NEW SERIES
VOL. LXIV, No. 1670

FRIDAY, DECEMBER 31, 1926

ANNUAL SUBSCRIPTION, \$6.00
SINGLE COPIES, 15 CTS.

A HAPPY NEW YEAR

Morse's Bio- Chemistry

This new work combines a teaching text with laboratory technic and exercises, constantly applying biochemistry to clinical medicine. It links up physiological chemistry with medicine more closely than any other book. The author goes into painstaking detail in explaining calculations, organic chemical formulæ, and chemical, physical and biologic laws and reactions. The reader is not left to guess at the reasons for the various steps, but rather, each expression or factor is carefully worked out.

Octavo of 950 pages, illustrated. By **Withrow Morse, Ph.D.**, Professor of Physiologic Chemistry and Toxicology, Jefferson Medical College. Cloth, \$7.00 net.

McClendon & Medes' Physical Chemistry

The book has two main divisions. In the first is taken up the Physico-chemical side of the subject and in the second the Physiologic. Under the former are presented mass and volume, the colloid particle, intermolecular forces, electrolytic dissociation and chemical equilibria, hydrogen ions. Under physiologic are discussed radiant energy, atomic structure and physiologic action, thermochemistry in the living body, colloids in organisms, hydrogen ions in biology (enzymes, bacteria, soils, natural waters, urine), ionic equilibria in blood, osmosis, permeability, and surface forces.

Octavo of 425 pages, illustrated. By **J. F. McClendon, Ph.D.**, Professor of Physiologic Chemistry at the University of Minnesota Medical School; and **Grace Medes, Ph.D.**, Assistant Professor of Physiologic Chemistry at the University of Minnesota Medical School. Cloth, \$4.50 net.

Jordan's Bacteri- ology

Dr. Jordan has given his work for this *eighth edition* a most complete revision. He has added a great deal of new material on the bacteriophage phenomenon, tularemia, botulism, scarlet fever, and other subjects in which recent progress has been made. The chapter on Anaërobes has been extensively revised. Dr. Jordan's book is very complete. A chapter is devoted to the filtrable viruses. There are chapters on the bacteria of the air, soil and water; bacteria in the arts and industries; the bacteriology of milk and milk products; bacteria and the nitrogen cycle, and the bacterial diseases of plants.

Octavo volume of 752 pages, illustrated. By **Edwin O. Jordan, Ph.D.**, Professor of Bacteriology, University of Chicago and Rush Medical College. Cloth, \$5.00 net.

THE PHYSIOLOGY OF THE CONTINUITY OF LIFE

By

*D. NOËL PATON, M.D., B.Sc., LL.D.,
F.R.S., Regius Professor of Physi-
ology, University of Glasgow.*

The subject matter of this book is developed through a discussion of the following subjects: life and heredity; reproduction; sex; the determination of sex; the relation of the germ cells to the somal cells; the influence of the gonads upon the soma; the influence of the soma on the gonads; sexual life; the nutrition of the Zygote before birth (pregnancy); parturition and the nutrition of the infant—suckling and milk secretion.

The author in his preface emphasizes his intention of presenting evidence rather than dogma, and makes the statement that "authoritative text books have played a great part in obstructing the advance of science."

Cloth, 8vo, 226 pp. \$4.00

A BIPOLAR THEORY OF LIVING PROCESSES

By

*GEORGE W. CRILE, M.D.
Edited by Amy F. Rowland.*

Starting with the tenet that electricity is a constant phenomenon of living processes, the author by logical steps reaches the conclusion that the organism as a whole is a bipolar electro-mechanism having the pattern of the unit cells, and that the unit cells are constructed on the pattern of the atom. Hence, reasons the author, the normal and pathologic phenomena of men and animals may be interpreted in electro-chemical terms.

Of necessity, the conclusions arrived at are of a speculative nature, but the wealth of research underlying every conclusion lends weight to a theory difficult of immediate acceptance.

BROOKLYN BOTANIC GARDEN MEMOIRS

Volume I: 33 contributions by various authors on genetics, pathology, mycology, physiology, ecology, plant geography, and systematic botany. Price, \$3.50 plus postage.

Volume II: The vegetation of Long Island. Part I. The vegetation of Montauk, etc. Pub. 1923. 108 pp. Price, \$1.00.

AMERICAN JOURNAL OF BOTANY

Devoted to All Branches of Botanical Science

Established 1914. Monthly, except August and September. Official Publication of the Botanical Society of America.

Subscription, \$7 a year for complete volumes (Jan. to Dec.). Parts of volumes at the single number rate. Volumes 1-13 complete, \$106. Single numbers, \$1.00 each, post free. Prices of odd volumes on request. Foreign postage: 40 cents.

ECOLOGY

Devoted to All Forms of Life in Relation to Environment

Established 1920. Quarterly. Official Publication of the Ecological Society of America. Subscription, \$4 a year for complete volumes (Jan. to Dec.). Parts of volumes at the single number rate. Back volumes I, II, and IV-VII, \$5 each.

Single numbers, \$1.25 post free. Foreign postage: 20 cents.

GENETICS

A Periodical Record of Investigations bearing on Heredity and Variation

Established 1916. Bimonthly. Subscription, \$6 a year for complete volumes (Jan. to Dec.). Parts of volumes at the single number rate. Single numbers, \$1.25 post free. Back volumes 2-10 only, \$7.00 each. Foreign postage: 50 cents.

Orders should be placed with

SCIENCE: A Weekly Journal devoted to the Advancement of Science, edited by J. McKeen Cattell and published every Friday by

THE SCIENCE PRESS

Lancaster, Pa. Garrison, N. Y.
New York City: Grand Central Terminal.
Annual Subscription, \$6.00. Single Copies, 15 Cts.

SCIENCE is the official organ of the American Association for the Advancement of Science. Information regarding membership in the Association may be secured from the office of the permanent secretary, in the Smithsonian Institution Building, Washington, D. C.

Entered as second-class matter July 18, 1923, at the Post Office at Lancaster, Pa., under the Act of March 8, 1879.

FIFTY YEARS' PROGRESS IN ELECTRICAL COMMUNICATIONS¹

STEPHEN GRAY AND FRANKLIN

It is now two hundred years since Stephen Gray discovered that an electrical charge will move with great rapidity along certain substances, called conductors to-day. The motion of electricity began then to attract the attention of the natural philosopher, and it became the subject of many scientific researches, particularly after Franklin had demonstrated that lightning is a motion of electricity. There is no doubt that many a scientist of Franklin's time associated with the destructive power of lightning something resembling the destructive power of a projectile, something endowed with an irresistible momentum. But who would have dared to suggest in those days that moving electricity just like moving matter had a momentum? Nobody suspected in those days that the history of the electrical science of the first half of the nineteenth century would be a record of the gradual evolution of this electrical momentum concept. Oersted's discovery, in 1819, of the magnetic field of force accompanying the motion of electricity marks the first step in the progress of that evolution.

MAXWELL'S CONCEPT OF THE MOMENTUM OF MOVING ELECTRICITY

Faraday was the first to recognize that the magnetic field accompanying moving electricity, and every other magnetic field, gave to the space occupied by it a new physical state; he called it the electrotonic state and saw in the electrical forces of induction which he had discovered a manifestation of the electrical reaction opposing the change of the electrotonic state. Finally the genius of Maxwell succeeded in revealing in Faraday's electrotonic state the momentum of moving electricity. This is one of the two fundamental concepts in Maxwell's electromagnetic theory, and it was destined to play the leading part in the development of the electrical science as well as of the electrical art of telegraphy and telephony. Maxwell showed that the magnetic flux associated with moving electricity is the momentum of that motion, and that the electrical forces discovered by Faraday

¹ Address of the retiring president of the American Association for the Advancement of Science, Philadelphia, December 27, 1926.

National Research Council NATIONAL RESEARCH FELLOWSHIPS IN THE BIOLOGICAL SCIENCES

Post-doctorate fellowships in the Biological Sciences (Zoology, Botany, Anthropology, and Psychology) will be assigned by the Board of National Research Fellowships in the Biological Sciences for the academic year 1927-28 at two meetings of the Board, one to be held on February 4 and 5 and the other in May or June. Applications should be filed before January 1st and April 15th, respectively, in order to insure consideration at the following meeting. Appointments may be made prior to the conferring of the doctor's degree, to be effective upon the receipt of the degree within six months. Forms of application and statement of conditions will be furnished on application by letter or by wire to

The Secretary, Board of National Research Fellowships in the Biological Sciences, National Research Council, Washington, D. C.

School of Medicine

NEW ADMISSION REQUIREMENTS

At least three years of approved college work including specified requirements in the sciences.

DEGREE OF B.S. IN MEDICAL SCIENCE

This degree may be awarded at the end of the third or fourth year to students fulfilling certain conditions including the preparation of a thesis.

DEGREE OF DOCTOR OF MEDICINE

Upon satisfactory completion of prescribed four-year course.

For catalogue and information, address
THE DEAN, Washington University
School of Medicine, St. Louis,
Missouri

ANNOUNCING THE NEW IMPROVED TYPE EARTH INDUCTOR

The outstanding feature of this apparatus is the great permanency in construction and the simplicity of operation.

The apparatus consists of a large coil of 1000 turns wound on a magnelium bobbin. The coil is mounted in a strong brass frame which is fitted with a substantial hinge and attached to a heavy brass tripod. The hinge permits the setting of the coil in vertical and horizontal position for determining the corresponding components of the earth's magnetic field. The apparatus is equipped with two non-magnetic springs which uniformly rotate the coil about its diameter through 180 degrees. The automatic stops and release are conveniently arranged, thereby eliminating the danger of overwinding the springs or winding in the wrong direction.

UNDER THE EDITORSHIP OF J. McKEEN CATTELL

SCIENCE

A weekly journal, established in 1883, devoted to the advancement of the natural and exact sciences, the official organ of the American Association for the Advancement of Science, generally regarded as the professional journal of American men of science.

Annual Subscription \$6.00; single copies 15 cents.

SCHOOL AND SOCIETY

A weekly journal covering the field of education in relation to the problems of American democracy. Its objects are the advancement of education as a science and the adjustment of our lower and higher schools to the needs of modern life.

Annual Subscription \$5.00; single copies 15 cents.

THE SCIENTIFIC MONTHLY

An illustrated magazine, continuing the editorial policies of The Popular Science Monthly established in 1872, devoted to the diffusion of science, publishing articles by leading authorities in all departments of pure and applied science, including the applications of science to education and society.

Annual Subscription \$5.00; single copies 50 cents.

THE AMERICAN NATURALIST

A bi-monthly journal established in 1867, devoted to the biological sciences with special reference to the factors of organic evolution.

Annual Subscription \$5.00; single copies \$1.00.

AMERICAN MEN OF SCIENCE

A BIOGRAPHICAL DIRECTORY

A fourth edition of this book is now in preparation. There are only left about fifty copies of the third edition which is an invaluable work of reference for libraries and for all having relations with scientific men. The first and second editions were sold out before a new edition was printed. There are many who need the third edition and should order it now.

Price: Ten Dollars, net, postage paid.

Announcement

The new and enlarged headquarters of The Kny-Scheerer Corporation of America will be at 10-14 West 25th Street and 9-11 West 24th Street, near Broadway. Our factory and large store-rooms are located in Newark. We expect to complete arrangements and exhibitions in our new quarters by February 15th, 1927. Business will be conducted at 119-25 Seventh Avenue up to January 25th, 1927. We cordially invite our friends to call upon us at our new offices and show rooms.

Patent Applied For

LaMotte Roulette Comparator

Appreciation of the importance of Hydrogen Ion Control is growing rapidly in many branches of industry as well as in scientific circles.

To meet an ever-increasing demand for practical information on the subject, we have recently issued "The A B C of Hydrogen Ion Control" which gives a complete explanation of this method for both the technical and non-technical worker, with numerous examples of actual applications.

A copy will be sent you on request.

A Steady Stream of Bubbles

with the

Hoke-Phoenix Regulator

With a Hoke-Phoenix Regulator (pressure reducing valve) you can have exactly the pressure you want—high or low—all the time. No spurting, no sucking back, no waste of time or reagents.

Valuable in pH work, spraying, combustions, calorimetry, etc. Used by Columbia, Edgewood Arsenal, various U. S. laboratories, etc.

Ask us about commercial-size tanks; you will be surprised at their availability everywhere, and their economy even for small users.

Mention type of work you are doing.
