NEW (23rd) EDITION

JUST READY

GRAY'S ANATOMY

Anatomy of the Human Body

By HENRY GRAY, F.R.S.

Thoroughly Revised and Re-edited

By WARREN H. LEWIS, B.S., M.D.

Professor of Physiological Anatomy, Johns Hopkins University; etc.

Imperial octavo, 1381 pages, illustrated with 1216 large and elaborate engravings, mostly in colors.

Cloth, \$10.00, net.

The new edition of this famous work will maintain the eminence of its predecessors. The secret of its success lies in its effectiveness as a text for medical students, and its practical value to the physician or surgeon in his daily practice. This edition reflects every advance in the science and every addition to anatomical knowledge, including much new material on the physiological anatomy of the various organs and extensive revisions of the sections on embryology and the ductless glands. Of particular importance is the thorough revision of the anatomy of the central nervous system, in which the editor has had the cooperation of Dr. David McK. Rioch of the Harvard Medical School.
