

MICROMAX

THE IMPROVED L & N RECORDER

Advantages

1. *Greater Sensitivity*
2. *Higher Speed*
3. *Automatic Standardization of recording potentiometers*

THE new Micromax balancing device will detect deflections of the galvanometer pointer amounting to 1/1000th of an inch. It is unaffected by wear. It requires no adjustments. It makes the recorder action so fast that the pen or print-wheel on a Micromax Recorder will step across the entire 9½ inches of calibrated chart in less than twenty-two seconds.

Not only is the machine rapid and super-sensitive, but pen steps are closely related to the extent of changes, as indicated by the extent of galvanometer deflection. Its non-slip clutch is automatically prevented from attempting to move the mechanism beyond either end of the scale.

In Micromax recording potentiometers, the measuring current is automatically standardized every 45 minutes or less—a great help to the busy laboratory technician.

"Micromax" is immediately available in all Models.

Osteological Preparations

We have a large stock of mounted skeletons for comparative study or museum exhibition. The prices have been greatly reduced. Now is the time to replenish your specimens for the coming year. We suggest ordering this material early as there are only one or two of a specimen.

Human Skeletons	\$ 75.00 to \$125.00
Gorilla, female perfect	350.00
" male disarticulated	275.00
Cynocephalus sp. Baboon	22.50
Nycetes niger—howling monkey	20.50
Cebus sp.	13.50
Macacus—rhesus—monkey	18.50
Hylobates sp. Gibbon	50.00
Lichonatus brevicaudatus	60.00
Lemur varius—lemur	17.50
Lemur mongoz—lemur	17.50
Propithecus diadema—lemur	30.00
Propithecus coronatus—lemur	30.00
Canis familiaris dog, according to size	12.00 to 20.00
Propithecus edwardsii	30.00
Felis domesticus cat	8.50
" " " disarticulated	5.00
Vulpes vulgaris—fox	15.00
Phoca vitulina—seal	55.00
Erinaceus europaeus (hedgehog)	8.00
Talpa Europea (mole)	8.00
Lepus sp. rabbit	8.00
Angulata sp. cow	55.00
Sus scrofa—pig	50.00
Gnu—white tailed	60.00
Hyrax—cony	25.00
Dasybus—Edentata	7.50

Birds skeletons—many species,
from \$4.50 to \$20.00

Please send your list of desiderata for our prices.

Specialists

The Compton Spectrometer

When the world's leading physicists wish to secure measurements of the greatest precision, they consult with the Société Genevoise d' Instruments de Physique—specialists in the field of accurate measurements for more than 70 years.

The Compton X-ray spectrometer illustrated is typical of their work. It was built in an effort to increase the precision of X-ray diffraction measurements. Careful attention was paid to the design of all features so as to secure the maximum sensibility.

Laboratory tests showed that readings could be relied upon—*without corrections*—within one second. With the aid of this instrument wave lengths have been calculated to $\pm .002$ milliAngstroms.

Ask for a copy of catalog #405-B which shows more quality instruments for laboratory use.

To Assist You in Research

The following materials, instruments, and devices perfected through G-E Research are offered to industrial and other laboratories engaged in scientific study and experiment.

Type M Vacuum Gauge—Accurately measures vacuums from 200 microns to $\frac{1}{2}$ micron. Scale is marked directly in microns to dispense with mathematical calculations.

Mercury-vapor Detector—For measuring the concentration of mercury vapor in any locality.

Boroflux—A deoxidizer used in the manufacture of mechanically sound copper castings of high electrical conductivity.

Clear Fused Quartz—An essential item in all research laboratories. Rods, tubes, discs, cylinders, and blanks for prisms and lenses are available from stock.

Vacuum Tubes for general laboratory experimental work such as:

Low-grid-current Tubes—Especially useful for measuring extremely high resistances or low currents. Currents as low as 10^{-17} ampere can be measured.

Thyratron—A hot-cathode arc in mercury vapor, with the passing arc current controlled by a grid. With this tube it is possible to control many amperes of plate current by a very small grid voltage.

Photoelectric Tube—A light-sensitive unit. The current flowing through the tube is proportional to the amount of light transmitted through the tube window.

High-voltage Rectifier Tube—For high voltage direct-current testing; for precipitation of smoke and dust; for electrostatic separators; for furnishing high voltage direct-current to x-ray tubes; and for laboratory experiments.

General Electric is glad to assist investigators with special problems the solution of which may be facilitated by knowledge of the above equipment. To avail yourself of this service, address Special Products Section, Schenectady, N. Y.

The "POINTOLITE" LAMP

150 c. p. A. C.
"Pointolite" Lamp
Diameter of bulb
3 inches

gives a steady and brilliant light from
a very small source

THE light from the "Pointolite" Lamp comes from a very small, white-hot bead of tungsten. As the bead remains in a fixed position after the lamp is started, it can be placed right at the focus of a condensing lens or other optical system. There is no flicker; the field of illumination is distributed evenly; and the lamp requires no attention whatever after starting.

"Pointolite" Lamps are giving excellent results in many lines of scientific and laboratory work—particularly in conjunction with photomicrographic outfits, projection microscopes, photometers, galvanometers, etc. For d.c. circuits "Pointolite" Lamps are made in 30, 100, 500 and 1000 c.p. sizes, while for alternating current we have the 150 c.p. lamp here illustrated.

*New Tests show the superlative features
of the famous Castle 554 Incubator*

- 1° ± **Uniformity:** Never more than one degree variation between top and bottom of chamber.
- 1/5 to 1/10° ± **Constancy:** Never more than a fraction of a degree variation at the thermometer. This accuracy of temperature holds up to a room temperature of 95° F.
- 98% **Usable Capacity:** Practically no space in chamber is wasted by heaters or controls. Four removable shelves.
- Air Circulation:** Fresh circulating air is admitted through tube that passes through water jacket. Thus air is pre-heated.
- Quality:** Incubator is triple walled—outer jacket for air, inner for water. 20 to 24 oz. copper used. Positive electric regulator, capsule type. Heaters are nichrome wire or mica, bolted to bottom. Two outer doors are air-jacketed, inner doors are glass.

Write for Incubator bulletin.

NEATNESS « « ORDER « « CLEANLINESS
 these attributes of the efficient laboratory are made possible through the use of
INDIVIDUAL SPECIMEN JARS of CLEAR WHITE GLASS

No. 8042

Specimen jars of brilliant, clear, white glass lend an atmosphere of neatness, order and cleanliness to the biological laboratory. Their expense in the past has frequently prevented their use. This objection is now eliminated by the new low prices, made possible through a large and favorable purchase, at which the Central Scientific Company is able to offer these jars of highest quality to the biological laboratory.

An assortment of sizes provides the selection of jars best suited for each purpose. We especially recommend No. 8042E for the building of a small aquarium or for the growing of small biological specimens such as amoebae, paramoecium, euglena, etc. Should it be desired to cover these jars, we recommend the use of our No. 3828 Crystallizing Dishes for all but the No. 8042E size. The lid of No. 3599C is adequate for the No. 8042E jar.

PLANT SCIENCES IN THE SHEFFIELD SCIENTIFIC SCHOOL¹

By Professor RUSSELL H. CHITTENDEN

YALE UNIVERSITY

As a noted English scientist, Sir Walter Fletcher, has said recently, "In the field of research the whole body of knowledge has been advancing so fast that the individual workers, at their various points on its growing borders, are in danger of becoming so far separated one from another in the very course of their advance as to lose the fertility that comes from the easy exchange of ideas and methods." Hence, the value of such gatherings as this, by which workers in specialized fields can compare methods and results, gain perhaps added enthusiasm and encouragement, and go forth with renewed vigor in the prosecution of their own particular studies.

As a physiological chemist I like to think in broad terms of physiology as a study of the functions of living organisms, animal and vegetable; a study of

¹ An address delivered at the Conference for Investigators Interested in the Chemistry and Physiology of Plants, at New Haven, Connecticut, June 5, 1931.

the functions of living matter irrespective of its origin. Differentiation of these functions, as we all know, is determined largely by the character of the methods that have to be followed in their study. Thus, we emphasize chemical physiology and physical physiology mainly because the functions concerned are explainable by chemical laws or by physical laws, their study involving on the one hand the intricate methods of the chemist, while on the other the methods of the physicist are called for. Again, we stress the terms animal and plant physiology, recognizing thereby the innate differences in function characteristic of the two forms of life, understanding full well that in the higher forms individual functions can be studied successfully only by different technical methods applicable to each type. If we talk about physiological chemistry or biochemistry we are giving expression to the fact that owing to deepening knowl-

HUMAN HEREDITY

By ERWIN BAUR, M.D., EUGEN FISCHER, M.D. and
FRITZ LENZ, M.D.

Translated by Eden and Cedar Paul

Third ed., cloth, 8vo, 734 pp., \$8.00

This new edition is one which will be welcomed by everyone interested in the broad aspects of this subject. Additions have been made concerning the various forms of bodily structure or types of constitution and also concerning the so-called blood groups. The section on genealogical trees and the inheritance of intellectual gifts has been enlarged. A book for the student of heredity and the intelligent reader alike.

The book is divided into five sections as follows: Section I. Sketch of the General Theory of Variation and Heredity; Section II. Racial Differences in Mankind; Section III. Morbific Heredity Factors; Section IV. Methodology; and Section V. The Inheritance of Intellectual Gifts.

NEW (3rd) EDITION

JUST READY

A Manual of CLINICAL LABORATORY METHODS

By CLYDE LOTTRIDGE CUMMER, Ph.B., M.D.

Formerly Associate Professor of Clinical Pathology,
School of Medicine, Western Reserve University;
Instructor in Dermatology and Syphilology,
School of Medicine, Western Reserve University;
Visiting Dermatologist, St.
Alexis and Charity Hospitals,
Cleveland, Ohio

*Enlarged and thoroughly revised. Octavo, 585 pages
with 173 engravings and 12 plates. Cloth, \$6.75, net*

This thoroughly revised third edition makes this manual more useful than ever before as a text-book for students and a guide for physicians and laboratory technicians. The methods are presented in the most concise and accessible form. Each chapter offers an outline of the routine examinations and descriptions of the simpler qualitative and quantitative methods, as well as those of more intricate technique.

NEW WORK

IN PRESS

A Text-Book of NEURO-ANATOMY

By ALBERT KUNTZ, Ph.D., M.D.

Professor of Micro-Anatomy in St. Louis University
School of Medicine

Octavo, about 320 pages. Illustrated with 197 engravings. Ready this fall.

In this new and important work Dr. Kuntz avoids the common difficulties which the student ordinarily experiences. Unnecessary minutiae are omitted, the anatomical details are correlated with the fundamental structural plan of the nervous system and the anatomical structure of its parts is discussed in the light of developmental and physiological relationships. Here is the complete picture of the nervous system as a working machine. The book is based on the successful teaching experience of a recognized authority.

THE WISTAR INSTITUTE BIBLIOGRAPHIC SERVICE

A condensed summary of each paper appearing in the journals listed below is issued prior to publication of the article in full. This distribution of abstracts enables a biologist to familiarize himself with *contemporary research* in a minimum of time, and to select the articles which he wishes to purchase in reprint form. To receive these abstracts he may subscribe to the Advance Abstract Sheets or to the Bibliographic Service Cards.

The Advance Abstract Sheets are issued twice a month, each sheet containing ten or more abstracts, together with the price per reprint. Subscription rate is \$3.00 per year.

The cards also are issued twice a month. In addition to the abstracts, the cards provide subject headings and complete bibliographic reference. The cards are convenient for filing and library records. Price, \$5.00 per year.

At regular intervals the abstracts are assembled and published in book form with complete authors' and analytical subject indices. Price, \$5.00 per volume.

MERCK'S INDEX an Encyclopedia of Drugs and Chemicals

"One of the best handbooks for the advanced student and analyst that was ever compiled. It might well be termed a desk edition of Beilstein, a companion for the expert . . . The references to chemical substances note the atomic arrangement, contain brief descriptions of the properties . . . Special attention should be called to a list of indicators for determining pH concentrations; a short section on qualitative reactions of acids, bases, metals, and salts; reactions of the more important alkaloids and glucosides; and a list of atomic weights brought down to 1929."—*Industrial and Engineering Chemistry*.

4th edition, 1930, 585 pages. 6½ x 9¼ inches. Fabrikoid leather. \$5.00; discount of 50 per cent (\$2.50) to members of and those associated with the chemical and allied professions.
