A probing appraisal of American schools and the major current proposals for their reform—by 30 distinguished scientists, philosophers and educators.

Now that the Russians appear to be outdistancing us in scientific achievement, a vigorous controversy has arisen concerning the present and future of American education. In this volume—edited by the eminent Yale philosopher—you will find the current debate between the advocates of humanistic vs. scientific education, vigorously expounded by Douglas Bush and Ernest Nagel. You will read Philippe LeCorbeiller on the state of the nation's "scientific literacy"—Margaret Mead on the problems of communication between scientists and the rest of society—Warren Weaver and Fletcher G. Watson on school science curricula and the shortage of teachers—Alfred North Whitehead on how to teach science.
