Discussion:

Reforms in Chemical Publication (Documentation): DR. ATHERTON SEIDELL. *The Controversy Concerning the Physiological Effect of Trihydrol in Liquid Water:* PROFESSOR ALAN W. C. MENZIES. *Lines of Neutral Sulfur in Procyon:* F. E. ROACH. *Additional Triassic Dinosaur Tracks from Pennsylvania:* DR. BRADFORD WILLARD. *A Source of Botanical Misinformation:* DR. EDGAR T. WHERRY 70

Scientific Apparatus and Laboratory Methods:

The Use of an Absorbent Pulpit in the Cultivation of Aerobic Organisms: PROFESSOR JOHN W. WILLIAMS. *An Apparatus for the Measurement of Respiratory Rate:* DR. R. H. LANDON and PROFESSOR W. G. BRIERLEY. *Modification of the Mudd Electroosmosis Apparatus:* DR. HENRY KLEIN 75

Special Articles:

Penetration of Gaseous Pyridine, Piperidine and Nicotine into the Bodies of Certain Insects: DR. C. H. RICHARDSON, LOUISE H. GLOVER and LEWIE O. ELLISOR. *Motor Inhibition in Amblystoma Produced by Triturus Transplants:* PROFESSOR V. C. TWITTY and DR. H. H. JOHNSON. *Enzymes, Vitamins and the Zone of Maximum Colloidalilty:* JEROME ALEXANDER 76

THE SCIENCE PRESS

New York City: Grand Central Terminal
Lancaster, Pa. Garrison, N. Y.
Annual Subscription, \$6.00 Single Copies, 15 Cts.

SCIENCE is the official organ of the American Association for the Advancement of Science. Information regarding membership in the Association may be secured from the office of the permanent secretary, in the Smithsonian Institution Building, Washington, D. C.

THE BERKELEY MEETING OF THE AMERICAN ASSOCIATION FOR THE ADVANCEMENT OF SCIENCE

Edited by Dr. HENRY B. WARD

PERMANENT SECRETARY

THE association has held previously three meetings on the Pacific Coast; the first in San Francisco from August 2 to 7, 1915, was the sixty-seventh meeting of the association. On this occasion Stanford University, the University of California and the Panama-Pacific International Exposition were hosts, and the general meetings were held in San Francisco and on the grounds of the exposition. Many of the societies held meetings on the campus of the university in Berkeley, and the entire program of one day was given on the campus of Stanford University. At

this meeting seven sections and twenty societies took part. This was a noteworthy meeting and drew to it an unexpectedly large number of scientific societies and of leading scientists who participated in their programs.

The second meeting was held at Portland, Oregon, from June 17 to 20, 1925, and was the eighty-first meeting of the association. At this meeting 16 societies took charge of the program, and the sections held no independent meetings. All sessions were held on the campus of Reed College.

New McGraw-Hill Books

A Study of Crystal Structure and Its Applications

By WHEELER P. DAVEY, Research Professor of Physics and Chemistry, Pennsylvania State College. *International Series in Physics*. 695 pages, 6×9, illustrated. \$7.50

A thorough, practical, teachable text that aims to train the student to (1) perform in the laboratory actual experimental work on crystal structure and its applications, and (2) read

with understanding and profit the increasing literature on the subject. Emphasis is placed on the applications of crystal structure principles and technique.

Electron Tubes in Industry

By KEITH HENNEY, Associate Editor, *Electronics*. 490 pages, 6×9, illustrated. \$5.00

Presents the fundamental principles involved in the use of all the various electron tubes employed in industrial operations; *i. e.*, the amplifier, rectifier, generator, grid-glow and thyatron, cathode ray, voltage and current regulator, etc. The author describes in detail the

multifarious applications of the vacuum tube and the photocell, such as motor control, laboratory measurements, power transmission, elevator leveling, counting, sorting, grading, color matching, chemical and mechanical measurement and process control, etc.

Electrical Measurements in Theory and Application. *New third edition*

By ARTHUR WHITMORE SMITH, Professor of Physics, University of Michigan. 413 pages, 6×9, illustrated. \$3.00

This well-known text is intended for students who have completed a year of college physics and desire further knowledge regarding electricity and magnetism. As in previous editions, the principles involved are amply treated and

the student is led to reason out the relations between the various quantities rather than to memorize a formula. In the new third edition much of the text has been rewritten to bring it up to date and to make the subject clearer.

Geologic Structures. *New third edition*

By BAILEY WILLIS, Professor Emeritus of Geology, Stanford University, and ROBIN WILLIS. 544 pages, pocket size, flexible, illustrated. \$4.00

A pioneering text and field book that describes geologic structures and shows the applications of the principles of mechanics to their interpretation. In the new edition speculative discussion

of theories has been eliminated, and the arrangement changed to make the book more practical and more logical. The numerous diagrams, sections, and maps are a feature of the text.
