MINIFLOW  
MICROPUMP

The MiniFlow is an all-glass metering pump, capable of working against a head of up to 4 atmospheres (60 lbs/m<sup>2</sup>) at 4-60 ml/hr or with high-speed model, 12-180 ml/hr—a range of flow rates normally encountered in column chromatography.

The alternately-acting twin syringes, driven by a linear cam and powered by a synchronous motor, ensure a flow virtually free from pulsation. Exchangeable gears permit easy selection of feed rate.

The MiniFlow Micropump is the natural complement to any liquid-phase chromatography system containing a column, a photometric analyzer and a fraction collector. Holds eluant flow constant irrespective of swelling of the column filling. Time and volume on the recorder chart become equivalents and overflow caused by mains voltage failure is eliminated.

For complete details on the LKB Micropump request bulletin 4500S6.

*new  
versatility in  
gas chromatography with  
temperature programming*

Reduce analysis time...improve peak height sensitivity...insure complete analysis...make columns more versatile...all with the new Beckman ThermotraC\* Temperature Programmer. Linear, non-linear, and step function programming—all on the same instrument, in the same or successive gas chromatograph runs. Rate-to-rate switching is not required.

ThermotraC is simple to operate. Plot the program with ink, pencil or black tape on the Mylar format sheet, insert, set zero and span. Optical follower changes column temperature as plotted. Programs are reproducible, and any 60-minute or shorter cycle can be plotted. Rapid temperature rise, cooling, and equilibration characteristics minimize operator effort. Simultaneous programming of sample and reference columns insures base line stability, while solid-state electronics permit proportional temperature control, maintaining temperatures to  $\pm 0.1^\circ\text{C}$  through  $350^\circ\text{C}$ . Designed for direct use with Beckman GC-2 and GC-2A Gas Chromatographs, the ThermotraC is adaptable to virtually any laboratory gas chromatograph.

For full information, see your Beckman laboratory apparatus dealer, or write for Data File 38-25-04.

NEW HONEYWELL INSTRUMENT LETS YOU

# SPOT CHECK HUMIDITY ANYWHERE

MODEL W611  
**\$263<sup>60</sup>**  
complete with  
leather carrying  
case, six sensors

## DIRECT READ-OUT INSTRUMENT ACCURATE TO 1% RH

Honeywell's new portable relative humidity read-out instrument gives you accurate temperature-compensated RH readings directly from a dial face. Senses and indicates changes with accuracies to 1% RH. Provides an overall humidity range of 10 to 100%. This range, divided into the most commonly used spans, gives you complete coverage for most checking purposes. Compares in accuracy to a sling psychrometer. Self-contained power unit operates on mercury batteries. (No extension cords, truly portable.) Delivers approximately 100 hours of service, enough for thousands of readings, before batteries need replacing. Weight, 4¾ lbs.; size, 8" high x 6½" wide x 5" deep.

Honeywell Model W611, at \$263.60 comes complete with a full range of relative humidity sensors and deluxe leather carrying case. F.O.B. Minneapolis.

#### A QUANTITATIVE METHOD FOR STUDYING CELLS IN BLOOD

Report describes a unique method for isolating tumour cells from erythrocytes and polymorph leucocytes. Polymorphs are allowed to ingest iron and are removed with a magnet; erythrocytes are lysed with saponin and residual cells are washed onto a Millipore filter. The cells are then concentrated on the filter and stained with eosin and haematoxylin, cleared and mounted. Authors conclude that this procedure is both reliable and quantitative.

Kuper, S.W. et al, 1961  
The Lancet  
April 22, pp. 852-853

Millipore® filters are available in eleven pore-size grades from 5  $\mu$  down to 10  $\mu$ . They retain on their surfaces all particles larger than rated pore size.
