

YOU MAKE LOW POWER PHOTOMICROGRAPHS ...

For low power photomicrography, B&L Micro Tessar Lenses are to be preferred over regular microscope objectives and eyepieces because of their greater covering power and flatness of field. They may be used for enlarging up to 50 or more diameters, depending on the bellows draw of the camera.

Bausch & Lomb Micro Tessars are available in 72 mm., 48 mm., 32 mm. and 16 mm. focal lengths. Complete details on these lenses and equipment for highpower work are included in Bulletin No. E-21 which will be sent on request. Write to Bausch & Lomb Optical Co., 642 St. Paul Street, Rochester, N. Y.
