SCIENCE, founded in 1880, is published each Friday by the American Association for the Advancement of Science at Business Press, Lancaster, Pa. Entered at the Lancaster, Pa., Post Office as second class matter under the Act of 3 March 1879.

SCIENCE is indexed in the *Reader's Guide to Periodical Literature*.

All correspondence should be addressed to SCIENCE, 1515 Massachusetts Ave., NW, Washington 5, D.C. Manuscripts should be typed with double spacing and submitted in duplicate. The AAAS assumes no responsibility for the safety of manuscripts or for the opinions expressed by contributors.

Change of address: The notification should reach us 4 weeks in advance. If possible, please furnish an address stencil label from a recent issue. Be sure to give both old and new addresses, including zone numbers, if any.

Annual subscriptions: \$7.50; foreign postage, \$1; Canadian postage, 50¢. Single copies, 25¢. Special rates to members of the AAAS. Cable address: Advancesci, Washington.

The AAAS also publishes THE SCIENTIFIC MONTHLY.

## Suggestions for Contributors

Every article, communication, or book review is accepted with the understanding that it has not been published or accepted for publication elsewhere. (Occasionally an important article is reprinted from, or simultaneously printed with, another periodical, usually one not readily available to readers of *Science*, but this is always done by special arrangement with the author.)

An article should receive a thorough review before submission, if possible by someone other than the author. If a manuscript is returned to an author for a thorough revision, the revision date will be regarded as the "Received" date for the article.

Submit the typescript in *duplicate*. For the first copy, use a good grade of bond paper, 8.5 by 11 in. *All copy, including quotations, footnotes, tables, literature references, and legends for figures, should be double-spaced.* Leave margins of at least 1.5 in. at the sides and at the top and bottom. Pages that are heavily corrected should be retyped. Do not insert corrections and additions lengthwise in the margin; the printer works with the typescript mounted in a frame that exposes only a few lines at a time.

*Acceptable lengths for articles.* See *Science* 122, 7 (1 July 1955).

*Changes in copy.* All corrections in manuscript and proof should be transmitted to the Editorial Office in Washington, *not* to the printer.

*Illustrations.* A brief legend should be provided for each diagram, graph, and photograph. It should *not* be incorporated in the figure. All legends are set in type by the printer and, hence, should be typed on a separate sheet.

On the margin or back of each illustration, write in pencil the number of the figure, name of the author, and abbreviated title of the article. All illustrations should be packed carefully with cardboard to avoid damage in mailing. Cracks and marks made by paper clips or pressure of writing ruin photographs for reproduction.

Line drawings should be made with India ink on heavy white drawing paper or blue tracing cloth. Ruled coordinate paper may be used for graphs, provided that it is printed in light blue; the important coordinate lines and scale markers that are intended to appear in the reproduction must be ruled in India ink. A good size for a drawing is twice that desired for the printed figure, with all lettering and line thicknesses similarly enlarged. One-column-width illustrations are reproduced 2 $\frac{1}{8}$  in. wide; two-column width illustrations, 4-9/16 in. wide; three-column width illustrations, 6-15/16 in. wide.

Diagrams containing little detail should be planned so that the printed figure can be made one column wide. For presenting apparatus, a line drawing is usually better than a photograph. For information on the preparation of graphs, see *Science* 120, 5A (17 Sept. 1954) and next week's issue.

Photographs should have a glossy finish. For satisfactory reproduction, a print must be unblurred and must show sharp contrast between light and dark areas.

*Tables.* Each table should be typed on a separate sheet and should be provided with a title. Tables should be numbered consecutively with Arabic numerals.

*References and notes.* The only footnotes are to be those appended to tables and the author's affiliation in lead articles. All other explanatory notes, including acknowledgments and authorization for publication, and literature references are to be numbered consecutively and placed at the end of the article, under the heading "References and Notes."

# *Proven Performer In The Laboratory*

# **CRYO-DESICCATOR**

## **FOR USE IN:**

- Histology
- Cytology
- Histopathology
- Cytochemistry
- Histochemistry

**T**he Tissue Cryo-Desiccator provides a simple, rapid reliable and inexpensive method of preparing frozen dried tissues.

Tissues are supported in a basket which has movable partitions to accommodate specimens of different sizes.

Temperature is measured under the same conditions as the tissue. Liquid nitrogen is used to cool the tissue. Automatic sealing is achieved by atmospheric pressure.

This new Cryo-Desiccator is inexpensive to operate and easy to use. Glass parts are held to a minimum and the construction is rugged.

For further information write:

**Cat. No. 9-99 . . . . . Price \$1450.00**

## **FURNISHED WITH THE FOLLOWING ACCESSORIES:**

- 1 extra glass tube for tissue heater
- 1 electric cord
- 1 flexible metal tube for attaching to pump
- 1 dial thermometer, Weston 0-180 Deg. F.
