

estimating trends, procedures, thinking habits, biases, or ingenuity of various scientific groups.

The Conference on Science Manuscripts will try to arrange for some continuing effort to manage our rapidly growing science archives. It may seek the cooperation of the History of Science Society, the American Association for the History of Medicine, the Society of American Archivists, and other interested organizations in holding annual meetings. American scientists are now being reminded of their responsibility to keep in good order their individual scientific records and correspondence. Such record-keeping, in itself, may give the scientist a better understanding of the genesis and growth of his scientific ideas and of the psychological factors involved in reaching those agreements on scientific conclusions which constitute their validity.

# ***NOW! Snap it... See it...***

## **IN BIG POLAROID LAND 4" x 5" PRINTS**

### ***AO Spencer Photomicrographs ... just 60 seconds from snap to finish***

Now your AO Photomicrographic Camera can be equipped with the new Polaroid Land Film Holder to give you big 4" x 5" finished, glossy prints... ready for your files... in just 60 seconds. A coupled visual and photographic system allows you to shoot exactly what you see... instantly and effortlessly. Processing of the picture takes place right in Polaroid's 4" x 5" Holder, thus possible errors in exposure, illumination or focus can be rectified immediately.

If you prefer, you have a wide choice of 5 other readily interchangeable camera backs; the Polaroid Land Camera Back for roll film, paper prints and transparencies, 4" x 5" fixed back, 4" x 5" Graflok back, 35mm back and Bantam (roll film) back. You choose the camera back and film best suited to your specific requirements.

This new "Big-Size" 4" x 5" Polaroid Film Holder is available from your industrial photographic supplier.

Here, the No. 682G Camera being used with the AO Spencer Series 4 Microstar proves an ideal combination. The built-in base illuminator provides convenient Koehler-type illumination. You select specimen area and do all preliminary focusing through binocular portion of trinocular body... focus critically with the telescopic eyepiece.

The sturdy vertical pillar, the easily adjustable camera support, the camera back and the Microstar all combine to provide a compact unit in precise, rigid alignment. Successful photomicrography becomes a "snap".

Try it and see for yourself. Your AO Representative will be happy to arrange a convincing demonstration for you.
