New York City: Grand Central Terminal

Lancaster, Pa. Garrison, N. Y.
Annual Subscription, \$6.00 Single Copies, 15 Cts.

SCIENCE is the official organ of the American Association for the Advancement of Science. Information regarding membership in the Association may be secured from the office of the permanent secretary, in the Smithsonian Institution Building, Washington, D. C.

REVIEW OF SOME OF THE MORE RECENT ADVANCES IN THE STUDY OF BLOOD DISEASES¹

By Professor CYRUS C. STURGIS, M. D.

DIRECTOR OF THE THOMAS HENRY SIMPSON MEMORIAL INSTITUTE FOR MEDICAL RESEARCH
UNIVERSITY OF MICHIGAN

PROGRESS in hematology, as in any other science, depends to a great extent upon new and accurate methods of observation. As has been emphasized by Sir Humphry Rolleston,² probably the two most important steps which led to a great increase in our knowledge of blood diseases were the introduction of the microscope, and especially the compound, achromatic form by G. D. Amici a hundred years ago, and the development of the modern methods of staining blood by Paul Ehrlich, which he began in 1877.

The entire field of medicine from a scientific standpoint has progressed more rapidly during the past 50

years than it has at any other time in the history of the world. New, valuable and accurate information which has an important bearing on the cause and cure of disease has accumulated so rapidly that those who teach the practice of medicine and are interested in problems of medical research find that it requires a great effort on their part to keep abreast with the advances which are being made, even when their interests are largely restricted to a specialized field.

The science of hematology illustrates as well as any other branch of medicine that these statements are true, for during the past decade many new and fundamental facts have been discovered which have an important bearing upon the etiology and the treatment of certain blood diseases.

As it will be necessary obviously to limit this discussion, it is essential that my remarks be confined to

¹ Address of the vice-president and chairman of the Section of the Medical Sciences, delivered before the General Session, American Association for the Advancement of Science, Pittsburgh, December 27, 1934.

² Sir Humphry Rolleston, *Proc. of the Royal Soc. of Med.*, 27: 31-48, July, 1934.

BOSTON UNIVERSITY SCHOOL OF MEDICINE

ORGANIZED IN 1873

ANNOUNCEMENT

may be obtained by application to

THE REGISTRAR

80 East Concord Street

Boston.

Massachusetts

ALBANY MEDICAL COLLEGE

of
Union University

A well-endowed, Class A Medical School with entering class limited to thirty.

Close association with Albany Hospital provides unusual opportunity for clinical instruction.

For further information apply to the

OFFICE OF DEAN

Albany Medical College, Albany, N. Y.

Albany Hospital adjoining Albany Medical College

An
American-Made
Giemsa Stain,
using American dyes
and American solvents

Continued satisfied patronage encourages us in our efforts in introducing our GIEMSA STAIN made after the original method described by Giemsa in Deutsche med. Wochenschrift, No. 31, p. 1026, 1905.

We are supplying American scientists with an efficient stain marketed at a price that is reasonable by virtue of neither excessive cost of custom duty fees nor high priced unfavorable foreign exchange:

Fifty grams for \$2.00.

Gradwohl Laboratories

3514 Lucas Avenue,

St. Louis, Missouri

ANNOUNCING

CRYSTALLINE VITAMIN B₁

THE interesting researches by R. R. Williams and co-workers on the isolation of Vitamin B₁ have brought about an increasing interest in the study of the antineuritic vitamin.

The preparation, in our laboratories, of Vitamin B₁ in practical quantities enables us to supply the antineuritic vitamin in crystalline form, making it generally available to investigators and research-workers.

The crystals are the antineuritic principle in the form of the pure hydrochloride. Their biologic potency is approximately 400 Chase and Sherman units per milligram.

Vitamin B₁ Crystals-Merck are marketed in vials containing 10 mgm. (0.01 Gm.).

Further information will be furnished upon request.
