL Vd.

for screen distances of 10 to 15 feet,

consisting of housing, a two-lens condenser, lantern slide changer, mirror 190 x 120 mm for opaque projection, parabolic mirror for lamp, foldable mirror to change from lantern slide to opaque projection, metal support with springs to hold opaque specimens, postcard changer, two each frames for lantern slides $3\frac{1}{4} \times 3\frac{1}{4}$ ", $4\frac{1}{4} \times 3\frac{1}{4}$ ", and $4\frac{3}{4} \times 3\frac{1}{4}$ " special filament lamp, 11½ ft. cord and plug, two highly corrected objectives, one of 150 mm (6") focal length for lantern slide—the other 250 mm (10") focal length for opaque projection.

complete \$195.00
Same, without lantern slide projection arrangement \$150.00

Many projection apparatus are in the market, but with these new model Leitz Projectors, the efficiency of construction has been carried to a point that:

- (1) Manipulation is very simple;
- (2) The images are of superior brilliancy;
- (3) Source of light and optical systems are of perfect correction to each other;
- (4) They serve scientific lectures in an ideal manner.

WRITE FOR PAMPHLET (O) H-2085.

CHRISTIANSEN IONOMETER

A self-contained, portable instrument for the convenient determination of the electrometric conductivity of biological and other fluids

4038.

CHRISTIANSEN IONOMETER.

A self-contained, portable instrument, of simple design and easy manipulation for the determination of the electrometric conductivity of biological and other fluids, the resistances of which are not less than that of a 1% sodium chloride solution, and suitable for determinations in which a 1% average error is permissible. Requires about 0.5 ml of fluid.

The apparatus consists of a specially constructed voltmeter for direct current which, by means of two contact buttons, may be connected across a 110 volt commercial line, either directly or in series with a conductivity cell immersed in a water bath. The scale is divided into 220 divisions and is easily read to $\frac{1}{4}$ th of a division. A magnetic shunt built into the voltmeter permits setting the latter to a standard reading when measuring the house current alone.

The method utilizes the principle that, for resistances in series, the e.m.f. across each resistance is proportional to that resistance. See H. C. Gram and Glenn E. Cullen, "The Accuracy of the Ionometric Method and of the Protein Correction in Measuring Serum Conductivity," *Journal of Biological Chemistry*, Vol. LVII, No. 2 (Sept.) 1923.

4038. Christiansen Ionometer, as above described, complete with thermometer 0 to 50° C in 1° divisions, 6 ft. connecting cord with plug, conductivity table of maker's determinations, graph of specific conductivities at 20° C of salt solutions from 0.55 per cent. to 0.75 per cent. concentration, and directions for use.

SCIENCE: A Weekly Journal devoted to the Advancement of Science, edited by J. McKen Cattell and published every Friday by

THE SCIENCE PRESS

Lancaster, Pa.

Garrison, N. Y.

New York City: Grand Central Terminal.

Annual Subscription, \$6.00. Single Copies, 15 Cts.

SCIENCE is the official organ of the American Association for the Advancement of Science. Information regarding membership in the Association may be secured from the office of the permanent secretary, in the Smithsonian Institution Building, Washington, D. C.

Entered as second-class matter July 18, 1923, at the Post Office at Lancaster, Pa., under the Act of March 8, 1879.

WE have come to an important milestone in the development of an organized effort to promote the advancement of chemistry in America. Fifty years have passed since the American Chemical Society was founded. Under the inspiration of one of the greatest heroes of science, a few chemists who had come together at Northumberland to honor Priestley's memory and the discovery of oxygen conceived a close association of those who had caught some of the spirit of the great experimenter, and shortly after the society was established in New York. No fitter occasion can be conceived for the birth of an idea that grew into a power for so much good.

The development of chemistry in this country was slow at the start. The new nation had to see to its material advancement. It had unlimited natural resources and its rapidly growing population, made up of those seeing freedom and opportunity, had to be housed, fed and clothed and given facilities for communication and transportation. As a result the best brains were devoted to supplying these necessities. It is only in recent years—in the memory of many of us—that the pursuit of chemistry as a life work has appealed. The young man, fifty years ago, was compelled to go to Europe to prepare himself for a scientific career; and it is only comparatively recently that a wise adviser has been able to emphasize the advantages of study at home.

But the last quarter century has seen in America a steady growth of chemistry, and the record of the last decade can not anywhere be surpassed. The story of these achievements has all been written, and we present it with pride to America and the world.

The American Chemical Society has been an important factor in this development. It has been and will be, in an increasing measure, a stimulus to further advance. Through its publications and its organization that brings together men of kindred interests, it makes possible the kind of cooperation that means success. Its efforts to educate the people to an appreciation of the importance of chemistry in the public welfare are becoming more and more successful. The value of a flourishing chemical industry in times of peace and its necessity as a means of defense in times of war are being brought home

¹ Address of the president of the American Chemical Society, given at the anniversary meeting, Philadelphia, September 6, 1926.

The Bausch & Lomb Permanently Aligned

Compact Micro-Projector

THIS new instrument has been designed to meet the demand for a compact and permanently aligned Micro-Projector. All optical parts are accurately precentered and are vertically and laterally aligned. The only centering adjustment necessary on the part of the user is to bring the light source [either a Mazda unit or an Automatic Feed Arc Lamp] into alignment with the optical axis. This adjustment is easily made by two screws on the rear of the illuminating unit support.

The substage is arranged with three condensers and a heat absorbing filter glass. The condensers—on swinging arms—take care of a range of objectives from a 72 mm Micro-Tessar to a 4 mm objective.

May we send descriptive literature?

Just one of our Superior Methods

In producing Analysis-Certified Chemicals, we are determined to adopt every reasonable expedient that will give our customers unusual quality or convenience.

An example is our new square-necked wax bottle for Hydrofluoric Acid. This sensible shape for the opening gives the user—no matter how he happens to pick up the bottle—a groove through which he can pour the acid just where it is wanted, without waste or danger of spattering this corrosive acid on the user. Square stopper fits snugly.

You will be delighted with Sterling Service on Analysis - Certified Chemicals.

Send for Price List.
