

## Efficiency at Low Cost

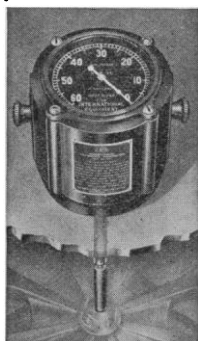

Ideal for routine testing, for replacement or as an auxiliary instrument, the improved Model "C1" Centrifuge is of intermediate size, suitable for general laboratory work. High speeds may be obtained by using a conical head.

### INTERNATIONAL Improved Model "C1" Centrifuge

The speed control is *attached to the centrifuge* and a portable stand may be added to make a mobile unit ready to plug into any wall receptacle. The base forms the frame of the motor which operates on either AC or DC and maintains allowable speeds varying between 1,800 and 3,300 r. p. m., depending upon the type of equipment used.

### NEW Indicating Tachometer

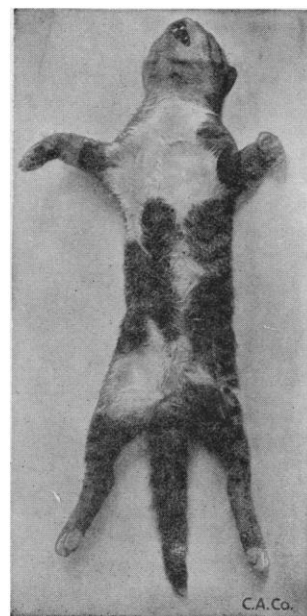

The International Tachometer shows at a glance the speed at which your centrifuge is running for any setting of the rheostat and with it uniform and duplicate results can be secured. The speed range is from 0 to 6,000 in steps of 100 r. p. m. It is shown above mounted on a Model "C1," the easy handling of which is in no wise impeded. For \$18.00 this desirable instrument can be furnished with a new Model "C1" Centrifuge or attached to any now in use.

# ★ COMPARATIVE

# ANATOMY

**C**HICAGO APPARATUS COMPANY'S preserved specimens for Comparative Anatomy are of the highest grade. All specimens are fixed immediately upon killing, carefully selected as to uniformity of size and perfection. A year-round procurement plant assures us of large stocks of dog-fish, perch, frogs, necturus, cryptobranchus, alligators, turtles, cats, and foetal pigs, as well as many other less commonly used forms. Many are furnished with circulatory system single, double, or triple injected. Frogs, cats, and reptiles are injected with gelatin mass which assures a semi-solid color medium that does not run out or diffuse. In ordering your stock of vertebrate or invertebrate material specify Chicago Apparatus Company specimens, guaranteed to meet the most exacting requirements. Materials preserved in liquid are packed in lasting non-corrosive, clamp top metal containers.
