## LINE-OPERATED MULTIPLIER FLUORESCENCE METER

model  
**540**

- High sensitivity . . . full scale for 0.001 microgram quinine sulphate
- Micro-fluorimetry . . . liquid volumes down to 1 ml
- Low blank readings . . . linear instrument response
- High sensitivity nephelometry . . . minute turbidities
- Fluorescence evaluation of powders, pastes, and solids; also for spot-tests on filter paper without elution
- Selection of filters, interference filters, and sample holders

## ASTO

*Difco reagents for the diagnosis of  
Group A Streptococcal Infections*

- RHEUMATIC FEVER
- GLOMERULONEPHRITIS

ANTISTREPTOLYSIN O TITERS (ASTO) and their relation to pathological conditions in Group A streptococcal infections have established the importance of this determination as a routine clinical test.

*Bacto-Streptolysin O Reagent*—a dehydrated, standardized and stable reagent requiring only rehydration with distilled water. Antistreptolysin O titers have been impractical for routine diagnosis because of the difficulties in preparing the reagent. Bacto-Streptolysin O Reagent is a standardized preparation permitting the routine performance of this diagnostic test in all clinical laboratories.

*Bacto-ASTO Standard*—an antiserum titred in Todd units for use as a control in the determination of antistreptolysin O titers.

*Descriptive literature sent upon request.*

**PERKIN-ELMER  
INTRODUCES A  
QUALITY-BUILT,  
LOW-PRICE  
VAPOR  
FRACTOMETER**

For laboratories that must have a full-quality, thoroughly reliable gas chromatograph at an economical price, Perkin-Elmer now offers the Model 154-L Vapor Fractometer. This new instrument, suitable for routine and research uses, features high sensitivity and wide temperature range.

A broad selection of sample-handling and analytical accessories is available. Send for the illustrated brochure and complete information on the entire 154 product line. Write Instrument Division, Perkin-Elmer Corporation, 910 Main Ave., Norwalk, Conn.

Serum, Plasma or Urine  
determinations...quickly  
and accurately...from  
a single drop

with the new

TS\* meter

(a Goldberg Refractometer)

**The new AO TS Meter** requires just *one drop* of sample to provide immediate, accurate determinations of total solids, specific gravity, refractive index, protein concentration or water concentration in serum, plasma and urine.

**Minute Sample Required:** As little as 0.02 ml of sample is sufficient for the most precise determination. Minute sample previously reported "q.n.s." now can be read routinely for example, in pediatric urinalysis, in oliguric patients, and in collection from ureteral catheters or microhematocrit tubes.

**Temperature-Compensated for Unsurpassed Accuracy:** The AO TS Meter provides automatic temperature compensation for all aqueous solutions. Differences in room, instrument or sample temperatures do not affect readings. Error from these sources is reduced to less than 0.1% over the range of 65° to 95°F. Readings are consistently obtained with a degree of accu-

racy, speed and reproducibility significantly better than those obtained with urinometers, the falling-drop method or with instruments uncompensated for temperature.

**Direct Readings:** You make an immediate analysis directly from the built-in scale . . . without references to graphs, tables or thermometer readings. Two models are available. Model 10400 provides determinations of total solids in plasma or serum and urine specific gravity; model 10401 gives readings of protein concentration and refractive index.

**\*Total Solids Meter.** The AO TS Meter and this method of analysis was developed in close cooperation with Dr. A. V. Wolf, Head of the Department of Physiology, University of Illinois, College of Medicine, Chicago, Ill.
