Simple to Operate?

Well, not that simple, but the Baird Atomic Flame Photometer is a breeze for a skilled lab technician.

It is a highly accurate instrument, perfected after years of thorough field testing.

Here's what it is:

An internal standard, double beam flame photometer.

Here's what it does:

Gives direct reading, accurate measurements of K and Na from ONE microsample of serum.

Here's how it does it:

A known concentration of lithium is the standard: light from the lithium emission line falls on the "internal standard" phototube. A second phototube receives the signal from the K or Na line; the difference between the two energy signals is indicated on the meter, calibrated directly into milliequivalents per liter of K or Na.

Here's why you should have one in your lab:

You gain speed and reliability, eliminate calculations and references to curves. No errors due to variations in flame or in sample viscosity and pH.

Here's how to learn more:

Ask your Will Representative to show you how the B/A Flame Photometer saves hours of lab time . . . or send for our new 8-page brochure.

3 NEW COOMBS SERUMS

Anti- γ + Non- γ

Globulin Serum (Goat)

Individual antisera are selected on the basis of their immunoelectrophoretic behavior and pooled to obtain a reagent of maximum reactivity for both gamma and non-gamma antibodies. Recommended for routine use in all Coombs tests.

Anti- γ

Globulin Serum (Rabbit)

Specific for the gamma globulin fraction of human serum. Reacts best with cells that are coated with any of the various antibodies of the Rh system. Particularly useful in D_u testing. Helpful in the study of certain other antibodies, such as anti-K or anti-Fya.

Anti-Non- γ

Globulin Serum (Goat)

Reacts with cells coated with antibody which is not gamma globulin. Helpful in the study of antibodies occurring in ABO hemolytic disease, anti-Lea, anti-Lo_b, anti-Jk_a, and some examples of anti-K and anti-Fya.

Each of the three serums is available
in 2 cc dropper vials at \$5.50
per vial and 5 cc dropper vials at
\$11.00 per vial.

Use of the two selective serums (one specific for gamma globulin and the other for non-gamma globulin) is especially helpful in the study of sensitization involving more than one antibody and in which both gamma and non-gamma varieties of antibody occur — for example, sensitization involving both anti-Rh and anti-Jk_a.
