AMERICAN ASSOCIATION FOR THE ADVANCEMENT OF SCIENCE

IN VIVO pO_2 MEASUREMENT

... immediately, continuously

You no longer need to withdraw samples to measure oxygen tension in blood or fluid. The Beckman oxygen micro electrode, sheathed in an 18-gauge arterial needle, goes to the source... live tissue, circulating blood, body fluids in their natural environment... and transmits a continuous measurement of pO_2 from within the subject. You observe changes as they happen. You eliminate gaps in information. Since pO_2 is read directly, you do away with tedious calculations.

The versatile multi-channel amplifier provides scales for pCO_2 and pH as well as pO_2 , and will accommodate Severinghaus-type CO_2 electrodes, blood pH electrodes and other Clark-type oxygen electrodes. Special configurations of the oxygen micro electrode and amplifier can be made for unusual applications.

For further information about the oxygen micro electrode and amplifier... described as the Model 160 Physiological Gas Analyzer... write Beckman Instruments, Inc., Spinco Division, Stanford Industrial Park, Palo Alto, California. Ask for data file 160-5.

40% + H³ COUNTING EFFICIENCY

IN NEW TRI-CARB[®] SPECTROMETERS

■ Integral counting efficiency for H³ samples in the new Tri-Carb Liquid Scintillation Spectrometers has been increased to more than 40%. Differential efficiencies are increased accordingly. More significantly, the Efficiency²: Background ratio has been doubled, so that low activity samples can be counted to the same statistical accuracy in half the time formerly required. Add the new 200 sample-capacity automatic changer and double the samples counted in each run with no increase in total counting time. ■ Other features of the new Tri-Carb Spectrometers: Precision temperature-controlled operation — accurate within $\pm \frac{1}{2}^{\circ}\text{C}$ • choice of either high speed parallel-entry readout or serial readout compatible with automatic data-processing equipment • completely separate channels of analysis for optimum performance in double-label counting • solid state circuitry, of course. ■ For more information, call your Packard Sales Engineer or write for Bulletin AD-1019.

GME-LARDY WARBURG APPARATUS

The original circular model
— proven reliability in
many years of operation

AMPLITUDE AND RATE
CONTINUOUSLY VARIABLE

AMPLITUDE 0-5 cm

RATE 75-150 PER MINUTE

- **Quiet Operation**
- **Convenience** — Manometer holders rotate 180° for easy preparation on apparatus. Circular gassing manifold is available for placing on the center casting of apparatus; the manifold can rotate with the manometers as it receives its gas through the bearing. These two factors obviate the need for a separate manometer stand.
- **Accurate Temperature Control** — Provided by means of an electronic relay actuated by a hermetically sealed thermoregulator. Accuracy of control is better than $\pm 0.02^\circ$ Centigrade.
- **Manometers easily read while flasks are in motion** — Pivotal shaking on an axis between the manometer arms provides maximum motion of the flask and minimum movement of the manometers.
- **Manometers stop individually** — Lifting the manometer holder disengages it from the drive pin and lowering re-engages it — both easily done while shaking is in progress.
- **Photosynthesis models available** — with a transparent bottom in the water bath. 30-watt lights provide 1000 to 1400 foot-candles on each lighted flask.

GME

GILSON

MEDICAL ELECTRONICS

Middleton, Wisconsin

On Madison's West Beltline Highway

MODEL WB-4

Accommodates 14 manometers
20" diameter
Temperature range ambient
to 50° C.
(Refrigerated model available)

MODEL RWB-3

Refrigerated model — Accommodates
18 manometers — 26" x 26"
Operates from 0° C. to 50° C.
(Non-refrigerated model available)

Apparatus accommodating 20 manometers available
on special order. Send for complete glassware list.

CRISP-SHARP SPECIMEN PICTURES OR PROJECTION SLIDES IN COLOR, BLACK-AND-WHITE OR 10-SECOND POLAROID

The versatility of the Nikon 6 Optical Comparator has been demonstrated in many ways. In addition to its function as an inspection and measurement instrument, it is also capable of producing pictures or slides of specimens under inspection, in color or black-and-white, or on Polaroid material.

A camera-back attachment is available for this purpose. The attachment interchanges with the comparator viewing screen assembly. It has its own ground glass panel for focusing and selecting the area to be photographed.

The camera-back attachment is utterly simple to use. It utilizes the optical system and illumination of the comparator. No darkened room is required. It is available for standard film and plates in sizes up to 5x7 inches. The 4x5 size can be used with the Polaroid #500 holder.

Essentially the Nikon 6 Optical Comparator is a projection microscope. Any object, substance or specimen placed on its

stage appears as a bright, magnified image on its 12" screen, where it can be studied and observed by several people simultaneously in the comfort of a normally lit room.

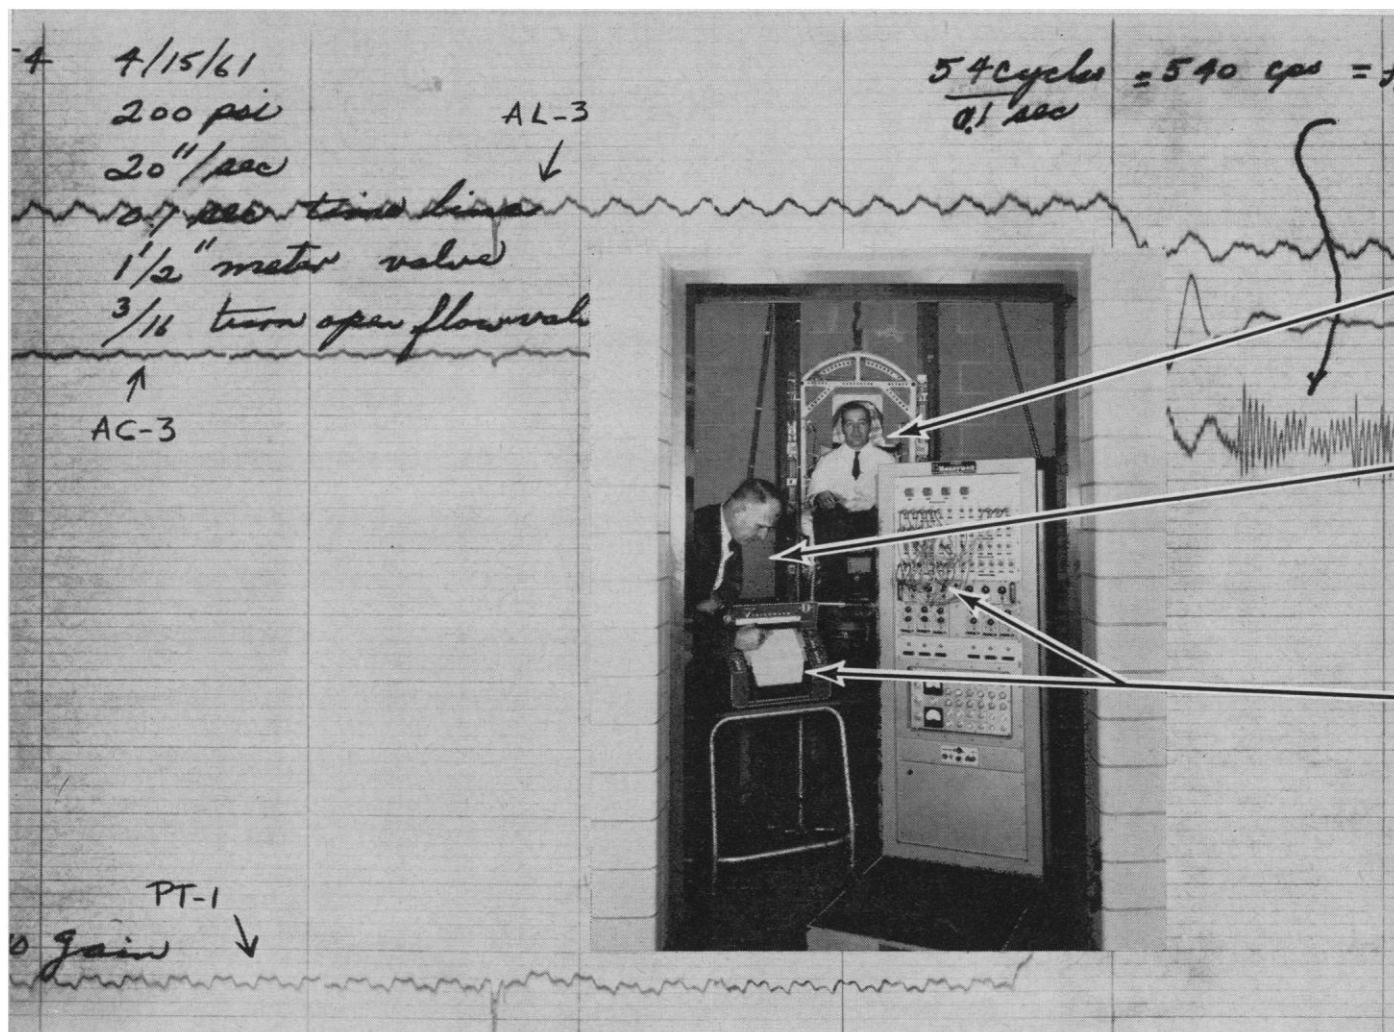

The Nikon 6 provides incident as well as transmitted illumination. Opaque as well as translucent substances and specimens can be inspected at magnifications from 10X to 100X — extendable to 500X. The Nikon 6 is being used for measuring and evaluating ultracentrifuge and electrophoresis patterns. It is being used in chromatography, and in the study of electron photomicrographs. It has even been used for examining specimens in petri dishes and in a wide variety of applications requiring fast, accurate inspection of visual data or images. Its measurement accuracy is within 2 microns.

For complete details, write to Dept. S-6.

NIKON MODEL 6 OPTICAL COMPARATOR

A Honeywell Visicorder Oscillograph charts stress on the human

Wayne State University, Detroit, is using a unique Visicorder system to study the effects of vertical acceleration on the vertebral column of the human body.

The purpose is to devise better, safer seating for automobiles and aircraft and, incidentally, to perfect better crash helmets and football helmets. Professor Lawrence M. Patrick of Wayne State is in charge of this research being conducted under a grant from the United States Public Health Service.

In the actual tests, an intact cadaver is installed in the air-driven accelerator. As the cadaver is accelerated vertically, compression strains on cervical, thoracic, and lumbar vertebrae are simultaneously recorded by the Visicorder system. Vertebral strain as a function of body restraint is charted through a series of restraint devices, and both mean and peak stresses are plotted.

The chart shown above, an actual Model 1108 Visicorder Oscillograph record, shows the peak versus mean strains on the three vertebra. Trace AC-3 is the third cervical; PT-1 is the first thoracic; AL-3 is the third lumbar; and the accelerometer trace shows the acceleration.

This is only one of a thousand uses for Visicorder Oscillograph Systems. The Model 1108 Visicorder, a peerless readout device, directly records up to 24 simultaneous channels of information on an 8-inch chart at frequencies from DC to 5000 cycles per second.

Honeywell

First in Control

Voigt Hodgson, Research Associate, demonstrates the position of the cadaver in the ejection sled.

Professor Larry Patrick, Wayne State University, makes a notation on the Visicorder Oscillograph.

The Honeywell T6GA Galvanometer Amplifier, six Honeywell AccuData III wide Band Differential D-C Amplifiers, and a Honeywell Model 82-6 Bridge Balance and Strain Indicator Unit are parts of the signal-conditioning equipment for the Wayne State data acquisition and recording system.

System body

A wide variety of signal conditioning equipment—like the T6GA amplifiers, Gage Power and Gage Control Units, and the Bridge Balance Unit—can be added to your recording system. In addition, Honeywell Magnetic Tape Systems can add storage facilities to your data acquisition and handling capacity.

For further details about these many and varied components—and for a selection of them that will fit your specific needs—write to Minneapolis-Honeywell, Heiland Division, 4800 East Dry Creek Road, Post Office Box 8776, Denver 10, Colorado.

the proficient and perplexes the uninstructed.” It seems that Soulides has failed quite completely to understand the classic techniques of latinization of Greek words for use in biological taxonomy.

R. E. BUCHANAN

Iowa State University, Ames

Use of Latin and neo-Latin nomenclature in systematic biology is a long-established practice with which I have no inclination to quarrel. My objection applies to the nomenclatural innovation which Buchanan has introduced in the current edition of *Bergey's Manual*—namely, the arbitrary latinization of the Greek nouns and adjectives from which the accepted latinized names of microorganisms originate. Let me again explain my point, with another example. On page 513 of the *Manual* we read that the species name *zooepidemicus* derives from the “Gr. noun *zōon* an animal; Gr. adj. *epidemi* prevalent” These two words are neither Greek nor Latin. They are not to be found in any Greek, Latin, English, or biological dictionary. They are personal versions of the real Greek words *zōon* and *epidemi*os. In this way hundreds of Greek words, throughout the *Manual*, have been remodeled and presented to the reader as “Greek” nouns and adjectives. In the instance of *Peptostreptococcus micros* (p. 537) the treatment was carried even farther; the phantom derivative *micrus* is given as the source of the actual Greek word *micro*s (small). In his reply Buchanan has ignored all these basic points.

The confusion resulting from this unusual procedure was adequately discussed in my original letter.

I would like to renew my plea that, in the interest of established scientific scholarship, the innovation in question be discontinued and the accepted system, used in the previous edition of the *Manual*, be restored.

D. A. SOULIDES

U.S. Soils Laboratory, Agricultural Research Service, Beltsville, Maryland

Water Conduits and Collectors

I would appreciate clarification of a point discussed in Robert Adams's informative article, “Agriculture and urban life in early Southwestern Iran” [*Science* 136, 109 (13 Apr. 1962)]. Adams writes of the “extensive use of

tunnels with periodic vent holes” both as water conduits and as ground-water collectors. Reference here is obviously to the famous *kharez*, *kanats*, or *fog-garas*. These are usually described in the literature only as collectors and conduits for ground water, not as part of a system for transporting surface runoff. For example, Tolman [*Ground Water* (1937) pp. 12–15] mentions the *kanats* of Dizful extending under the gravel bars of the Ab-i-diz River rather than diverting surface water from the river itself. It would be extremely interesting if *kanats* were integrated with systems of surface stream diversion, with some of the tunnels serving two functions, as it were. This last is the implication I read into Adams's article.

I will be grateful for confirmation or clarification of this point.

BERL GOLOMB

Center of Latin American Studies, University of California, Los Angeles

Golomb's inference is partly correct. The technique extensively applied in Iran for the construction of ground-water collectors also was applied in Khuzestan for surface diversion from the larger streams. I have entered and followed long-disused sections of major supply tunnels serving the Sassanian and early Islamic irrigation systems from their inlets along the Karkheh, Diz, and Karun river banks, and from the level of their beds it seems clear that these tunnels served as direct off-takes from the rivers themselves. How they were kept from being choked with silt under such circumstances is not entirely clear; presumably their gradients were great enough to prevent this.

On the other hand, I know of no evidence that these same major supply tunnels also were fed by branching networks of smaller tunnels serving as ground-water collectors. The straight parallel rows of surviving vent holes on the air photographs suggest, instead, that they were used simply as underground conduits. Elsewhere in the area, to be sure, there were smaller systems of tunnels serving the more usual purpose of collectors. For example, one of apparent Sassanian date lay along the north slope of a low ridge north of the Shaur River (see Fig. 5 of the article).

With regard to the contemporary use of *kanats* in the area, I have no first-hand information.

12 MeV 2-stage Tandem (Model EN) 1957

**1961 17.5 MeV 3-stage Tandem (Model EN)
with 5 MeV negative ion injector**

1962 21.5 MeV 3-stage Tandem (Model FN)

an evolution
in particle
accelerator
systems

1967 20 MeV 2-stage Tandem (Model MP)

THE TANDEM *Van de Graaff*®

The business of making particle accelerators is characterized principally by change and adaptation. While data being taken from our original Tandem — built way back in 1957 — is earning a respected place in current scientific literature, we are engaged in a determined effort to design machines of even greater energy and precision, higher current and more versatility. (Our customers regard anything that works as a point of departure.)

The logical result of this activity has been a "second generation" of tandems now on order for several laboratories. Having accepted the elegant charge-exchange principle upon which Tandems depend for multiple acceleration stages, three-stage machines were inevitable and they, too, are in the works.

The sound development of accelerator systems, we believe, depends heavily on ideas flowing to us from the user. Our eagerness to listen, plus a willingness to invest a dime of every dollar in research, is a guarantee that every High Voltage Engineering accelerator will make an immediate and lasting contribution to the experimental program for which it is designed.

THE RESEARCH TANDEM —
A company-sponsored research and development facility devoted to increasing the energy, beam intensity, precision and reliability of particle accelerators.

Say, Comrade

Considering the difficulty of finding a theme acceptable to both governments, there is a certain logic in the choice of a story about Soviet and American scientists working together as the subject for a movie to be produced by Soviet and American film makers working together. Both governments can only agree that cooperation between the two countries is good, otherwise there would be no making the movie in the first place. And it is the official view of each government that its quarrel is not with the people of the other country, only with the other government.

The agreement to produce the film, signed earlier this year, is between Mosfilm Studio, located near Moscow, and Lester Cowan, an independent American producer. It calls for four starring roles, two to be played by Americans and two by Russians, with part of the film shot here and part in the Soviet Union. The film is to be distributed in both countries in identical versions, except for language dubbing to make it intelligible to both audiences. The movie is to be based on the novel *Meeting at a Far Meridian*, which is itself a kind of cooperative venture. The book was written by an American, Mitchell Wilson, but has found, in translation, its most appreciative readers in the Soviet Union.

In the book, an American physicist and a Soviet physicist, working independently on the same problem in cosmic ray physics, have come up with opposing conclusions. They know each other's work, it being in the open literature, and have great respect for each other's abilities. In fact, the American, from whose viewpoint the story is told, feels a kind of mystical identification with his Russian counterpart. Neither scientist, however, can explain the discrepancy. They are able to meet through an exchange program and they seek to settle their scientific differences. They also seek to understand each other as persons.

Mitchell Wilson never explores any really fundamental political issue, such as possible differences in motivation of the Soviet Union and the United States in promoting exchange. But he does have his two heroes work their way through misunderstandings that arise from differences in background, from different loyalties, and even from the different ways that they try to spare each other's feelings.

The book is based on a good idea and it offers a solution to the problem of a theme acceptable to both governments. Its value as a piece of literature, however, is something else again. There are also romantic entanglements, and if no character ever says, "Let me take you away from all this," the omission is more an indication of Mitchell Wilson's ability to avoid anything with political overtones than it is of his originality of style. This does not mean that there is no hope for the movie. After all, the merits of *The Brothers Karamazov* did not assure success when, with the aid of Yul Brynner, it was made into a movie, while *Gone with the Wind* improved considerably in the filming.

Soviet and American scientists have shown that they can get together to produce science. It remains to be seen whether Soviet and American actors and film makers can get together to produce art, or at least good Hollywood fare. If they succeed on either level, the next step is clear. Like Richard Bissell writing the musical "Say, Darling" about the production of his earlier musical "The Pajama Game," the next step can be a movie about producing a movie on an exchange basis, to be titled, perhaps, "Say, Comrade."—J.T.

256 channels • 400 channels • 4096 channels — pulse analyzers from TMC

Whatever the pulse analyzer requirement — versatility, compactness, economy, large capacity — there is now a TMC analyzer to meet that requirement.

VERSATILE 256-channel CN-110 with choice of seven interchangeable logic plug-ins, transistorized circuits.

COMPACT 400-channel, 36-pound 400 series pulse height analyzers.

LARGE CAPACITY 4096-channel CN-440 time-of-flight analyzer.

Details of each analyzer series are listed below.

The 400-channel "400 Series" Pulse Height Analyzers occupy little over a cubic foot of space and weigh just 36 lbs. All circuits are board-mounted and easily accessible from the sides. The Model 404 is a four-input unit; Model 401 is an economical single input version. Both have low level linear amplifiers . . . memory grouping of 4 groups (100 channels each) 2 groups (200 each) and 1 group . . . automatic or manual data transfer from half to half and even quarter to quarter within one half. 400 series analyzers can also be used in multiscaler operation. Specifications such as average dead time of 60 μ sec, and $\frac{1}{2}$ channel per day stability are typical.

Model 510 Typewriter Drive Unit

Model 500
Paper Tape Printer

Model 530 Computer Typewriter

ACCESSORIES:

Model 500 Paper Tape Printer; Model 510 Typewriter Drive Unit; Model 530 IBM Computer Typewriter; Model 550 Paper Tape Reader plus various readout control units. Also, auxiliary equipment such as the Model 561 Visual Readout Indicator; Model 566 5" Oscilloscope Display Unit; X-Y plotters, null detectors, and character printers are all available as 400 series accessories.

Model 561 Visual Readout Indicator

The CN-440 — 4096-channel Time-of-flight Analyzer. Channels can be arranged in 16 groups of 256, each group with its own amplifier and integral discriminator. Memory cycle time fixed at 16 μ sec . . . readout is by CRT display and punched tape built into the system as well as by auxiliary card punch, typewriter, printer and magnetic tape units.

The CN-110 — a 256-channel, all-transistor, digital computer with CRT display and switch-selected binary, decimal and analog readout. Simply change one logic unit for another of the seven interchangeable plug-ins and you change the system — in seconds. Types of logic available:

PULSE HEIGHT ANALYZER (#210) — built-in linear amplifier . . . coincidence gating . . . 5×10^4 cps . . . 42 μ sec. ave. dead time.

TIME-OF-FLIGHT ANALYZER (#211) 9 channel widths — 0.25 to 64 μ sec. . . dead time 16 μ sec . . . 4 switch-selected types of delay.

PULSE HEIGHT ANALYZER (#213) 4 inputs . . . coinc./anti-coinc. gating . . . 42 μ sec. ave. dead time.

COINCIDENCE PAIR SPECTROMETER (#216) — 2 dimensional (16 x 16) analyses . . . dead time fixed, 100 μ sec.

PULSED NEUTRON; MASS SPECTROMETER and MULTISCALER units are also available.

Model 220 Data Output Unit

Model 221 Magnetic Tape Buffer Storage Unit

ACCESSORIES:

The Model 200 Data Output Unit — handles digital output, serves as a live timer, true timer and analysis cycle counter. Model 221 Magnetic Tape Buffer Storage Unit — provides high-speed storage of data for later playback. Model 8276 Binary Information Indicator for visual indication of address and arithmetic information. Compatible Hewlett-Packard printer, Monroe Data-Log paper taper printers and tape printer and punch combinations are also available.

For complete system data, write for technical bulletins.

MACRO-CRYSTALLOGRAPHY WITH HONEYWELL

Expect outstanding macrophotography with your Honeywell equipment!

This specimen of an unusual Stibnite crystal has been lighted with Honeywell Strobolar electronic flash units and photographed with the Pentax H-1 camera, appropriately outfitted with Bellows Unit.

The electronic flash shown in the foreground is the 65-A. It is fitted with a Neutral Density Lens from the accessory kit of four interchangeable lenses. The 65-A is triggered by the camera shutter, and its light synchronously triggers the other light source, which is a Modeling Slave Strobolar, model 52-A.

The crystal photograph was made with the 55mm, f/2.2 Takumar lens, standard on the Honeywell Pentax H-1 camera. The bellows unit is set 105 mm; aperture f/16.

Here is a versatile laboratory photography setup consisting of highest quality components. Yet the total price for the complete setup is only \$302.60, plus light stands.

Write today for literature on this equipment to David Moore, Mail Station 209, Honeywell, Heiland Division, Denver 10, Colorado.

FROM JELLY JARS TO EPITAXIAL LAYERS...

*new IR-5A spectrophotometer offers
precise infrared analysis at low cost!*

To check composition of lining material in jar lids, a jelly manufacturer uses the IR-5A to identify material as vinyl chloride-acetate copolymer.

Precision analysis and sampling versatility are now combined in one low-cost infrared spectrophotometer—the Beckman® IR-5A. This rugged laboratory workhorse is used in an ever-increasing number of applications ranging from the food quality control analysis above to thickness measurements of epitaxial semi-conductor layers. In the chemical and petroleum industries and in nearly every other field, the Beckman IR-5A is relied upon for widely diverse studies and applications. A few examples:

FOOD RESEARCH: Identification and study of flavor components, packaging materials, and insecticide residues

MEDICINE: Identification of drugs, characterization of renal calculi, analysis of D₂O in body fluid

EDUCATION: Instruction in instrumentation; identification of unknowns in organic chemistry courses; laboratory studies in graduate research programs

AERO-SPACE TECHNOLOGY: Measurement of trace contaminants in breathing and propellant oxygen

PHARMACEUTICALS: Quality control of formulations; research into new chemical structures

AGRICULTURE: Research on new compounds that show promise as herbicides, weedicides, or pesticides

MINERALS: Identification of precious and semi-precious gems; hydration studies in ores and cements

PAPER: Identification and measurement of polymer coatings on papers

PAINT: Identification of constituents of paints and coatings

These are only a few of countless applications in many fields. For details about your own needs, contact your nearest Beckman sales office. Ask about the IR-5A with NaCl optics for the 2-16 micron range, or the CsBr version for the 11-35 micron region. Both feature dual speeds, single- or double-beam operation, and integral plug for external recorder. Or write Beckman for Data File 38-24-02.

This new AAAS symposium volume represents a systematic effort on the part of American scientists, many of them of Chinese origin, to give a clear, unified account of material gleaned from about 250,000 pages of scientific journals and books published in Continental China.

Until now, information about science and scientific development under Communist control has not been available to Western scientists because of the language barrier, and because so few copies of relevant books and journals have been available.

This volume presents a heretofore unavailable opportunity to assess a decade of science in Communist China.

Price: \$14.00* (\$12, prepaid, for AAAS members)

* If you are not a member of the AAAS, you may join now, and order this volume at the special member price. Enclose \$8.50 dues for your first year of membership, along with payment for the volume.

Individual membership in the AAAS offers many benefits in addition to savings on AAAS volumes. It includes **Science**, and the quarterly **AAAS Bulletin**.

EFFICIENT GENTLE CONCENTRATION OF Protein Solutions THE ULTRA FILTER

Gently, simply concentrates even solutions that would be altered by heating, freezing, or prolonged exposure to room temperature. Ionic concentration remains constant throughout the run. The Ultrafilter consists of a dialysis membrane supported by Nylon framework which is evacuated and submerged in liquid. High filtration speed (up to 14 ml/h) and large internal volume (30ml) make this a valuable laboratory tool. Withstands autoclaving at 125° C. Available from LKB or leading laboratory supply houses in the U. S. and Canada.

Ecological Soc. of America. (W. W.

The ROCKLAND FORUM

A QUESTION FOR INVESTIGATORS:

What is your idea of an ideal dog diet?

• Suppose you had tried various dog diets, but they were not satisfactory. One diet fell short in one area. Others fell short in other areas. Each diet had its strong points, but every-one had some shortcomings.

Let's theorize further. Suppose that you have been given the assignment of formulating one dog diet that will eliminate the problems caused by these shortcomings. A dog diet developed especially to help the dog withstand the stresses and demands of biological research.

• Possibly your first consideration would be to provide an adequate dietary regimen. But equally important is the selection of dietary components with known origin and constant composition. As you know, only with constant uniformity can experiments be conducted day after day, week after week, and month after month with a minimum of variation.

Another consideration is that the ingredients selected provide a balanced diet. Can they be scientifically compounded to meet such exacting requirements and demands of biological research as pre-conditioning, post-operative and convalescing stress?

Still another consideration is: palatability. The best formula possible cannot attain maximum effectiveness if feed intake varies. So you want to take extra steps to insure that your dog diet possesses this most influential factor.

• Now you have established a "profile" of the dog diet you would like. We suggest you compare ROCKLAND DOG DIET with your idea of an ideal dog diet. We're sure you'll agree with other investigators in leading biological research laboratories all over the country...when analyzed and compared point for point, ROCKLAND DOG DIET has no peer.

For further information on how ROCKLAND DOG DIET can contribute greatly to laboratory productivity and efficiency, see your Rockland Dealer, or write: A. E. Staley Mfg. Co., Rockland Diets, Decatur, Illinois.

Other Rockland Diets include:

RAT DIET (complete) • LABORATORY PRIMATE DIET • RAT DIET (D-Free) • GUINEA PIG DIET • MOUSE DIET • RABBIT DIET • MOUSE BREEDER DIET • MONKEY DIET

Rockland Diets are available throughout the world through Staley International—Cable: STACOR

FREE

TO ANALYTICAL CHEMISTS

Try the Finest!

To acquaint you with S&S Analytical Filter Papers, we invite analytical chemists to mail the coupon below for a free sampler made up of several grades.

As an analytical chemist, you know that precise chemical analysis requires filter paper of the proper quality and density.

For those who demand only the finest working tools, S&S Filter Papers offer these advantages:

1. **Standardization**, for consistent accuracy — complete physical uniformity.
2. **Selection**, for more precise analysis — a wide range of types from which to choose.

Make your own tests! Send for your S&S Filter Paper Sampler!

S&S MEMBRANE FILTERS

S&S Ultraflex Membrane filters for filtration of liquids and gasses have extremely uniform micropore structure. Pore sizes of different filter types range from 5 millimicrons to about 10 microns.

Mail coupon for FREE Sampler and Membrane Filter Bulletin

We invite your consideration of the following items:

NEW SARTORIUS BALANCES

A full line of new and redesigned analytical balances is the exciting news from the famous Sartorius Works. One new series—Series 2600—employs substitution weighing and is offered in five models. Below is a capsule description of one model. Ask us for complete details.

H-2430 Sartorius model 2601. Single pan, projection type. This model offers maximum speed and modest sensitivity. Values up to 10 grams are automatically projected on screen. Capacity is 200 grams with ± 1 mg. accuracy (other models down to ± 0.01 mg.).

Each **\$810.00**

T-LINE STIRRERS

We can suit your needs to a "T" with our T-Line Stirrers. There are 7 models from which to choose. Shown here is the popular Model 101, a variable speed unit.

H-59995 Model 101. Dial rheostat delivers speeds to 5000 r.p.m. Compact, only 8" high. Powerful enough to agitate 5 gal. of water. Has quiet duty 1/100 H.P. motor. Attractive gray Hammett and black enamel finish. With 6" st. steel support rod. For 115 volts.

Each **\$34.00**

H-60005 St. steel stirrer rod, 10", 3-bladed, for above **\$1.75**
