NEW!

General Purpose Electric Heater

152-01

The new heater illustrated combines economy of operation with economy of cost. The heating coil is held in a cone-shaped refractory that directs the heat upward; heavy thermal insulation and a dead-air space reduce radiation losses to a minimum.

Heating coils are retained in slots in the refractory, deep enough to protect them from mechanical injury; and replacements are made by lifting the element from the slots, and substituting a new coil. Because the refractory is not discarded with the heating element, the cost of replacements is kept low. Openings: $3\frac{1}{8}$ ", $2\frac{1}{8}$ ", $1\frac{1}{4}$ ".

Price, 350 watt heater, 110 or 220 v. \$6.50
Replacement heating element 1.00

AMERICAN MEN OF SCIENCE

A Biographical Directory

Edited by

J. McKeen Cattell and Jaques Cattell

The fifth edition of the Biographical Directory of American Men of Science contains about 22,000 sketches and extends to 1278 pages. It is an invaluable work of reference for scientific men. It is useful for libraries, newspapers, educational executives and all who have relations with those engaged in scientific research.
