with its prevention. This applies not only to preventing the transmission of defects. It is recognized that methods of cure must vary with the type of constitution of the patient, and in this connection information concerning heredity is of great importance. In education, in training, and in choice of career, the ascertainment of innate endowment not only prevents waste and failure but would contribute largely to the attainment of success.

The instructed public already recognize the importance of heredity for the future of the race, and the Brock Report in 1933-34 emphasized the need for greater knowledge in regard to the inheritance of mental and physical defects. But there is as yet no center to which the public can turn for full information.

The Imperial Bureaux of Plant Genetics (in Cambridge and Aberystwyth) and of Animal Genetics (in Edinburgh) have achieved much by setting up simple machinery for collecting information based on the results of research and making these available for the practical breeder. The Bureau of Human Heredity which has recently been set up at 115, Gower Street, W.C.1, follows these models, and small contributions have already been made for its upkeep.

In these days of international mistrust and animosity, it is refreshing to find a field in which representatives of nearly every civilized nation are engaged in cooperative work. The scheme for an international clearing house of facts concerning human heredity has been evolved by a small international committee, which has delegated to its British members the task of setting up a bureau in London for the collection and distribution of all authentic information on human genetics. The British Council is asking for  $\pounds 10,000$  to carry on this work for five years.

It is strange to think that students of fruit-flies, or mice, have at their command the latest information, while those similarly concerned with man can look nowhere for a complete survey of the knowledge they require.

The urgency of this need leads us to commend the Bureau of Human Heredity to public-spirited donors. They will find no institution the endowment of which will give a more liberal return for all time.

## THE SUMMER SYMPOSIUM ON THEO-RETICAL PHYSICS AT THE UNI-VERSITY OF MICHIGAN

PROFESSOR W. HEISENBERG, of Leipzig, who had planned to lecture on nuclear physics throughout the symposium on theoretical physics at the University of Michigan, has found it impossible to be at Ann Arbor this summer.

As finally arranged the program of the conference, which will last from June 29 to August 21, is as follows:

- Professor E. O. Lawrence, University of California, "The Design and Technique of Cyclotrons, Artificial Radioactivity, the Biological Action of Neutrons and Other Similar Topics." For one month beginning June 29.
- Professor P. Ewald, Technische Hochschule, Stuttgart, Germany, "The Theory of the Solid State." Throughout the session.

- Professor H. Bethe, Cornell University, "The Physics of High Speed Particles." For one month beginning June 29.
- Professor E. U. Condon, Princeton University, "The Quantum Mechanical Treatment of Selected Problems from the Field of Spectra." For six weeks beginning July 6.
- Professor G. Breit, University of Wisconsin, "Special Topics in Nuclear Theory." For two weeks after July 20.
- Professor I. Rabi, Columbia University, "Nuclear Moments." For two weeks after July 12.
- Professor D. M. Dennison, University of Michigan, "Theory of Band Spectra." Throughout the session.
- Professor Otto Laporte, University of Michigan, "Quantum Mechanics and Atomic Structure." Throughout the session. "Spinor Analysis." Two or three lectures.

## NATIONAL RESEARCH FELLOWSHIPS IN PHYSICS, CHEMISTRY AND MATHEMATICS

THE Fellowship Board in Physics, Chemistry and Mathematics of the National Research Council announces the following appointments to Fellowships for 1936-37. After the name, the institution is given from which the doctorate was received (followed in the case of reappointments by the name of the institution at which the Fellow will work) and the subject of his research.

### REAPPOINTMENTS FOR A SECOND YEAR

In Physics:

Albertson, Walter Edward, Massachusetts Institute of Technology '35, Mt. Wilson Observatory, 'Spectroscopic Analysis.''

Nordsieck, Arnold Theodore, California '35, Stanford University, ''Relativistic Quantum Theory.''

Van Voorhis, Stanley Nichols, Princeton '35, University of California, ''Nuclear Physics.''

White, Milton Grandison, California '35, Princeton University, 'Construction of a Cyclotron for Nuclear Physics Research.''

### In Chemistry:

Bonner, Lyman Gaylord, California Institute of Technology '35, Princeton University, 'Spectroscopic Determination of Molecular Structure.''

King, Gilbert William, Massachusetts Institute of Technology '35, Harvard University, 'Vibrational Levels of Polyatomic Molecules.''

#### In Mathematics:

Levinson, Norman, Massachusetts Institute of Technology '35, Princeton University and Institute for Advanced Study, 'Closure and Entire Functions. Tauberian Theorems.''

NEW APPOINTMENTS

# In Physics :

Konopinski, Emil John, Michigan '36, ''Nuclear Theory.''
