Sales: RICHARD L. CHARLES and ROBERT S. BUGBEE (New York, N.Y., PE 6-1858); C. RICH-ARD CALLIS (Old Bridge, N.J., CL 4-3680); HERBERT BURKLUND (Chicago, III., DE 7-4973); ED BIG (Monterey Park, Calif., CU 3-8600)

SCIENCE, now combined with THE SCIENTIF-IC MONTHLY, is published each Friday by the American Association for the Advancement of Science at National Publishing Company, Washington, D.C. SCIENCE is indexed in the Reader's Guide to Periodical Literature.

Editorial correspondence should be addressed to SCIENCE, 1515 Massachusetts Ave., NW, Washington 5, D.C. Manuscripts should be typed with double spacing and submitted in triplicate. The AAAS assumes no responsibility for the safety of manuscripts. Opinions expressed by authors are their own and do not necessarily reflect the opinions of the AAAS or the institutions with which the authors are affiliated. For detailed suggestions on the preparation of manuscripts, see Science 125, 16 (4 Jan. 1957).

Advertising correspondence should be addressed to SCIENCE, Room 1740, 11 West 42 St., New York 36, N.Y.

Change of address notification should be sent to 1515 Massachusetts Ave., NW, Washington 5, D.C., 4 weeks in advance. Furnish an address label from a recent issue. Give both old and new addresses, including zone numbers.

Annual subscriptions: \$8.50; foreign postage. \$1.50; Canadian postage, 75¢. Single copies, 35¢. School year subscriptions: 9 months, \$7.00; 10 months, \$7.50. Cable address: Advancesci, Washington.

Stability and Change

Over the past 15 years it has been emerging with increasing clarity and force that the communication of information is as centrally important in nature as it is between men.

When a virus invades a cell it introduces a packet of chemically coded genetic information, so unambiguous and dictatorial that it may completely reorganize the previous contents of the cell in strict accordance with the imported message. When the cells of an organism divide, the continuing genetic integrity of the whole depends upon the essentially errorless transmission of the information coded onto the DNA molecules. The capacity of an organism to recognize itself depends upon immunological messages which we do not now understand in any detail, but which are certainly both intricate and precise.

Over the very long haul nature requires, for the evolutionary process, that infrequent slips occur. The mutated messages almost always turn out to contain useless misspellings which nature wisely discards. Only once in a very great while is a good new word formed.

In his lovely book, *The Ideas of Biology*, John Tyler Bonner has suggested that the reason why nature utilizes the nucleic acids in the storing and transmission of information is that they are chemically stable and hence cause "relatively few errors or changes."

Man seems to be much more careless about preserving the integrity of his inter-communication. Lawyers, especially in their terms of art, and scientists, in their use of a precise and well-defined vocabulary, appear to be the chief guardians of verbal and syntactical stability. For all others, the modern idea seems to be that "language is a living, growing, thing"; and growth in all directions, including downwards toward the low level of the street, apparently seems entirely acceptable to many.

One must grant that language is alive and evolving. Human words should change occasionally, but I think that at the best these mutations are the result of the radiant effect of poetic imagination or the responses to new necessities. It does seem reasonable to hope that new words should not be accredited merely because they are used by substantial numbers of careless, lazy, or ignorant persons.

Indeed, should we not protest in general against current trends towards more and more sloppiness with words and with grammar?

I want to make a plea for the older editions of Fowler's *English* Usage; for Strunk's *The Elements of Style*; for the continued use of the subjunctive mood; for the universal use of a comma before the final "and" in a series of listed items; and for all those similar rules of established grammatical virtue which have of late been scorned by so many.

I would enjoy adding comments about the newly revised Webster. But Science must be sent through the mail.—WARREN WEAVER, Alfred P. Sloan Foundation, Rockefeller Center, New York.
