Volume 124, Number 3214

Editorial	In Defense of the Nation	201
Articles	On the Mitotic Movements of Chromosomes: <i>J. G. Carlson</i>	203
	Some Limits to Popular Science	207
	Edmund T. Whittaker, Mathematician and Historian: <i>H. Dingle</i>	208
	Harry J. Deuel, Jr., Student of Nutrition: <i>J. M. Luck</i>	209
News of Science	Loyalty-Security Program; Individuality in Chimpanzee Behavior; Patent Ruling; Toxicity of Ozone; Premedical and Medical Education; AEC Foreign Agreements; High-Altitude Studies of Solar Flares; News Briefs; Scientists in the News; Recent Deaths; Education; Grants, Fellowships, and Awards; In the Laboratories; New Journals; Miscellaneous	210
Reports	Speculations on Cosmogony: <i>M. Goldhaber</i>	218
	Mechanism of Sound Production in the Sculpin: <i>S. B. Barber</i> and <i>W. H. Mowbray</i>	219
	Some Effects of Specific Organic Compounds on Marine Organisms: <i>A. Collier, S. Ray, W. B. Wilson</i>	220
	Detection of Tumor-Inducing Factors in <i>Drosophila</i> : <i>L. Burton</i> and <i>F. Friedman</i>	220
	Osmotic Gradients across Cellular Membranes: <i>E. Grim; W. A. Brodsky, W. S. Rehm, W. H. Dennis</i>	221
	Ultrafractionated Ultraviolet Irradiation of Yeast Cells: <i>J. G. Kereiakes, R. H. Hodgson, A. T. Krebs</i>	222
	Agronomic Use of an X-ray-Induced Mutant: <i>E. E. Down</i> and <i>A. L. Andersen</i>	223
	Isolation of Dengue Virus from a Human Being in Trinidad: <i>C. R. Anderson, W. G. Downs, A. E. Hill</i>	224
	Characteristic Electrophoretic Patterns of Plasma Proteins of Orders of Amphibia and Reptilia: <i>H. C. Dessauer</i> and <i>W. Fox</i>	225
	Tissue-Culture Cultivation of Cytopathogenic Agents from Patients with Clinical Hepatitis: <i>W. A. Richtsel</i> et al.	226
	Metabolism of Glycine by Bovine Spermatozoa: <i>R. J. Flipse</i>	228
	Maternal and Sexual Behavior Induced by Intracranial Chemical Stimulation: <i>A. E. Fisher</i>	228
Book Reviews	<i>Learning across Culture; The Meaning of Relativity; L'Evolution de la Lithosphere; Geometrical Optics; The Systematic Identification of Organic Compounds; Books Reviewed in The Scientific Monthly, August; New Books; Miscellaneous Publications</i>	230
Meetings and Societies	Theoretical Geophysics; Meeting Notes; Society Elections; Forthcoming Events	234
	Equipment News	240

Dr. Joseph E. Burke, B.A., McMaster University (1935), Ph.D., Cornell (1940), was a metallurgist and group leader at Los Alamos from 1943 to 1946 and later joined the University of Chicago faculty. He came to General Electric in 1949, served as manager of metallurgy at the Knolls Atomic Power Laboratory, and in 1954 became manager of ceramic studies at the Research Laboratory.

Ceramics for the jet age

General Electric's Dr. J. E. Burke seeks better ceramic materials by studying their microscopic structure

During a decade as a "practicing metallurgist," Dr. Joseph Burke contributed to the knowledge of structure and kinetics in metals. He also developed an interest in the crystalline cousins of metals: ceramics. Recognizing the potential of ceramic materials, Joe Burke turned his talents toward increasing and exchanging the mutually useful information produced by research in both ceramics and metallurgy. Now he is leading an intensive effort at the General Electric Research Laboratory to learn more about the *structure* of ceramics—and the effects of structure on mechanical, electrical and magnetic properties.

At General Electric, ceramics research already has

created unique insulators for vacuum tubes, new ferrites for electronic uses, and transducers whose applications range from hi-fi to ultrasonics. As the day of "non-brittle" ceramics comes ever nearer, Joe Burke and his associates expect their non-metals may be the answer to many high-temperature problems of the jet age.

Progress Is Our Most Important Product

GENERAL  ELECTRIC

MORE MICROSCOPE for your money

EASIEST FOCUSING EVER!

Entire focusing system "floats" on ball bearings and rollers; no drift, bind, or backlash. Ultra-fine focus, with 1 micron divisions, assures immediate critical focus at all magnifications.

LIFETIME ACCURACY!

Ball bearing nosepiece, self-compensating for wear, provides identical repeat settings. Ball bearing stage, factory-precentered, graduated in single degrees, drilled and tapped to receive mechanical stage. Choice of pre-set or rotatable polaroid polarizer, both with iris diaphragm. (Centerable nosepiece available for research.)

BRIGHT, EASY-TO-SEE IMAGES!

Entire optical system is dustproof, including flip-in polaroid analyzer and accessory slot. Strain-free achromatic objectives. Uniform light on full field. Opti-lume Illuminator (optional), interchangeable with mirror, is ventilated to assure cool stage necessary for Becke Line Tests.

● NEW! B&L ACCESSORY SLOT COMPENSATOR SPEEDS BIREFRINGENCE MEASUREMENTS

This important quality control and research aid quickly and efficiently measures phase difference; speeds determination of optical character or sign. Direct-reading magnified scale, calibrated in millimicrons; no computation or conversion needed. Readings correct to $\pm 2\%$ over a range of 0 to 2700 millimicrons. Fits all American microscopes of current design.

BAUSCH & LOMB

WRITE FOR DATA AND DEMONSTRATION

Catalog D-130, and obligation-free demonstration, yours on request. Bausch & Lomb Optical Co., 64207 St. Paul St., Rochester 2, New York.

America's only complete optical source... from glass to finished product.

Large Capacity - Highly Corrosion Resistant TRIPLE-BEAM BALANCE

LOW FORM

With Stainless Steel Beam and Pan

Capacity 1610 g.

Sensitivity 0.1 g.

- Three Scales Easily Read at Eye-Level
- Beam Arrest for Faster Weighing
- Base Silver-Gray Hammerloid Finish

No. 4048

Hard, Corrosion-Resistant COBALITE KNIFE EDGES

• **Fast, Accurate Operation**

• **Rugged, Compact Construction**

4048. TRIPLE-BEAM BALANCE, Low Form.

The balance is 5 1/4 inches high and 15 1/4 inches long. The pan is 5 1/4 inches in diameter. Two extra weights to give a capacity of 1610 grams are included.
Each, \$21.00

4048C. PLASTIC COVER,

For Nos. 4048, 4050.

Each, \$0.90

• Covered AGATE BEARINGS

Pressure Transducer

**Measurement of Differential
Pressures of Biologic Origin**

Provides a precise method of measuring and recording minimal positive or negative changes in pressure. Wide pressure range (0-400 mm Hg) and sensitive frequency response (40-50 cycles/min.) suggest wide application in Warburg and similar apparatus, pulmonary air, plural fluid, cerebro-spinal fluid and wherever accurate pressure differential measurements are indicated. Requires no special amplifier or bridge circuits. For further information request Bulletin 23-100

68400 Physiological Pressure Transducer complete with D.C. power supply and operating instructions. For 115 Volt A.C. (without recording attachment)

Each \$425.00

68400A — Electrocardiograph, Burdick, Model EK-2 (as illustrated) \$768.00
