

Index X, 1950; Index XI, 1951; and Index XII, when issued, 1952. Owing to nonconsecutive dates of publication of the recent volumes, it should be noted that this volume fills the gap between Index VIII and Index X and that the series, which was placed on an annual basis with Index X, 1950, is now complete through 1951.

In view of the fact that this Index covers in minute detail a field not fully or adequately covered elsewhere, it would be a matter of difficulty to attempt to evaluate its great and outstanding usefulness to the research workers within the scope of its subject matter. Particularly, would such be true with regard to those who must keep up with the most recent periodical literature dealing with down-to-the-minute work on such subjects as the newer insecticides, latest approved methods for their application, or, perhaps, latest results obtained from tests of new compounds. Indeed, so rapid have been developments along some of these lines that it becomes of deep interest merely to note something of the extent to which investigation has been broadened from volume to volume in the use of new words, representing names of new compounds, new subject headings, new types of equipment, and the like. These additions to the vocabulary represent definite milestones in advancement of our knowledge and, when traced from volume to volume, are eloquent in dramatizing progress.

An average person probably would consider a reference work of this kind as exceedingly uninteresting reading. However, when approached with imagination and insight, these volumes tell a vivid, dramatic story. Dull looking as they may appear, they represent detailed documentation, item by item, of year by year advancement of an army of skilled workers in the control of insect enemies of sufficient importance that they vitally effect the geographic distribution, the food supply, the health, and the general welfare of millions of people over the world.

*The Psychiatric Interview.* Harry Stack Sullivan. Helen Swick Perry and Mary Ladd Gawel, Eds. Norton, New York, 1954. xxiii + 246 pp. \$4.50.

The death in 1949 of Harry Stack Sullivan prematurely ended the career of one of psychoanalysis' most brilliant and controversial figures. Since he left only one book, it is fortunate that his coworkers have put forth the effort to edit several series of his lectures and make them available in book form. This volume includes lectures given in 1944 and 1945 in which Sullivan applied his particular interest in the problems of communication to a specific consideration of the interview. Its informal style reveals his personality, his sometimes sardonic humor, and his characteristic method of teaching.

The book is a readable guide to Sullivan's concept of the theoretical nature and practical technique of the interview. He first makes it clear that an inter-

viewer must contribute thought and direction, as well as a sympathetic ear, to carry out his responsibilities. He then outlines the objectives of the interview and emphasizes the specific maneuvers he used to accomplish these objectives.

His lucid and practical discussion should be helpful to the psychiatrist, particularly the psychiatrist in training. However, whether the material is equally helpful to ministers, educators, and workers in industry, as recommended by the author, is open to some question, unless they have an unusually extensive psychiatric background.

Sullivan's book demonstrates that psychoanalysis today is by no means limited to Freudian theory. He was a leader in the challenge to those who tended to look on Freud as a final authority, and he contributed materially to the scientific advance of psychoanalysis and to the prevention of its stagnation. The taste of Sullivan's dynamic thinking included in *The Psychiatric Interview* should stimulate the reader to further exploration of his interpersonal theory of psychiatry.

*How to Understand Propaganda.* Alfred McClung Lee. Rinehart, New York, 1952 (reissue, 1954). xii + 281 pp. \$3.

It is encouraging to hear again, even if indirectly, from the Institute for Propaganda Analysis, which voluntarily ceased its work at the start of World War II. Alfred McClung Lee served for a period as executive director of that important organization and has had a long, unbroken interest in propaganda. This book is a reorganization and popular interpretation of Lee's writings in learned journals during a period of two decades. It should be viewed, therefore, as a popularization rather than as a work pushing forward the frontiers of thought and research in this field.

The early pioneer work of the Institute for Propaganda Analysis was concerned principally with large-scale national propagandas. Indeed it was this very emphasis that led to the dilemma of loyalty created by our own entrance into war—a dilemma which the Institute patriotically resolved by ceasing its work. *How to Understand Propaganda* is directed more at domestic forces, commercial advertising, vicious brands of super-patriotism, and other compulsions that place us under what the author calls "the growing pall of orthodoxy." He seeks to reinforce the objectives of liberal education by helping man free himself from the glue of mass opinion and conformity that has been slowly poured over him. He reflects the same concern for individuality that occupied much of the energy of Thoreau and Mill and, in our own time, of Ortega y Gasset in his *Revolt of the Masses* and David Riesman in *The Lonely Crowd*.

Lee's analysis, however, lacks the clarity and incisiveness of these other works. It is true that his warnings about the development of mass man are put
