

# INSURANCE for your STOPWATCH to save the cost of repair bills and replacements . .

**STOP-WATCH-MAN**—the handy new stopwatch support, offers inexpensive insurance to every stopwatch user. This extra hand for the busy lab worker holds the watch firmly, always in position for easy reading and instant use—removes the watch from wet, grimy or oily hands that might allow a costly slip. Most important, it promotes accuracy of observations because it frees both hands for apparatus adjustments, note taking, stirring operations, and prevents accidental timing control by taking the watch out of your hands. Stop-Watch-Man adjusts for watches of different sizes, has an adjustable stop to suit different stem movements, does away with ruinous "hammering" on the crown. Watch is quickly inserted or removed, and pressure on the crown to start, stop or return to zero is applied by simply "pressing the button."

**ONLY \$2.95 EACH**

**PRECISION SCIENTIFIC CO.**  
1730-54 NORTH SPRINGFIELD AVENUE, CHICAGO, ILLINOIS, U. S. A.

## ELECTRONIC NULL INDICATOR

FOR detecting d-c. potentials as small as 1 millivolt in circuits having resistances as high as  $10^9$  ohms, without drawing more than  $10^{-12}$  amperes from the circuit. Useful for electrometric titrations, pH measurements with any type of electrode, and similar applications in conjunction with a potentiometer.

★ **Completely Battery Operated**...no expensive voltage regulators or frequent adjustments are necessary.

★ **No Tapping Keys**...only two adjustments to prepare the instrument for use...not injured by unbalance as large as 100 volts...unaffected by vibration.

★ **Simple**...only two moving parts are the switch and two zero adjustment potentiometers. Only two connections to circuit and two to a storage battery. Can be operated in any position.
