A dedicatory volume summarizing the great
developments of 20th century physics

NIELS BOHR and the DEVELOPMENT OF PHYSICS

Edited by W. PAULI, University of Zurich.

195 pages, \$4.50

This dedicatory volume has been prepared to honor Dr. Bohr on the occasion of his 70th birthday. This collection of essays and articles presents an excellent account of the impact of Niels Bohr's life work on the development of physics.

The book is not a conventional "Festschrift" but tries to evoke some aspect of the general problems of physics, especially of atomic and nuclear physics with which Niels Bohr has been most deeply concerned.

Each contribution consists of an introduction and description of the problems and describes the further developments, the present state of knowledge, and indicates further aspects and developments. In some essays important new and hitherto unpublished results have been included.

Although the treatment is mainly for the theoretical physicist, each essay will also be read with profit by the experimental physicist, the mathematician, the philosopher, and the educated scientific-minded layman.

THE ATOMIC NUCLEUS

By ROBLEY D. EVANS

International Series in Pure and Applied Physics

972 pages, \$14.50

A broad coverage of the field of nuclear physics, both "intra-nuclear" and "extra-nuclear".

ATOMIC PHYSICS

By GAYLORD P. HARNWELL and

WILLIAM E. STEPHENS

International Series in Pure and Applied Physics

412 pages, \$8.00

Presents the essential physical ideas upon which the current atomic theory of matter rests.

METHODS OF THEORETICAL PHYSICS

By PHILIP M. MORSE and

HERMAN FESHBACH

International Series in Pure and Applied Physics

Part I: 1,047 pages. Part II: 989 pages.

\$15.00 each part.

Concerned with those techniques used in the calculation of fields: gravitational, electromagnetic, acoustical, quantum-mechanical, thermal and elastic, and others.
