QUOTATIONS

THE DETROIT SESSION OF THE AMERICAN MEDICAL ASSOCIATION

THE multitude of provisions for instruction and entertainment at the Detroit session was perhaps the most striking feature of the annual session of the association just held in that city. Some activity was scheduled for satisfactory use of every moment of the visitor's time, and it remained only for him to employ his time to his own best advantage. From the first two days, during which a series of extraordinary clinical lectures and talking motion pictures were available, to the last three days, in which the fifteen scientific sections provided more than three hundred manuscripts on various phases of medical progress, scientific discourse occupied the auditorium and the halls in the Masonic Temple. At the same time, the greatest number of scientific and technical exhibits ever assembled under the auspices of the association held forth in every available space on several floors in the same building. For the evening the Michigan State Medical Society provided a past-presidents' dinner for the opening night, given exclusively for the officers and the House of Delegates; the opening meeting with the presentation of emblems to past-presidents took place on Tuesday night; numerous fraternity and other social entertainments were held on Wednesday; the president's reception on Thursday, and boat rides, motor bus trips and private tours were provided by the Local Committee on Arrange-

ments for the intervening periods, if any. Obviously, complete utilization of such provisions placed a tax on the physical endurance of the convention guest, and a course of rest and physical training in anticipation of the session was almost necessary to enable the too enthusiastic conventionist to survive successfully the session's attractions. The meetings of the House of Delegates were marked primarily by the demonstration of confidence in the work of the Board of Trustees and by special interest in the economic problems affecting the progress of medicine to-day. Thus, resolutions concerning the care of veterans' legislation, federal aid on maternal welfare, mental hygiene, and similar problems dominated the picture. It is significant that the resolution concerning aid for veterans adopted by the House of Delegates was specifically referred to by the President of the United States in his message vetoing the veterans' bill. The attendance of more than five thousand physicians in a time of financial stress indicates the manner in which the medical profession accepts the importance of this annual session. The appreciation of all of those who attended must be tendered to the Local Committee on Arrangements, which contributed freely of its funds, its time and its efforts to build the success of the meeting. The hospitality shown has established the profession of Detroit in the affections of the Fellows of the American Medical Association.—*Journal of the American Medical Association*.

SOCIETIES AND MEETINGS

THE HISTORY OF SCIENCE SOCIETY MEETING IN DURHAM, NORTH CAROLINA

THE History of Science Society met concurrently with the American Historical Association at the forty-fourth annual meeting at Durham and Chapel Hill, North Carolina, on December 30 and 31, 1929, and January 1, 1930.

This is the tenth anniversary of the History of Science group of the American Historical Association which was inaugurated in 1920 by Dr. Lynn Thorndike, of Columbia University, president of the History of Science Society. The following year a similar section was instituted by the American Associa-

tion for the Advancement of Science at the Chicago meeting with the late Dr. William A. Loey as chairman of the committee, later vice-president of Section L.

The interest in the history of science movement has grown so steadily ever since that finally both groups were combined to form the History of Science Society, under the direction of Dr. David Eugene Smith at Columbia University in 1924. The society now enjoys its sixth anniversary, and a membership close to seven hundred, consisting of many of the most distinguished scholars and scientists of the world.

The short program presented at Durham on January 1 was entirely devoted to the history of early
