RICE'S

ORGANIC CHEMISTRY

Especially designed for students in applied biological fields: agriculture, home economics, medicine, dental science, pharmacy and veterinary medicine

By FRANK E. RICE

Professor of Chemistry, North Carolina State College

303 pages, 5 x 8, 29 illustrations. \$2.50

(International Chemical Series)

Arkansas Polytechnic College University of Georgia Illinois Wesleyan University Lincoln College University of Louisville University of Maine University of Minnesota College of St. Catherine North Carolina State College Catawba College

North Dakota Agricultural College Muhlenberg College Dickinson College Waynesburg College Tennessee College Brigham Young University University of Vermont Virginia State Teachers College Washington State College University of Wyoming

N this book the principles and fundamental laws of organic chemistry are thoroughly presented; yet they have not been made an end in themselves but a means to the better understanding of the activities involved in plant and animal life and of the substances met with by the physician, pharmacist, dietitian and home maker.

The material is so arranged that special topics appealing to only one class of students may be omitted without destroying continuity.

At the end of each chapter suggested experiments are included.

CHAPTER HEADINGS

- I.—Organic Chemistry; What It Is. II.—Methane and Derivatives. III.—Valence and Molecular Structure. IV.—Pithane and Derivatives. III IV.—Ethane and Derivatives.
 V.—Hydrocarbons.
 VI.—Halogen Derivatives of the Hydrocarbons (Organic Radicals).
 VII.—Alcohols.
 VIII.—Ethers. XII.—Ethers.
 IX.—Aldehydes and Ketones.
 X.—Optical Activity.
 XI.—Carbohydrates.
 XII.—Cellulose and the Compound Carbohydrates. -Simple Acids. -Esters XV.—Fats and Allied Substances.

XVI.—Alcohol, Aldehyde, and Ketone Acids. XVII.—Amino Acids. XVIII.—Proteins.

- XIX.—Amines and Related Compounds. XX.—Amides.

- XX.—Almides. XXI.—Cyanides and Related Compounds. XXII.—The Benzene Series. XXIII.—The Pyrrole and Indole Rings. XXIV.—The Pyridine and Quinoline Rings (Alkaloids). XXV.—Purines and Pyrimidines.

- XXVI.— Terpenes and Related Compounds (Es-sential Olls). XXVII.—Organic Compounds of the Metals and of Sulfur (Chemotherapy). XXVIII.—Substances of Unknown Composition.

\mathcal{A} NNOUNCEMENT

of the

FRANCIS BACON AWARD

Sponsored by The Forum MAGAZINE and SIMON AND SCHUSTER, INC.

SEVEN THOUSAND FIVE HUNDRED DOLLARS

for the outstanding work of non-fiction in the coming year which, in the famous phrase of Professor James Harvey Robinson, best "carries on the conscious adventure of humanizing knowledge."

NE of the most significant trends in literature, of recent years, has been the ever-widening audience that has arisen for distinguished and authentic works of science, history, sociology, philosophy, psychology and biography. Curiosity about the world in which we live is, apparently, deeper and keener than ever before. There has been evident an insistent demand from the public for the humanization and clarification of specialized knowledge. The Francis Bacon Award has been instituted to foster this clearly valuable tendency. The selection each year of such a work will unquestionably be an event of the first importance in the world of letters. In addition to the money award of seven thousand five hundred dollars, an emblematic medal will be struck off each year and presented to the winning author.

THE JURY OF AWARD WILL INCLUDE:

DR. GEORGE A. DORSEY	DR. WILL DURANT	DR. HENRY GODDARD LEACH					
Author "Why We Behave Like Human Beings"	Author of "The Story of Philosop	Editor of "The Forum"					
DR. EDWIN E. SLOSSON Author of "Creative Chemis		EM VAN LOON of Mankind''					
COUNT HERMANN KEYSERLING							
THE COUNCIL OF SPECIALISTS WILL INCLUDE:							
Dr. JAMES HENRY BREASTED D.	R. EDWARD GRANT CONKLIN	PROFESSOR JOHN DEWEY					
of the University of Chicago	of Princeton University	of Columbia University					
DR. VERNON LYMAN KELLOGG	FRANK JEWETT MATHER	DR. HARLOW SHAPLEY					
Director National Research Council	of Princeton University	of Harvard University					

For details about the method of procedure to be followed by contestants, address the Francis Bacon Award, care of Simon and Schuster, Inc., Publishers, 37 West 57th Street, New York City or care of The Forum, 441 Lexington Avenue, New York City.

SCIENCE: A Weekly Journal devoted to the Advancement of Science, edited by J. McKeen Cattell and published every Friday by

THE SCIENCE PRESS

New York City: Grand Central Terminal. Lancaster, Pa. Garrison, N. Y.

Annual Subscription, \$6.00. Single Copies, 15 Cts. SCIENCE is the official organ of the American Association for the Advancement of Science. Information regarding membership in the Association may be secured from the office of the permanent secretary, in the Smithsonian Institution Building, Washington, D. C.

Entered as second-class matter July 18, 1923, at the Post Office at Lancaster, Pa., under the Act of March 8, 1879.

OBJECTIVE AND HUMAN PHYSICS

THE twofold view of nature is as old as theoretical physics. The picture in which nature presents itself to the observer is complicated; but Democritus, the great Greek thinker, had already recognized that this complication is only apparent, and the result of the peculiarities and limitations of the human senses. It was the idea of Democritus that the picture of nature to which true thinking leads must be of much greater simplicity than that which man receives through his senses. The necessary condition for the simplification of physics had therefore to consist in the liberation of physics from all human, from all subjective, points of view.

Democritus also recognized that the objects of the simplest physical events must be much smaller than any object amenable to sense-perception. The exploration of hidden atomic events thus became the essential aim of objective physics.

As soon as the true size of atoms was evaluated by exact methods, the primarily speculative hypothesis became exact scientific knowledge. To-day we can determine the mass of atoms with comparatively greater accuracy than the mass of the earth. Not only through one but through the most varied and independent methods the characteristic constants of atoms can be determined in the most accurate manner; and all these methods, independently of each other, have led to the same values. If it can be regarded as an argument for the existence of our external world that the sensations of sight, hearing and touch all lead us to infer the existence of the same objects, then theoretical physics has certain proof of the real existence of atoms in the fact that their characteristic constants, as obtained by fundamentally different methods, have nevertheless always the same values.

Modern physics, based on the exploration of atomic processes, has revealed to us a picture of nature of great simplicity. It has clearly shown that it is not nature that is complicated, but only the path leading to a knowledge of it, and that this path consists in the gradual transformation of the subjective world-picture into an objective one.

But if the objective picture be the true one, then it should also be possible inversely to construct the subjective human picture from the objective one. We can then raise the question of how, under given powers and limitations of the human senses, nature may reappear in a picture produced by these senses. We

Castle Incubators are Ventilated by Heated Air

Success in incubation year in and year out depends upon absolute constancy and uniformity of temperature.

Castle triple walled incubators give this surety because:

- 1. Combination of water and air jackets prevents temperature fluctuation.
- 2. Continual circulation of freshly heated air prevents one part of chamber being at a higher or lower temperature than standard.

These are the finest examples of scientific incubator manufacture. They are made in many sizes and models. Ask for the Incubator Bulletin which gives specifications and prices.

No. 550, Inside Dimensions 28'' high x 18'' wide x 14'' depth

THE STANDARD WHITE RAT

Mus Norvegicus Albinus

We maintain the largest commercial colony of White Rats in the United States, confining our efforts solely to the breeding, raising and selling of a Standard Albino Rat. A standard animal enables biologists in different sections to obtain comparable results.

A BREEDING STOCK OF 2,000 AND A SALES STOCK OF 20,000 CONSTANTLY MAINTAINED BY A WEEKLY OUTPUT OF 1,500 to 2,000 insures prompt and satisfactory execution of all orders.

Prices on Lots of 50 or more

BREEDING STOCK	GRADE A-M & F	\$1.75	each
TOXICITY SIZE	100-150 Gm.	.75	66
MEDIUM SIZE	80-100 Gm.	.70	66
SMALL SIZE	50- 80 Gm.	.65	66
VITAMINE SIZE	30- 50 Gm.	.60	"
LITTERS-known age,	with Mothers (8 to 16 to litter)	1.00	"

Prices for Lots less than 50 furnished on request

All Shipments via Express Prepaid

Orders of less than 50 animals, express charges and crating will be at the expense of consignee and will be charged on invoice.

Orders of 50 or more, express charges and crating at our expense when the same does not exceed \$5.00 per hundred animals. Any excess of this amount will be charged on invoice.
