

The New **COURTAULD ATOMIC MODELS**

Build large transparent models like these polypeptide chains—and handle them with ease.

The space filling Courtauld Atomic Models are the only system with elastically distortable bond angles.

They are now made of hollow plastic—strong and light.

Brass connecting links are housed in a new plastic turret—assembly is fast, easy and without tools.

Molecules have open structures—bond lengths and directions can be studied and measured.

GME

- Designed to indicate which test tubes in the fraction collector contain material of interest
- Fit on the apparatus mast of the Fractionator directly above the volumetric unit
- Equipped with electrical output to operate a recorder
- May be connected to any make of fraction collector.

Interchangeable interference filters make it possible for one absorption meter to be used as either a UV-265IF or a UV-280IF.

Cary Recording 15 *Spectrophotometer*

NEW MODEL

Another fine instrument in the Cary tradition of highest quality is the new Model 15 Recording Spectrophotometer. Significant design advancements contribute to its outstanding, versatile performance. Instrument operating limits, 1750-8000 Å, extend precision usefulness over a broader range. Reduced beam size (1.0x0.3 cm) assures maximum reliability with minimum samples. Coupled scan and chart drive affords extreme operating simplicity with single variable speed control. For complete technical information on the Model 15, ask for Data File E28-71.
