## AINSWORTH MICRO BALANCES

### new conducting glass for elimination of static

In micro balances the limiting factor in reproducibility often has been the effect of static electricity. Most of the charge is found on the glass of the front door. This problem has been reduced and overall accuracy increased considerably by (1) use of coated conducting glass and (2) connecting the doors and other parts of the balance, electrically, to a binding post for ground connection.

#### FASTER ACTING...

with improved design of beam and moving system.

#### MAGNI-GRAD OPTICAL SYSTEM

magnifies the pointer swing and projects it on easy-to-read screen.

#### RIDER APPARATUS

lifts the rider vertically. A moving magnifier is attached to rider rod to help in placing and reading the rider.

#### SAPPHIRE BEARINGS

All knife edges and planes are synthetic sapphire which is hard, uniform, does not absorb moisture, has very low coefficient of friction.
