## SCIENCE TEACHING APPARATUS EXPENSIVE?

NOW WITH *Physikit*<sup>®</sup> YOU CAN

## MAKE YOUR OWN VACUUM TUBES FOR PENNIES!

Standard techniques for making high vacuum tubes ( $10^{-7}$  to  $10^{-8}$  mm Hg) involve prohibitive expenditures for equipment and highly skilled technicians. With MACALASTER BICKNELL's new High-Vacuum Technique and Physikit students can now make inexpensively their own cathode-ray tubes, diodes, triodes, phototubes, and even such specialized apparatus as a mass spectrometer, or a tube with which the time of flight of electrons or ions can be measured.

PHYSIKIT 1000 A includes all the necessary materials designed to make 4 Diodes, 4 Triodes, and 8 Cathode Ray Tubes. Only \$69.50.

Physikit, together with MACALASTER BICKNELL's new High Vacuum Technique, a method using activated charcoal,  $\text{CO}_2$ , a special gettering regime, and a vacuum gauge, enables the teaching of modern microphysics at a cost within your budget.

## SCIENCE TEACHING APPARATUS EXPENSIVE? NOT ANY MORE!

MACALASTER BICKNELL CORPORATION'S new concepts in design and quantity manufacture permit low price levels hoped for by educators — but never before achieved. So valuable to learning — individual student participation in laboratory work is now possible with no sacrifice in quality, durability or scientific validity.

Here are three apparatus kits of wide teaching application. These and twenty-seven others are described and illustrated in our catalog of Authorized PSSC Apparatus and Supplementary Materials.

**Ripple Tank Kit** — Used for study of general wave phenomena as well as in experiments on wave propagation; reflection, refraction, diffraction, frequency-wave length-velocity relationship and interference. One Kit is recommended for 4 students. Each \$14.64.  
(High Power Light Source Kit not included)

**Adjustable Phase Wave Generator** — Produces circular waves from a single-point source, or waves of known and controlled phase between two-point sources, applicable to any experiment where wave interference between two-point sources is studied. Frequency, point spacing, and phase relationship between sources may be varied, and nodal line positions measured for any of those parameters. Each \$2.50.

**High Power Light Source Kit** — Used for illumination of the Ripple Tank for projection of shadows of moving objects, and for use with slits or optical elements. Light from its window issues either from a point source (off the end of the filament) or from a line source (off the side of the filament). Each \$2.20.
