

1000-20

**The Aminco Supersensitive
Mechanical Relay**

Operates on 6.9 ma. at 6 volts d.c.

Breaks 1100 watts, 10 amperes at
110 volts or 5 amperes at 220, a.c.

Coil Resistance 875 ohms.

Price \$15.00

We Believe in Research

Because it enables us to put out
better products for less money

The Research in Metallurgy done during the past year, combined with careful and expert design on the part of our engineers, has made possible the Aminco Supersensitive Mechanical Relay—an instrument which occupies less space, is more strongly built, and costs less money than any supersensitive relay built before.

In these days of increasing costs, it is an achievement to announce a better product for less cost than before. That is why we believe in Research.

AMERICAN INSTRUMENT CO., INC.

774-776 Girard St., N. W.

Washington, D. C.

PRECISION BINOCULARS

Made with the accuracy of fine scientific instruments. Ample range of magnifications, bright clear field; compactness; freedom from color aberration.

For Information write

BAUSCH & LOMB OPTICAL CO.

632 St. Paul St., Rochester, N. Y.

STYLOGRAPH

is a wax sensitized paper for graphic recordings. It marks with any sharp point and does not rub off like smoked paper.
