

Science and Mathematics Teachers

The association, at recent meetings, has been emphasizing the relationships between science and mathematics and industrial processes and applications. Field trips through major industrial installations have been a special feature of the conventions and have been well attended. The CASMT, the only association that specifically emphasizes the relationships between science and mathematics, is undertaking a major examination of these relationships. Such activities are eminently important in view of the extensive reevaluation of both

The last in the series of meetings will be a conference on the disposal of radioactive waste, to be held in Monaco in

1495

November. It will be designed to bring together scientists from major atomic energy establishments, as well as oceanographers, geologists, and other experts in the associated sciences. Papers will be presented and, simultaneously, there will be panel discussions on the roles oceanography and geology could play in dealing with the problem. An IAEA panel set up last October is studying the question of disposal in the sea, but in view of the complexity of the subject it was felt that a conference would supplement the panel's efforts.
