Lancaster, Pa. Garrison, N. Y.
Annual Subscription, \$6.00. Single Copies, 15 Cts.

SCIENCE is the official organ of the American Association for the Advancement of Science. Information regarding membership in the Association may be secured from the office of the permanent secretary, in the Smithsonian Institution Building, Washington, D. C.

Entered as second-class matter July 18, 1923, at the Post Office at Lancaster, Pa., under the Act of March 8, 1879.

HOSPITAL AND LABORATORY¹

THE formal opening of this hospital and clinic is significant of something of far greater importance than throwing open the doors of a new building which is imposing and beautiful in its architectural details and perfectly adapted in its plan and equipment to the purposes for which it is intended. This occasion signalizes the inauguration of a great experiment, for which the erection of this magnificent building, the installation of the splendid equipment, and the gathering together of the trained men who are to work within its walls represent but the collection of utensils and apparatus to be used in the performance of the test. That such elaborate plans should have been prepared indicates that those who have been responsible for this great undertaking possess a profound and abiding conviction and belief in the probable correctness of the idea, the truth or falsity of which is to be tested. These intrepid innovators believe that that branch of knowledge which has to do with disease in man has reached a stage in its development which entitles it to occupy a dignified and important place in the group of subjects which the university considers its domain. The fund of information concerning disease has grown to a sufficient bulk, the methods devised for its investigation have become sufficiently accurate, the subject itself is of sufficient interest, and its importance in all that relates to human welfare is sufficiently great to justify the prosecution of its study as an aid in the interpretation of nature, and not, as in the past, only as a part of the discipline required for engaging in a practical profession. This idea is not new, it did not originate in the minds of those responsible for this experiment, it did not spring forth fully formed like Minerva from the head of Jove. There have been many preliminary experiments, *Vorversuche*, but here in this relatively young university, which has been the cradle of so many fruitful innovations in the field of education, this idea is to receive a trial with facilities worthy of the importance of the issue.

It is especially appropriate that this experiment should be made in this great institution whose own commencement involved not one, but many experiments. President Harper early spoke of this univer-

¹ Address delivered at the dedication of the Albert Merritt Billings Hospital and the Max Epstein Clinic of the University of Chicago, November 1, 1927.

*Just Out***A Popular Guide
to Radio - \$3.50**BY B. FRANCIS DASHIELL
U. S. Weather Bureau

The latest, most up-to-date, and thorough treatment of modern radio.

Presents a narrative of the growth of radio—of the principles underlying its operation—of apparatus and equipment—of weather effects—and practical aspects of building, operating, patenting radio sets, etc.

A book, in short, for every radio 'fan' and many who aren't. A fascinating story of scientific progress.

Cloth 276 pp. 101 diagrams 8 plates

*Published in November***Dictionary of Bacteriological
Equivalents \$4.00**BY WILLIAM PARTRIDGE, F.I.C.
*Formerly lecturer in Chemistry, King's College,
University of London*

A desk manual presenting 2400 French-English, 2600 German-English, 1200 Italian-English, and 1600 Spanish-English equivalents. Invaluable to every biologist and bacteriologist.

*Coming in January***The Rise of Modern
Physics - . . . \$4.00**BY HENRY CREW
Professor of Physics, Northwestern University

A stimulating and authoritative narrative of the development of modern physics, and of the evolution of physical theories. A book of wide cultural value and scientific interest by a leader in the field and a writer of great charm.

Cloth 324 pp. 36 illustrations

*Order From***The Williams & Wilkins Company***Publishers of Scientific Books and Periodicals
Baltimore, Maryland***School of Medicine****NEW ADMISSION REQUIREMENTS**

At least three years of approved college work including specified requirements in the sciences.

**DEGREE OF B.S. IN MEDICAL
SCIENCE**

This degree may be awarded at the end of the third or fourth year to students fulfilling certain conditions including the preparation of a thesis.

DEGREE OF DOCTOR OF MEDICINE

Upon satisfactory completion of prescribed four-year course.

For catalogue and information, address
THE DEAN, Washington University
School of Medicine, St. Louis,
Missouri

**THE ANALYSIS
OF MATTER***By Bertrand Russell*

Can the world disclosed by modern physics be reconciled with the world revealed by common sense? Such is the problem which Mr. Russell tackles in this volume, a companion one to *The Analysis of Mind* which he published in 1921. \$6.00

**THE STRUCTURE
OF THE ATOM***By E. N. da C. Andrade*

Completely rewritten and revised. *Nature* has said: "It provides just that critical introduction to modern atomic speculation which should be in the hands of every student, and can be read with profit by most researchers." \$10.00

The Best Gift for Christmas

that expresses so well the sincere good wishes of the giver—that will be a delight this Christmas, and still a delight next Christmas and for many years more.

WEBSTER'S

New International Dictionary

is praised by Supreme Court Judges, Presidents and Department Heads of leading Universities, Colleges, and Normal Schools, the Government Printing Office and high officials in all branches of the Government.

A Library in One Volume

In its 2,700 pages there are 452,000 entries, including 408,000 vocabulary terms; 32,000 geographical subjects; 12,000 biographical entries; 100 valuable tables; over 6,000 illustrations. Constantly kept up to date.

Thousands of New Words

that have recently come into use are included: audion, Freud, Coolidge tube, Fascisti, radiophone, aerograph, eugenism, helicopter, Stalin, etc. Send for FREE, new richly illustrated pamphlet containing sample pages.

Selections from the Brontes

Edited by H. A. TREBLE

This book contains selections from the novels of Charlotte and Emily Bronte. Its purpose is not only to illustrate the style of the writers but to interest readers to read the novels. There is a critical introduction preceding the selections. \$1.40

On Stimulus in the Economic Life

By SIR JOSIAH STAMP

This is the Rede Lecture at Cambridge University for 1927. The economic life is considered as a complex reaction between a physical world and living organisms, obeying more elusive psychological principles, the whole relationship being worked upon by individual and mass spiritual forces. This lecture is an examination of the stimuli which affect the economic life through these spheres. \$1.25

Nine Essays

By ARTHUR PLATT

Preface by E. A. Houseman.

A group of essays on a wide variety of topics and persons, by the professor of Greek at the University College, London. *Science and Art among the Ancients*, *Edward Fitzgerald*, *La Rochefoucauld*, *Cervantes*, and *The Relation of Poetry and Science* are some of the subjects included. \$3.40

The Life of Sir Albert Hastings Markham

By M. E. and F. A. MARKHAM

This biography of the explorer and admiral who died in 1916 recounts the story of the "Alert" expedition to the North Pole and his voyages and travels in the Kara Sea, the Pacific, North America and other parts of the world. \$6.00

The Place-Names of Worcestershire

By A. MAWER and F. M. STENTON

This survey of place-names in the county of Worcester has been carried out on the lines established and made familiar in previous volumes. It deals with a whole series of unexplained names and completes the study of the Roman Roads in Britain in dealing with the Foss Way. A colored map is included. \$6.50

David Hume and the Miraculous

By A. E. TAYLOR

This is the Leslie Stephen lecture for 1927, in which Mr. Taylor discusses the section dealing with miracles in David Hume's *Enquiry Concerning Human Understanding*. \$1.00
