The Printing of SCIENTIFIC PUBLICATIONS

The Science Press Printing Company has been established and equipped for printing scientific literature in the best way, with compositors, pressmen and proof-readers trained for technical work. It is a business corporation but it has been founded to provide facilities essential for the advancement of science.

The corporation owns its building at Lancaster, Pennsylvania, over 14,000 square feet of floor space lighted on all sides, with space for printing a hundred scientific journals. It has the best obtainable presses, composing machinery and binding equipment. What is more important, it has the most competent pressmen and compositors in a city which, since "Science" was first printed there in 1894, has become a center for fine scientific printing. The costs are much less than in the large cities.

The press prints "The Scientific Monthly," "Science," "School and Society," "The American Naturalist" and some twenty other scientific journals and publications. The typography and presswork of these journals will bear comparison with any weekly or monthly publication, although, for example, "Science" must be printed mostly in one day in an edition of over 14,000. The new edition of "The Biographical Directory of American Men of Science" is an example of the work of the press. It can, to special advantage, print scientific monographs and doctorate dissertations.

Samples of work and estimates of costs will be supplied on application.
