

estimating trends, procedures, thinking habits, biases, or ingenuity of various scientific groups.

The Conference on Science Manuscripts will try to arrange for some continuing effort to manage our rapidly growing science archives. It may seek the cooperation of the History of Science Society, the American Association for the History of Medicine, the Society of American Archivists, and other interested organizations in holding annual meetings. American scientists are now being reminded of their responsibility to keep in good order their individual scientific records and correspondence. Such record-keeping, in itself, may give the scientist a better understanding of the genesis and growth of his scientific ideas and of the psychological factors involved in reaching those agreements on scientific conclusions which constitute their validity.
