

For
"Yellow Precipitate"
Use
WHATMAN No. 7.

For the filtration of the elusive Ammonium Phospho-Molybdate, the "Yellow Precipitate" of Steel, Fertilizer, Ore and other laboratories, WHATMAN Filter Paper No. 7 is now widely used and enthusiastically endorsed.

The surface of No. 7 is sufficiently rough to reduce crawling to a minimum, the porosity is correct for rapid filtration yet complete retentiveness, while No. 7, although strong, breaks up nicely for titrations. The price is low enough to allow the use of No. 7 in even the most closely budgeted laboratories.

If you are not using No. 7, try a box now, your dealer has stock or samples will be cheerfully supplied on request.

Ample supplies of WHATMAN Filter Paper of all grades and sizes are available for immediate shipment from U. S. stocks.

FILTER PAPERS

Two New Editions

LAURIE AND POESCH
Commercial Flower Forcing
 3rd Edition

This book presents modern floriculture in a way that is useful and intelligible to both the student and the commercial florist. In this new edition, considerable material has been added to the subjects of gravel culture, necessary nutrient levels of greenhouse crops, soil sterilization, temperature control, the importance of humidity and improved methods of pest control.

By Alex Laurie, M.A., and
 G. H. Poesch, M.S.,
 Ohio State University
 49 Illus., 565 Pages, \$4.50
 (July, 1941)

COLLINGS
Commercial Fertilizers
 Their Sources and Use

3rd Edition

This book is an authoritative source of information on all problems concerning commercial fertilizers and their use in gaining larger yields of field and horticultural crops. New material is included on essential nutrient elements taken from the soil other than nitrogen, potassium and phosphorus, manufacture and use of ammonia solutions, proper use of individual fertilizer elements, detection of nutritional deficiencies. New colored photographs are added.
