(See issue of 17 May for comprehensive list)

The Cahn Electrobalance is easy to operate, fast, rugged and portable, yet has accuracy equal to many delicate micro balances. Balancing time takes but a second or two. Complete weighings average less than a minute. Readings are taken directly in micrograms.

Controls are simple to understand. Sample weight is balanced by torque applied electrically in a magnetic field.

This electric micro balance is completely self-contained, requiring no external

power or utilities. Immune to environment, it can be placed anywhere, regardless of vibration, temperature, air currents or levelling.

The Cahn Electrobalance weighs less than 12 pounds and is enclosed in an aluminum case with an attractive blue-gray baked enamel finish. Its value is not limited to present day micro techniques. You may find it advantageous to re-evaluate other larger scale operations.

**WIDE RANGE
OF
SAMPLE
WEIGHTS**

Range	Sensitivity	Accuracy
0-5 mg.	1 microgram	2.5 micrograms
0-10 mg.	2 micrograms	5.0 micrograms
0-20 mg.	5 micrograms	12.0 micrograms
0-50 mg.	8 micrograms	30.0 micrograms

PRICE: Number B-1364X Cahn Electrobalance complete with three batteries, two stirrups, ten disposable aluminum pans, tweezers, a set of calibrating weights (one for each range—5, 10, 20 and 50 mg.), and an instruction manual. Overall size: 12" h x 10" w x 7" d. \$615.00

New 4-page brochure gives complete details. Write for your copy today!

Precision is 0.02%, accuracy about 0.05% of full scale on each range. Accuracy on the two lower ranges is within the tolerance on Class M weights, the most accurate scientific reference standards made. You can use this balance for the most critical work.

MICROMANIPULATOR "CAILLOUX"

Unmatched flexibility of movements in all directions in space are achieved by natural hand movements under magnifications of 100 X to 2000 X without adjustment. The "Cailloux" advanced design combines maximum speed, precise response and stability with unusual ease of operation. Back-lash, parasitic vibrations and lag are eliminated. Prolonged manipulations can be conducted without fatigue. Includes many additional exclusive features.

PHIPPS & BIRD

PIPETTE DRYER

In the laboratory, this large capacity Pipette Dryer is particularly recommended for the thorough drying of pipettes of any size up to 375 mm. in length. . . . Cylinder is mounted on vented base with specially designed heater in lower end of cylinder. This instrument is designed to take the standard rack of a 6" pipette washer. Rack is taken out of washer, drained for about a minute, then placed right into the Dryer. This method of drying means less handling by the technician, thus greatly reducing the hazard of breakage. Complete with cord and plug, but without rack. 115 volts, AC or DC

Without obligation, send us complete information on your Pipette Dryer.

EQUIPMENT NEWS

The information reported here is obtained from manufacturers and from other sources considered to be reliable. Science does not assume responsibility for the accuracy of the information. All inquiries concerning items listed should be addressed to Science, Room 740, 11 W. 42 St., New York 36, N.Y. Include the name(s) of the manufacturer(s) and the department number(s).

■ **FILTRATION UNITS** for removal of minute particles from water have capacities ranging from 3 to 10 gal/min. The fineness of particle removal ranges from 0.1 to 25 μ . (Heico Inc., Dept. S354)

■ **SWEEPING OSCILLATOR** covers the range of frequencies from 1000 to 15,000 Mcy/sec with a power output of from 10 mw to 1 w by means of seven interchangeable units. Used in conjunction with the man-

ufacturer's rapid-scan Ratioscope, the oscillator makes possible direct and instantaneous measurements of reflection and transmission coefficients, directly viewable on an oscilloscope, eliminating the need for point-by-point measurements or for maintaining a constant power input to the device under test. (Polarad Electronics Corp., Dept. S351)

■ **MAGNET WIRE** coated with Teflon is being offered in a kit for research and development use. The kit contains an assortment of 12 spools of wire in gage sizes 20 through 42 A.W.G. (Tensolite Specialties Inc., Dept. S365)

■ **MAGNETIC-TAPE HANDLER** consists of ten separate identical units or bins, each with a capacity of over 8×10^6 bits. Each bin normally contains 500 ft of 1-in. wide magnetic tape for 14-channel recording with 200 pulse/in. density. Each bin is

equipped with its own record-playback head which may be switched by relay to a common output. Dual speeds of 30 or 60 in./sec or other combinations are provided. (Potter Instrument Co., Inc., Dept. S362)

■ **SILICON** of semiconductor grade is commercially available. Three grades, research, premium, and standard, will be marketed. The research grade has a resistivity greater than 200 ohm cm and impurity content less than 1 part in 10^9 . Minimum resistivity of the premium grade is 100 ohm cm and of the standard grade 10 ohm cm. (Texas Instruments, Inc., Dept. S356)

■ **GEM-TESTING SET** is based on the fact that neither index of refraction nor specific gravity separately will identify a gem but that together these properties will identify a gem with certainty. The set includes a "Refractoscope" used with six index-of-refraction liquids and a set of nine specific-gravity liquids. (R. P. Cargille Laboratories, Inc., Dept. S357)

■ **FREEZE DRYING UNIT** handles 300 5-ml serum bottles simultaneously. The trays upon which samples are placed revolve once each minute in front of a radiant-heating source to heat all samples uniformly. A tilting-type McLeod gage furnishes vacuum measurement. Dimensions of the unit are 12.5 by 23.5 by 15.5 in. (E. Machlett and Son, Dept. S358)

■ **STAINLESS STEEL FLASKS**, insulated with light-weight, rigid, closed-cell plastic, are said to provide insulating properties superior to vacuum flasks. The steel flasks, of wide-mouth design, are available in 2-, 4- and 8-lit capacities. (E. Machlett and Son, Dept. S360)

■ **OSCILLOSCOPE** covers the frequency range from direct current to beyond 50 Mcy/sec. Sweep can be driven at repetition rates as high as 250 kcy/sec and as slowly as 0.02 sec/cm. The y-axis amplifier is a three-stage direct-coupled type. Other features include a pulse rise time of 7 μ sec, attenuator ranges from 0.2 to 200 v full scale and an a.-c.-d.-c. synchronizing circuit that permits selection of the portion of the synchronizing signal from which to trigger the sweep. The oscilloscope is built up of six interchangeable units. All operating voltages are regulated. (Allen B. DuMont Laboratories, Inc., Dept. S359)

■ **NUCLEAR POWER PACKS** are capable of delivering energy pulses up to 337,000 ergs. The power pack is based on a nuclear battery which converts nuclear energy directly into electric energy in current ratings from 5 to 5000 μ a and equilibrium voltages in the order of 10 kv. The battery current is used to charge

in balances...

*Easy, accurate weighing
with Ainsworth
chainweight balances*

"The chemists I talk to all know that it is easier and faster to operate a chainweight than to fiddle with a beam rider and small milligram weights.

"They realize too that a chainweight is not a unit of mass — just a variable weight calibrated to the balance.

"The calibration takes some doing, and here are some of 'the little things that count,' on Ainsworth Chainweight Balances, which result in easy, fast, and accurate weighing.

"free hanging chain

"sapphire jewel and adjustable pivot mounting

"chain suspended from graduated tape (you can't move the tape without moving the chain)

"ball bearing pulleys

"direct drive

"solid 14K gold chain"

*Just call your laboratory supply salesman...he can give you more information about Ainsworth proved and improved balances and weights...

a capacitor. Means are provided to regulate capacitor voltage at values between 75 and 750 v. The power packs have a shelf or use life of 25 yr. They are supplied encapsulated in metal cases provided with standard connectors. (Universal Winding Co., Dept. S353)

■ **COPPER-CLAD LAMINATE** for printed-circuit applications is described in a 4-page bulletin. The laminate is a paper-base plastic which can be punched cold in thicknesses to 1/16 in. The material is trade-named "Cirprint." (Formica Corp., Dept. S355)

■ **VIBRATION CALIBRATOR** uses a noncontacting probe to measure vibrations of frequencies from 10 to 20,000 cy/sec and amplitudes 20 to 20,000 μ in. Accuracy is said to be ± 5 percent. The surface opposite which the probe is positioned must have a minimum diameter of $\frac{7}{8}$ in. and must be made of nonmagnetic metal. Other materials can be measured by cementing a piece of copper or aluminum foil 0.01-in. thick to the surface. The instrument is direct-reading in thousandths of an inch peak-to-peak displacement. An output for oscilloscopes is provided. (Tel Instrument Electronics Corp., Dept. S363)

Two superb microscopes

WILD M 20

Meets the very highest requirements for research and scientific exploration, and provides unmatched versatility in many fields of microscopy.

Features include sextuple revolving nosepiece if desired • 20 Watt built-in illumination • beam splitting phototube for binocular focusing for photomicrography • phase contrast plus a complete line of attachments for every observation method.

WILD M 11

A highly precise instrument, ideal for the laboratory and many research applications.

Lightweight, easily portable and self-protected by the sturdy steel hood, the Wild M 11 offers a degree of versatility and precision far beyond its price and size. Outstanding optics, low-placed fine adjustment, easily interchangeable accessories and many other features make this a most noteworthy instrument for hospitals, expeditions and educational institutions.

DETAILED DESCRIPTIONS AND TECHNICAL DATA ARE GIVEN IN BOOKLETS M 20 AND M 11. WRITE FOR YOUR COPIES TODAY!

POSITIONS WANTED

Bacteriologist, Ph.D.; desires academic position; experience in research and teaching pharmacy students. Box 169, SCIENCE. X

Botanist-Plant Physiologist, Ph.D., now at major university, desires new position. Teaching experience plant physiology, ecology, elementary botany. Established research. Box 163, SCIENCE. X

Physiologist, Ph.D., general and electrophysiology, electronics servo; experienced in teaching and research in physiology, and in engineering. Desires teaching and/or research. Box 159, SCIENCE. 5/31

POSITIONS WANTED

Biologist, Ph.D. Wants academic appointment in bacteriology and botany in Southwest, West, or South. Box 168, SCIENCE. X

Biologist, M.A., Ph.D. (August). Genetics, embryology, physiology. Experienced college biology teaching, animal colony and instrument maintenance. Research interest, mammalian genetics. Desires teaching, research. Box 2212, Madison, Wis. 6/14

Biophysicist, 9 years' experience; research, instrumentation, teaching; cardiovascular, neurophysiology, psychosomatic. Box 175, SCIENCE. X

Medical-Science Writer; 42; 12 years newspaper, newsmagazine; 4 years university public relations. University or industrial, western U.S. preferred. Box 160, SCIENCE. 6/7, 14

Pharmacologist; 8 years, professor and head, pharmacognosy department, state university; 4 years, director of research, pharmaceutical company. Medical Bureau, Burneice Larson, Director, 900 North Michigan Avenue, Chicago. X

Ph.D., Physiology of reproduction, minors in biochemistry and physiology. Teaching as well as laboratory experience with large and small animals. Seeking academic teaching (physiology, physiology of reproduction, endocrinology) and/or research or industrial position. Box 176, SCIENCE. X

Teaching General Physiology or Biophysics. B.S. in chemistry, M.A. in medical sciences, D.Sc. in physical chemistry. Teaching experience human physiology. Wide experience in research. Box 170, SCIENCE. X

Soil Microbiologist, Ph.D.; research and teaching experience. Desires challenging position. Box 167, SCIENCE. X

POSITIONS WANTED

Biochemist, Ph.D., 37; 10 years' industrial research, intravenous solutions, nucleic acid derivatives. Desires challenging position. Box 164, SCIENCE. X

Biochemist, Clinical Chemist, Ph.D.; certified in clinical chemistry and human nutrition; teaching experience; directed clinical laboratory and research section; numerous publications; experienced with metabolic methods and isotopes. Desires to associate with an active group; Midwest or West. Box 158, SCIENCE. 5/31

POSITIONS OPEN

(a) Assistant Medical Director; experience in clinical research required; pharmaceutical company; Midwest. (b) Physician with comprehensive knowledge of medical advertising and pharmaceutical field; \$18,000. (c) Psychologist, Ph.D.; public health department; outside U.S.; \$7000-\$8000. (d) Bacteriologist, well qualified in virology; Ph.D. with minimum of 4 years' experience required; research department, teaching hospital, university medical center; Midwest. (e) Clinical Chemist, Ph.D.;

qualified to supervise department; ample opportunity for research; department well staffed, well equipped; 290-bed general hospital; New England. (f) Zoologist, Ph.D.;

with formal training in general and mammalian physiology; state university; instructor or assistant professor; West. S5-5 Medical Bureau, Burneice Larson, Director, 900 North Michigan Avenue, Chicago. X

Zoology Department, Duke University. Applications for part-time positions in teaching and research are invited. Applicants with a master's degree and teaching experience will be favored. These openings provide generous opportunities for participating in course work and research toward the Ph.D. Inquire of Dr. Karl M. Wilbur, Chairman, Department of Zoology, Duke University, Durham, N.C. 5/24, 31; 6/7

SCIENCE | The weekly magazine of research

May 31, 1957

TO RESEARCH DIRECTORS

It is a source of great encouragement to us that more and more companies are beginning to consult their research departments in regard to advertising. For many years, we have felt that the Research Director could contribute substantially to the promotional activities of industry.

Industry's growing dependence on research has played a decisive role in bringing about this change. Most companies now realize that their futures depend on new applications for their existing products. Because of this, they are anxious to make sure that news of their activities gets to the research scientist.

If you have a voice in your company's advertising policies, you will certainly want to know more about SCIENCE MAGAZINE. Let us show you how SCIENCE can do an effective job of carrying information about your products to research workers in every phase of industry and government.

"Facts about SCIENCE," a new booklet, gives detailed information on circulation and readership. To get your copy, just drop us a line.

SCIENCE
Room 740
11 West 42nd Street
New York 36, New York

Sincerely yours,

Earl J. Scherago
Advertising Manager

FLUORESCENCE MICROSCOPY

FLUORESCENCE MICROSCOPY is becoming increasingly important in fundamental research, histology and physiology, as well as clinical and diagnostic routine examinations in haematology, bacteriology and parasitology.

THE CARL ZEISS LARGE FLUORESCENCE EQUIPMENT was especially designed to completely fulfill the requirements of modern fluorescence microscopy. Ultra-violet or blue-violet excitation is established by means of special filter combinations, permitting fluorescence observation over the entire range of the visible spectrum. Transparent as well as opaque specimens can be examined with this equipment.

A high-pressure mercury vapor burner produces such intense luminosity that the equipment is not only suitable for observation but also photomicrography. For this type of work we recommend the well-known Attachment Camera with beam-splitting prism for fluorescent light and camera body for 35mm color or black-and-white films.
