

This council is also contemplating the calling of a Pan-Pacific Entomological Conference in Honolulu.

The Pan-Pacific Editorial Council has established a quarterly publication as a *Journal* of the institution and has a board of editors composed of the leading scientists in all Pacific lands.

The crop development and other councils are laying foundation for serious work and cooperating thoroughly in the work of their companion councils.

Executives who are also research workers are often welcomed at the institution in their capacity as research workers. The members of the institution will employ their own executives when needed and they may not be scientists, merely experienced men to carry out the wishes of the scientists in regard to general management. It is felt that the executive is usually the man who has, or can secure, the means for travel and expenses abroad, while the research worker is often unable to do this, so that, while the help, cooperation, association and good will of the executive is always desired and his visits looked forward to, the Pan-Pacific Research Institution is a purely democratic organization of research workers who are all equals in a family of scientists who are devoting their time to the service of mankind.

### STANDARDIZATION OF ANATOMICAL TERMINOLOGY

THE following circular from the scientific relations section of the International Institute of Intellectual Cooperation at Paris has been received by the American national committee of the institute with a request that it be brought to the attention of American anatomists:

M. de Castro, dean of the faculty of medicine of Rio de Janeiro, has recently brought before the International Institute of Intellectual Cooperation a project for the standardization of terminology in anatomy and nosology.

The utility of such an undertaking is evident. It is an admitted fact that considerable misunderstanding arises among scholars through the divergence existing in scientific terminology. Thus bibliographical work is complicated and the propagation of scientific knowledge is seriously and unnecessarily impeded.

After examination, M. de Castro's proposal was brought before the sub-committee on bibliography of the Committee on Intellectual Cooperation of the League of Nations which met at Geneva on the 23rd and 24th of July, 1926.

It was decided that M. de Castro's proposal concerning nosological terminology should be referred to the health committee.

With regard to anatomical nomenclature, it has not been possible up to the present to draw up an anatomical

nomenclature that would be acceptable to all nations. But, considering that there already exists a nomenclature known as "Nomina Anatomica," which was adopted by a certain number of countries after the International Congress held in 1895, under the auspices of the "Anatomisches Gesellschaft" at Basle and also that this nomenclature constitutes an appreciable step towards the standardization of anatomical terms, the sub-committee on bibliography has decided to recommend scientists belonging to countries not accustomed to using the "Nomina Anatomica," that they place this terminology in brackets in addition to the national terms used in their textbooks, treatises and other scientific publications.

The International Institute of Intellectual Cooperation has the honor to inform you of this resolution of the sub-committee on bibliography in the hope that, in the interest of international scientific collaboration, you will be willing to give it the benefit of your serious attention.

(Signed) J. S. DE VOS VAN STEENWYK,  
Assistant Head of the Scientific  
Relations Section

### PUBLICATIONS OF THE AMERICAN PSYCHOLOGICAL ASSOCIATION

IN January, 1925, the American Psychological Association bought the stock of the Psychological Review Company, Inc., and became the sole owner of the journals published by that company, namely, the *Psychological Review*, H. C. Warren, editor; the *Psychological Bulletin*, S. W. Fernberger, editor; *The Psychological Index*, Madison Bentley, editor, and the *Journal of Experimental Psychology*, J. B. Watson, editor. The Review Company has acted as publishers of the "Psychological Monographs" with S. I. Franz as editor. The monographs, however, are owned by the respective authors. It is the plan of the association to continue to publish the monographs on a percentage basis as heretofore.

In order to comply with legal formalities, the association became incorporated before purchasing the journals. The members of the council of the association became the directors of the company. The former editors were all retained. Subsequently Professor Watson resigned from the *Journal of Experimental Psychology* on account of pressure of business. Professor Bentley became editor of that journal, and Professor Hunter was appointed editor of the *Psychological Index*.

The transfer of ownership of the journals resulted from the desire of many of the psychologists to have the scientific journals under public rather than private ownership. There are certain rather obvious advantages. In the first place, there is the assurance that the profits, if any, will be used to improve the journals and to reduce the subscription rates, and secondly, the policy of the journals will be subject to the wishes of a majority of the persons served, rather
