VARIOUS RESULTS OF BEING RESEARCHFUL¹

By Dr. EDWARD R. WEIDLEIN

DIRECTOR, MELLON INSTITUTE OF INDUSTRIAL RESEARCH, PITTSBURGH, PA.

IN accepting the Chemical Industry Medal, I feel that I am doing so as the representative of Mellon Institute and its executive and research staffs. I think that this signal honor has come not to me as an individual but to the group of research specialists of whom I am the director, in recognition of their original contributions, and I wish to thank you for this expression in permanent form of your high opinion of the scientific and technical accomplishments of our organization. It will be pleasant to take this medal to the institute, to show it to all those who are entitled to share in the great honor conferred by it, and then to place it among our treasured possessions.

I will now describe as briefly and clearly as I can

¹ A discourse delivered in acceptance of the Chemical Industry Medal at the meeting of the American Section of the Society of Chemical Industry, The Chemists' Club, New York, N. Y., November 8, 1935.

some of the productive work at the institute whose results have been accorded your recognition in the bestowal of this medal.

THE INDUSTRIAL FELLOWSHIP SYSTEM

Mellon Institute has four functions, namely: it is an industrial experiment station, a training school for industrial scientists, a center for investigation in pure as well as applied chemistry, and a clearing-house on specific scientific information for the public. Its services are seen in the numerous discoveries, the successful processes and products, achieved under its auspices, and in the regiment of keen research men who have here acquired specialized knowledge and experience that they are now applying usefully in other fields.

As an industrial experiment station—in its researches in applied chemistry and allied sciences—
