

Meetings and Societies

Nerve Cells

The Institute of Neurology and Brain Research, located in the mountains, 5000 feet above sea level, near Caracas, Venezuela, was host to about 40 scientists from different countries, 15-22 Mar. The conference, a symposium on "Submicroscopic Organization and Function of Nerve Cells," brought together, for intimate discussion, the fields of cell ultrastructure, neurochemistry, and neurophysiology. The plan of uniting these diverse fields was entirely successful because of the enthusiastic participation of the guests and of the members of the host institution.

The participants included V. L. van Breemen, G. C. Causey, H. Engström, H. Fernández-Morán, J. B. Finean, H. S. Gasser, J. H. Luft, S. L. Palay, K. L. Porter, E. De Robertis, H. Ruska, and F. O. Schmitt, who reported on ultrastructure studies by different methods; G. H. Bourne, R. Couteaux, J. Folch-Pi, L. C. U. Junqueira, H. Hydén, L. E. Roth, J. Runnstrom, T. Teorell, and G. Wald, who dealt with biochemical, physicochemical, and general cell physiology; and H. Autrum, C. G. Bernhard, T. H. Bullock, A. Forbes, R. Jung, S. W. Kuffler, R. Lorente de Nó, D. P. C. Lloyd, P. Mueller, E. F. MacNichol, Jr., A. von Muralt, H. Olivecrona, D. Ottosson, G. Svaetichin, J. W. Woodbury, and Y. Zotterman, who discussed neurophysiology. The proceedings will be published by the Society of Cell Biology, under the editorship of R. Brown, of the University of Oxford.

In addition to the scientific activities, there was a good opportunity to inspect some parts of the rapidly expanding technologic developments of Venezuela and to form an opinion of the changing pattern of life in the country.

The institute, which has been in operation for only about 1 year, has already developed into a promising international center under the able and imaginative leadership of its director, Humberto Fernández-Morán. The exceedingly rapid progress in construction of facilities has been matched by scientific advances. There is an active program in electron microscopy, x-ray diffraction, nuclear magnetic resonance spectrometry, low-

temperature research, and electrophysiology. The workshop facilities and technical installations are all excellent. A nuclear research reactor is now being constructed. The present laboratories constitute a pilot plant, and many more developments are planned. These new scientific expansions in South America should be welcomed by the international scientific community. It is to be hoped that scholarly scientific inquiry and the atmosphere of a free and independent intellectual life will develop, together with the rapidly advancing new technology of Venezuela.

Turns Apparatus ON or OFF

STANDARD "TWO-TIMER"

**SET IT!
FORGET IT!
AS SIMPLE
AS THAT!**

The "TWO-TIMER" is a rugged, versatile 20-hour timing device with a high rating (1650 watts) for general use as an automatic time control attachment for laboratory, industrial and office equipment.

SIMPLE TO USE

You just plug the "Two-Timer" into a 60-cycle 110 volt line outlet, then if you wish to have a device turned off at a certain time, plug it into the black socket on the "Two-Timer" or if you want it turned on, plug into the white socket. A multiple socket adapter may be used if you wish more than one device turned on or off at the same time. The dial face is calibrated in hours—set the "Two-Timer" knob at the number of hours (or fraction thereof) you wish to operate (turn on or turn off) your equipment. Set it and forget it—it's as simple as that.

SPECIFICATIONS

RANGE up to 20 hours. Calibrated in hours and fractions thereof.

OPERATES on 105-120 volts A.C. 60 cycle.

RATED load 15 amps at 110 volts (1650 watts).

POWERED by Bristol "Circle B" synchronous timing motor.

SUPPLIED in a rugged hammertone steel case, 2" x 2" x 4".

STEROX-O-MATIC

GAS STERILIZATION

SAFE • FAST • EFFICIENT

Development of the Castle Sterox-O-Matic Gas Sterilizer introduces an entirely new concept of hospital aseptic routine.

Heat and moisture-sensitive supplies too delicate for conventional processing may now be Steroxide sterilized in the hospital countless times without injury. Substantial savings in sterile supply costs will result.

Adhesives, cystoscopes, catheters, eye instruments, powdered goods ... even electric cords may now be sealed, processed and distributed in paper or plastic containers.

Now, there is nothing that cannot be sterilized 100%.

Newly developed water ejection unit speeds cycle, prepares spore-bearing organisms for killing action of gas.

Pre-packaged materials may be processed and distributed in their own containers for indefinite sterile storage
