

Designed to give all types of illumination generally used in microscopy, the Spencer Universal Microscope Lamp fills a long-felt need for a small, stable, lightweight illuminator.

The triple lens condensing system is in a spiral focusing mount and provides support for filter holder and iris diaphragm. Cobalt blue, heat absorbing, neutral density or

color filters for photomicrographic work may be inserted.

It is a brilliant source which may be focused from a sharp image of the filament to an evenly illuminated spot of light. The well-ventilated lamphouse is provided with fins to dissipate heat, making it cool enough to handle and adjust at all times. Write Dept. V4 for folder describing the Universal Microscope Lamp and its many uses.
