

COMFORT ALL THE WAY

**... makes
critical studies
easier**

Freedom from fatigue keeps you alert and efficient throughout prolonged observations when you use a Bausch & Lomb Research Microscope. You sit in a natural, comfortable position to look through the inclined eyepieces. Your hand rests on the table for relaxed operation of low-position fine focus, stage and substage controls. *Seeing* is easier, too; apochromatic objectives, 1.40 N.A. achromatic substage condenser, and compensating eyepieces provide clear, detailed images of otherwise hard-to-see materials and structures. Find out how a B&L Research Microscope makes it easier for you to do your best work.

BAUSCH & LOMB

RESEARCH MICROSCOPES

tions for testing completeness of registration and of statistical reporting as well as for assessment of the quality of the data. The suggestions are not exhaustive, but they are indicative of the directions evaluation may take.

The *Handbook* is, in effect, a commentary on the 1953 *Principles for a Vital Statistics System* that demonstrates from actual practices the rationale behind the latter document. Its recognition that more than one method may serve the principles laid down enhances its effectiveness.

The annexes include a chronology of important events in registration and vital statistics history, a reproduction of the earlier *Principles of a Vital Statistics System*, definitions of "stillbirth" in 84 countries, and an extremely valuable list of references classified by subject matter. The index is sufficiently detailed to afford ready reference to specific subjects.

Altogether, the *Handbook* provides a liberal education in its field. It should be read by every consumer of vital statistics. For registrars and producers of vital statistics, it is a must, and for areas that are building a vital statistics system, it represents an indispensable *vade mecum*.

RECENT HARPER TEXTS

Bacteriology

MICROBIOLOGY GENERAL AND APPLIED Second Edition

By Sarles, Frazier, Wilson, and Knight
University of Wisconsin

Just published, this is a thorough revision, entirely reset, of a leading text in bacteriology, with all material brought up to date, many chapters extensively revised, and the five chapters on infectious diseases of animals and plants completely rewritten. Designed for students in general science, agriculture, home economics, pharmacy, chemistry, and engineering.

Biochemistry

THE CHEMISTRY OF LIVING CELLS

By Helen R. Downes
Barnard College, Columbia University

The cordial reception of this recent text indicates that it meets a definite need in biochemistry, for an up-to-date treatment of the general chemical processes common to all living cells. It reflects the growing tendency to emphasize the fact that plant and animal metabolism are fundamentally alike, and gives a sound and exceptionally well-written overall view of the most significant facts of biochemistry. Designed for use with premeds, biology and chemistry majors, and agricultural students.

Mathematics

DIFFERENTIAL EQUATIONS WITH APPLICATIONS

By Betz, Burcham, and Ewing

This new text for the standard junior-level course in differential equations has been unusually well received. Applications to the physical, biological, and engineering sciences are integrated with the text, not mere illustrations. The introduction to modern operational methods and to nonlinear problems is an important new feature in an introductory text. The treatment of classical operational methods is unusually thorough. Answers provided for the many problems.

Psychology

THE CLINICAL INTERACTION With Special Reference to the Rorschach

By Seymour B. Sarason

A distinguished work on projective techniques, presenting the thesis that a subject's reaction to the Rorschach can only be understood in terms of variables which are operative in all interpersonal relations. The author describes and illustrates the more important of such variables, critically examines traditional assumptions and scoring practice of the Rorschach, and discusses the nature of the interpretative process, with a detailed analysis of six illustrative cases.

INTRODUCTION TO MICROFOSSILS

By Daniel J. Jones, *University of Utah*

IN HARPER'S GEOSCIENCE SERIES, UNDER THE EDITORSHIP OF CAREY CRONEIS

The only book available on micropaleontology—an important work for petroleum, economic, and exploration geologists and an outstanding text for senior and graduate courses in micropaleontology. The author describes (1) methods of collecting, separating, and mounting microfossils, and (2) micropaleontological objects representing all major groups of the plant and animal kingdom. Special attention is devoted to plant

microfossils, especially the spores and pollens, which are becoming increasingly important in exploration geology. There are full discussions of the environmental significance of various microfossils and the applications of micropaleontological data to practical problems in economic geology. The text is thoroughly documented and the lavish illustrations are outstanding.

4 CENTRIFUGES
for '56 by C.S. & E.

Backed by fifty years of experience the Chicago Surgical and Electrical Company presents the "Forward Look," in the field of centrifuges.—Not only does this embody improvement of design, but in every phase of construction and craftsmanship . . . To one end; perfection of equipment for medical, chemical, and research laboratories.

Two new 6-tube 15 ml. safety angle centrifuges, Models 40 and 50 are fully enclosed and have safety cap for loading. There are no exposed revolving parts and danger from flying glass is eliminated. Distinctive C. S. & E. styling with Sand-Tan Finish. Streamlined aluminum housing. Speed of Model 40 is constant 1700 RPM, while Model 50 has Ohmite rheostat giving speed regulation from 0 to 5000 RPM, with built-in timer. Motor of Model 50 is ball-bearing, lubricated for life. Easy loading and unloading.

Embodying many safety features, the Model 10 (Size 1) and Model 20 (Size 2) C. S. & E. Centrifuges are designed for use in medical and industrial laboratories. Cabinets are of most modern furniture type design finished in Sand-Tan with black Formica top; electric brake eliminates brake shoes; built-in Powerstat gives stepless speed control; dial type speed indicator indicates speed up to 6,000 RPM.; automatic electric timer; all controls are interlocked for operator safety. Motor is lubricated for life. Model 10 will accommodate all types of heads suitable for Size 1 Centrifuges; Model 20 takes all Size 2 heads and accessories. Both units offer convenient storage space for accessories. Model 10 comes with 1/4 HP motor; Model 20 has 3/4 HP motor. Both models may be supplied with refrigeration for operation below room temperature.

27 APRIL 1956

753

□ **TEMPERATURE: Its Measurement and Control in Science and Industry, Vol. 2** edited by Hugh C. Wolfe for the American Institute of Physics. Records the proceedings of the Third International Symposium on Temperature held October 1954. Presents invaluable new material on techniques determining temperatures from .001°K to the core of an atomic explosion. Includes new revisions in the international temperature scale, techniques of resistance thermometry, use of superconductors and semiconductors, temperatures in non-equilibrium situations, optical measurement methods, measurement in engineering, and much, much more. 1955, \$12.00

□ **FIFTH SYMPOSIUM (INTERNATIONAL) ON COMBUSTION** by the Standing Committee on Combustion Symposia, The Combustion Institute. The most complete, authoritative and up-to-date body of knowledge ever assembled on the combustion problems involved in the efficient operation of all types of engines. 101 papers deal with such important subjects as kinetics of combustion reactions, the combustion of fuel droplets, combustion of solids, propellant burning, special techniques and instrumentation, diffusion flames and carbon formation, flame spectra and dissociation energies, and special processes in engines. 1955, \$15.00

□ **ECONOMIC GEOGRAPHY OF INDUSTRIAL MATERIALS** edited by Albert S. Carlson. 500 pages of vital economic facts by 27 experts! Such factors as location, climate, soil, topography, water resources, minerals, fuels, labor, capital, management, transportation and markets are discussed and evaluated to show profitable trends and conditions for many key industries. 1956, \$12.50

□ **INFORMATION PROCESSING EQUIPMENT** edited by M. P. Doss. Sponsored by the Division of Chemical Literature of the American Chemical Society, this valuable book fully describes all the modern equipment used to prepare, reproduce and utilize written information. 1955, \$8.75

□ **THE TECHNICAL REPORT: Its Preparation and Use in Government and Industry** edited by B. H. Weil. From the conception of its need to final destination and use, every phase of the technical report is fully covered. It will prove of great value to any engineer who must prepare or depend on reports for precise communication. 1954, \$12.00

□ **COMPUTERS: Their Operation and Applications** by Berkeley and Wainwright. Describes and illustrates the techniques and equipment of automatic computing. Explains in detail machines which have achieved maximum effectiveness, basic concepts which will underlie future developments, and areas where more information is needed. Covers many applications in business and industry. 1956, \$8.00

□ **INSTRUMENTS FOR MEASUREMENT AND CONTROL** by Werner G. Holzbock. Describes and illustrates all recent devices for measuring and controlling temperature, moisture, pressure, flow, uniformity, etc. Discusses the design, construction and operation and comparison factors to consider in choosing the proper instrument for a particular job. 1955, \$10.00

□ **PROBLEMS AND CONTROL OF AIR POLLUTION** by the Committee on Air-Pollution Controls, ASME. Based on the papers presented at the First International Congress on Air Pollution by the world's foremost authorities in the field. 1955, \$7.50

□ **NOMOGRAPHY AND EMPIRICAL EQUATIONS** by Dale S. Davis. Explains the many engineering applications and shows how to employ industrially important alignment and line co-ordinate charts to speed up daily on-the-job calculations. 1955, \$6.75

□ **HANDBOOK OF FOOD & AGRICULTURE** edited by F. C. Blanck. Over 1,000 pages of expert information on the newest applications of science to the food and agricultural fields! Covers: soils and plant growth; fertilizers; insecticides; growth regulators; essential nutrients; storage of raw products; food processing; preservation; packaging; quality control; waste disposal; and many other important topics. 1955, \$12.50

□ **CHEMISTRY OF THE SOIL** Edited by F. E. Bear. Describes chemical aspects of soils in relation to their development, present constitution, and uses. Covers composition, colloids, organic matter relationships, oxidation-reduction phenomena, nutrient fixation, trace element chemistry, and many other important topics. ACS Monograph, 1955, \$8.75

□ **RADIOISOTOPES IN INDUSTRY** Edited by J. R. Bradford. Covers all the important industrial uses of radioactive isotopes. Includes not only the uses of radioisotopes, but such topics as laboratory construction, shielding, personnel protection, handling techniques, and waste disposal. 1953, \$8.00

**Viscosity directly
in centipoises . . .**

HOEPLER VISCOSIMETER PRECISION MODEL

The Hoepler Viscosimeter provides a fast, accurate method of determining the viscosity of gases, liquids, oils, plastics, syrups, viscous tars and dark liquids. From 0°C. to 100°C. Direct readings in centipoises (or centistokes). From 0.01 to 1,000,000 centipoises. Accuracy 0.1% to 0.5%. Small sample (30cc) required. Results consistent and reproducible.

Write for Bulletin HV-303.

FALLING BALL PRINCIPLE

The falling time of the ball multiplied by other given factors shows absolute viscosity in centipoises.

UBBELOHDE Viscosimeter

on the principle of the suspended level

A capillary-type viscosimeter for determining the kinematic viscosity of any true viscous liquid, such as petroleum products or lubricants. See American Society for Testing Materials, A.S.T.M. designation D 445-46T.

Measures viscosity with an error not greater than $\pm 0.1\%$, when used at efflux times of 80-1000 seconds. The smallest listed capillary is used for light fuel oil or kerosene, the others for lubricating oils. The temperature of the bath should be controlled within $\pm 0.02^\circ\text{F}$.

In all capillary sizes as called for by the A.S.T.M.—calibrated or uncalibrated.

Uncalibrated capillary, \$18. Calibrated, \$37.50
Metal frame to fit capillary, \$6.

NEW AND RECENT

RONALD BOOKS . . .

Energy and Structure in Psychoanalysis

Kenneth Mark Colby, M.D., *San Francisco Institute of Psychoanalysis*. This new, original study of the basic theory of psychoanalysis examines two postulates—psychic energy and psychic structure—showing their usefulness and drawbacks in theoretical problems. Derives a new construct of psychic energy and a cyclic-circular model of psychic structure which organizes innate and experiential factors into a structural, functional whole. "A penetrating revaluation of the fundamental concepts of energy, force, and 'drive' . . ." —**Ernest Jones, M.D.** 14 ills.; 154 pp. **\$4.50**

A Short History of Medicine

Edwin H. Ackerknecht, M.D., *University of Wisconsin Medical School*. Drawing on original sources, this new survey presents each major trend in the history of medicine, interprets its application for modern practice, and brings out its significance in terms of scientific, sociological, and economic developments. Gives balanced coverage to surgery, internal medicine, clinical treatment, medical practice, etc. "The best short work of its kind available in English." —**Paul Cranefield, State University of New York**. 28 ills.; 258 pp. **\$4.50**

History of American Technology

John W. Oliver, Emeritus, University of Pittsburgh. Surveys the role of science and technology in our development from colonial times to the present, underscoring the relationship between technological progress and political and economic growth. Discussing such current advances as atomic fission and automation, the book points out why these are mere indications of the dominant role both science and technology will continue to play in future American life. 676 pp. **\$6.50**

Essentials of Quantitative Analysis

A. A. Benedetti-Pichler, Queens College. Valuable laboratory manual and reference work on techniques and standards of performance applicable to both organic and inorganic analysis. Book includes specific numerical data on the degree of precision of many unit operations, and supplies equations by which limits of error can be calculated for almost any quantitative operation. Important new material is presented in the tables at the back of the book, which constitutes a separate reference section. 138 ills., tables; 666 pp. **\$15**

Pergamon Press are pleased to announce the forthcoming publication of two new journals

THE INTERNATIONAL JOURNAL OF APPLIED RADIATION AND ISOTOPES

Editorial Board P. C. Aebersold, OAK RIDGE, A. J. W. Aten, Jr., AMSTERDAM, J. C. Bugher, NEW YORK, J. Coursaget, SACLAY, V. N. Kondratiev, MOSCOW, M. Magat, PARIS, H. R. Nelson, RUTGERS MEMORIAL INSTITUTE, J. L. Putman, HARWELL, H. Seligman, HARWELL. The editors will be assisted by an advisory board consisting of eminent scientists of international reputation.

The object of this journal will be to provide a medium for the publication of isotope techniques, especially new techniques and those of wide possible application. In addition, in order to integrate these techniques and show their relation to specific fields of activity, review articles will be published, and it is intended that each number of the journal shall contain one up-to-date and world-wide review on progress in some particular aspect of isotope application. The contents of this journal will be of interest to scientists in general and in particular to those working in the fields of biology, medicine and certain aspects of agriculture.

Subscription Rates A. \$14 (£5) per volume (postage included) for institutes, libraries, offices etc. B. \$9.80 (£3.10s) per volume (postage included) for individual subscribers certifying that the journal is for their private use only.

Quarterly 4 issues per volume 1st issue ready shortly

INTERNATIONAL JOURNAL OF PHYSICS AND CHEMISTRY OF SOLIDS

Editor-in-Chief Professor Harvey Brooks (HARVARD) assisted by an advisory board consisting of eminent scientists of international reputation.

The journal will publish both theoretical and experimental papers dealing with original research in all aspects of the physical and chemical properties of solids and condensed systems. The aim of the journal is to bring together in a common forum the best contributions in the physics and chemistry of the solid state from all over the world. It is part of the purpose of the journal to encourage greater interchange between physicists and chemists interested in solids.

Subscription Rates A. \$14 (£5) per volume (postage included) for libraries, offices etc. B. \$7.35 (£2.12s.6d.) per volume (postage included) for individuals certifying that the journal is for their private use only.

Monthly 4 issues per volume 1st issue to be published later this year

Please note that B subscriptions must be placed direct with the publishers

RESEARCH EQUIPMENT CORPORATION

1135 Third Street, Oakland, California

The Reco Fraction Collector

Fully automatic fraction collection by timed-flow, or volumetric measurement. Utmost accuracy from 3 cc. to 90 ml. with standard receiver plates. Plates hold 400 13 mm, and 25 100 mm test tubes 8 inches long. Standard equipment includes heavy-duty worm-gear reduction motor with indexing mechanism, 2 receiver plates, 4 stainless steel support posts, volumetric syphon assemblies and Timer/Controller. Drop counter and accessories available.

Packard Instruments

1 Liquid Scintillation Spectrometers

2 Automatic Fraction Collectors

3 Windowless and Flo-Window Counters

1

TRI-CARB LIQUID SCINTILLATION SPECTROMETERS

For counting Tritium, Carbon-14 and other beta emitting isotopes.

Provides the most simple and convenient method for precise counting of beta samples that go into solution with liquid phosphors.

Aqueous samples of various types may also be readily counted.

Certain materials that are not soluble in liquid phosphors may be counted in suspensions.

Request
Bulletin
314

2

AUTOMATIC FRACTION COLLECTORS

For precise column chromatography.

Provides both time and drop counting. Can be furnished for time operation only at commensurately lower cost.

Drops from column fall directly into test tubes. There are no intermediate collecting vessels, glass arms, or funnels to cause mixing, contamination, evaporation, etc. This is important where accurate separations are required or where radioactive tracers are used.

Request
Bulletin
230

3

WINDOWLESS AND FLO-WINDOW COUNTERS

Both types can be used for Geiger and proportional operation.

Windowless Flow Counter, Model 200A, provides maximum sensitivity for counting solid samples which emit very soft radiations. Has essentially unlimited life. Physical arrangement of sample in chamber makes it possible to achieve full 2π geometry.

Flo-Window Counter, Model 210, features a very thin metalized window of Du Pont Mylar which offers a minimum of obstruction to low energy radiation. Isolates counting chamber from sample. Eliminates static charge, vapor effects, accidental contamination, etc.

ADVANCES IN EXPERIMENTAL CARIES RESEARCH AAAS SYMPOSIUM VOLUME June 1955

246 pp., 6" x 9", 49 illus., index, clothbound

Price \$6.75; cash order price for
AAAS members \$5.75

"... This is a real contribution to dental science. It is the most comprehensive review of animal experimentation on caries ever attempted. The format and reproduction of illustrations are excellent.

"This compilation of research findings should have wide circulation and should be a storehouse of information for all those who are investigating the problem of dental caries. It should serve to clarify the thinking and prevent useless duplication in future studies. . . ."

Russell W. Bunting, School of Dentistry, University of Michigan.

Get UNITRON'S FREE

Observer's Guide and Catalog

on Astronomical Telescopes. .

**This valuable 38-page book
is yours for the asking!**

With the artificial satellite and space travel almost a reality, astronomy has become today's fastest growing hobby. UNITRON'S new handbook contains full-page illustrated articles on astronomy, observing, telescopes and accessories. Of interest to beginner and advanced amateurs alike.

Contents include —

- Observing the sun, moon, planets and wonders of the sky
- Constellation map
- Hints for observers
- Glossary of telescope terms
- How to choose a telescope
- Amateur clubs and research programs

NEW! Multi-Purpose Scintillation Detector With Optional Accessories...

Optional accessories include (A) $\frac{3}{4}$ ", (B) $\frac{1}{2}$ ", and (C) well scintillation crystals. Large lead collimator (D) provides exceptional side shielding, accepts 20° flat field collimator (E) or special focusing collimator (F). Alpha and beta phosphors (G) are interchangeable with standard 1" crystal.

FOR USE WITH STANDARD SCALERS OR GAMMA RAY SPECTROMETERS

Nuclear-Chicago's new Model DS-5 is the first completely self-contained scintillation detector designed for basic counting or for the revolutionary techniques of gamma ray spectrometry, "pin-point" depth focusing, or source scanning. This is a unique instrument—providing unmatched performance for your present requirements and quickly convertible to the many new applications you'll face in the future. The most advanced scintillation counter on the market, the new DS-5 is inexpensive, reliable and easy to operate. Write today for detailed specifications.

Standard probe is quickly converted into a scintillation well counter by changing crystals and adding inexpensive base and shielding.

Easily accessible switch in housing permits changing from preamplifier output for scaler or ratemeter use to cathode follower output for gamma ray spectrometry work.

SPECIFICATIONS

Crystal—Normally supplied with 1" x 1" NaI(Tl) crystal. Other size crystals and phosphors optional. 1" x 1½" lucite light pipe. Crystal can be exposed directly in path of radiation.

Phototube—DuMont 6292 protected by a magnetic shield.

Shielding—Internal $\frac{1}{4}$ " x 3" lead ring. External lead nose provides 1½" or more of lead at sides. Acceptance angle at rear is less than 25°.

Amplifier—New one-tube feedback amplifier provides gain of two and cathode follower positive output for spectrometer use; gain of 10 with negative output for normal use. Band width sufficient for 1 microsecond resolution. Provides pulse height limiting for spectrometer use.

Operation (with 1" x 1" crystal)—Plateau: 250 volts; 2% slope/100 volts. Background: Crystal exposed—1250 cpm; with lead nose—160 cpm; with additional collimation—95 cpm. Detection efficiency (1 microcurie I^{131} at 10 cm): 4400 cpm.
