KINSHIPS OF ANIMALS AND MAN

A Textbook of Animal Biology

By ANN HAVEN MORGAN, Professor of Zoology,
Mount Holyoke College

A new and stimulating text written in simple, direct language, with liberal use of examples and illustrations the student will understand and appreciate. It explains why animals are what they are, how they behave, and what their phylogenetic relationships to other organisms are.

Emphasis is placed on ecology throughout the text. Animals are studied as social beings associated with their environments, and as individuals each of which contains a complex internal environment affected by the external one. The important role of cooperation among living organisms, with its great implications, is stressed and nature's use of common abundant substances in vital functions is repeatedly illustrated. Together, with well selected examples, it correlates chemistry and physics with biology.
