SEPARATION

The Long Life Sieve is designed to allow the operator to replace the screen upon failure. The savings in cost of testing is realized when the cost of the replacement of the screen alone is compared with the cost of the replacement of the sieve screen unit as now practised. The frame of the sieve is constructed of chrome plated brass.

Vac-Pres Filters are bacteriological filters which may be used for vacuum or pressure filtration. These filters are available in 10 ml, 50 ml and 250 ml capacities. Other sizes upon request. The Vac-Pres Filters manufactured of brass with the interior silver plated and the exterior chrome plated. Stainless steel also available.

The CSI High Speed Angle Centrifuge gives the laboratory worker a reliable and modern high speed centrifuge with maximum safety and flexibility by its unit design and interchangeable standard rotors. Speed 14,000 rpm plus. (Pat No. 2,699,289)

Determine both Na and K in a single sample run

Baird-Atomic Flame Photometer makes fast, precise biological analyses reproducible to $\pm 0.5\%$

With a flick of a switch—and from a single serum sample—the Baird-Atomic Flame Photometer shows both Na and K concentrations. Because determinations are made in one step, no time is wasted between runs in cleaning and recalibration. Results are read directly, instantaneously in meq/liter without tedious calculations. Only a 0.05 cc sample—diluted 1:200—is needed to make both determinations, plus a rerun for checking.

The B/A Direct Reading Flame Photometer combines the accuracy of a double beam instrument with ease of readout of a single beam instrument. It operates equally well on manufactured, natural or bottle gas. Because of its sealed air system and shielding, readings are not affected by tobacco smoke, solvent fumes or other airborne contaminants during operation.
